Been there, tried that. The module seems to support it, but the hitch is in the base unit (the stuff immediately behind the faceplate). I played with the diodes in the modules and was able to get quite a wide range of bands, but none were for above or below 50-54.

I suspect a new program in the main board CPU would be needed, but I have no idea as to how to go about it...

My friend Francis Fong (AH6-CJ) is trying to interface two (2) Motorola VHF Mobile Mitrek units for repeater use. Anyone with experience with this equipment and some recommendations would be appreciated. Since this is my first experience posting a newsgroup subject I may have trouble getting back to check on any answers given so I will include my E-Mail address. 73's Dale Wyatt (KH6-JJJ)

OK, I'll bite. The FCC assigned me KE3IV when I upgraded to Advanced. I kind liked the 3 roman numeral 4 (IV) combination so I kept it when I upgraded to Extra. 'Round about late November I decided to see if I could shorten the call, and put in for K3IV, which was granted. Since I'm now in 5 land, the call is K3IV/5, which has been pointed out to me reads as K-3-4-5!

I only put in for one additional choice, W5IX, because I liked the combination of 5 Six and 9. Someone in the Austin area got that one...

Looking for new soft case for a Kenwood TH-225A with MPB-2 (12 v. 800 mh) big battery. Anybody know of a dealer who has one in stock, etc.? My 4+ year-old radio still looks new and I want to keep it that way!

Please e-mail reply.

Because frankly, the FCC can't discriminate based on national origin, and that's precisely what you would have the FCC doing if it charged money for reciprocal licensure based on how much a U.S. amateur would pay in that country. I might also point out that most countries require reciprocal permitees & licensees to pay a fee. Besides, this country doesn't charge for example someone from Mexico, who takes an amateur exam and gets a U.S. license, are you going to advocate charging foreign nationals with U.S. licenses on the same basis? -art clemons-

Bob,

A problem such as you describe is most commonly due to a problem with
your DISPLAY DRIVER. I expect you did not replace the display driver
when you reinstalled Windows, merely used the existing driver ...

Try going into the Windows Setup, Options, Change Windows Settings and
select VGA. When prompted, select "replace driver" (or the equivalent)
to load a new VGA driver and then restart Windows. After that, go
through the process AGAIN to re-select your video card specific driver
(at whatever HIGHER resolution/color depth you prefer) ... AGAIN ...
you must *NOT* select "use existing driver" when asked but load (and
expand) a fresh copy of the display driver and appropriate fonts from
the original distribution disks.

The boxes/fonts/graphics in LogWindows are all greated by the Windows
GDI (Graphics Display Interface) and not generated. per se, by LogWin
itself.

Well, my new call is a LEGACY callsign, versus a 'vanity callsign.
<g> It was my dad's call from back in the 50's and 60's.

Even at that, I was concerned about picking it up. Would his
old friends (my friends, too) approve -- object? That was a
concern for me.

Turns out they were more enthusiastic than me about it, perhaps.

Ya gotta believe that when the vanity gates are 'done with', they'll
have the Gettysburg computer system (or, the civilian outsourced
system) issue these calls in 'normal rotation' according to
the 'appropriate class' of license, anyway.

HUH????
The above advise is totally wrong.
Where did this idea that FCC jurisdiction ends at 12 miles out come
from? The ITU and other regulatory bodies have long ruled otherwise.

If you are operating on the high seas, you are bound by the radio
regulations and jurisdictional authority of the country of registry of
that ship.

In other words, if you are aboard a vessel of the United States,
you are bound by FCC regulations anywhere in the world EXCEPT
within the territorial waters or a port of a foreign country.

If you plan to operate on a Carnival Cruise Line ship, several
problems come into play: You must obtain operating permission
from the Master of the ship and you may have to obtain a reciprocal
license from the country of registry of that ship. No Carnival ships
are registered within the United States - they fly the flag of Panama,
Liberia, Cayman Islands, Bahamas, etc.

In effect, a ship remains part of the territory of its country of
registry.

1136. REVIEW: SHORTWAVE RECEIVERS PAST & PRESENT, Osterman 1997

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-15 00:00:00 UTC
From: mc@shore.net
Message-ID: <5biipe$ol1@northshore.shore.net>
Source record: 207151
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc

REVIEW: Shortwave Receivers Past & Present, 2nd Edition, Fred Osterman

This guide covers communications receivers from 1945 to 1996 and details information on over 500 table-top models. The radios it deals with are not ordinary table broadcast units but specialized pieces of equipment made for amateurs, short-wave listeners, military and government customers. Many of the older receivers are highly sought after by collectors, hobbyists and hams who are interested in "Boatanchors", a term of endearment for older, tube-based (and consequently heavy!) equipment.

Initially there is information on buying a used receiver, restoration and repair, a bibliography of periodicals, publications, clubs and on-line resources on the subject as well as an explanation on how to use the guide. Each manufacturer is given a chapter. A short discussion about the company, its logo, addresses and other general information follows. Each model is generally given a half-page with just about everything you'd want to know about the radio short of having the manual. Just some of the listings include features, specifications, circuit compliment (tubes and their function where applicable), accessories, comments, variants, where and when made, voltages, a neat symbol that indicates the type of frequency readout used, size, weight, etc. There is information of interest to collectors too, such as an estimate of rarity, new price and a general price range of current prices. The guide even has a section of radios that never were such as the Hallicrafters SX-112 and others!

Also included are the "dream" receivers - high-end equipment that most of us will never see - with names like Watkins-Johnson, Rohde & Schwarz, Harris, Racal, etc. Its nice to look at the pictures and enjoy the descriptions.....

Shortwave Receivers Past & Present is very well illustrated and produced. The author really knows his receivers, choosing models that are of major interests to hobbyists. As an example of this, Osterman has included certain military receivers such as the Collins R-390/URR and its younger brother the R-390A/URR because they are of great interest to hobbyists. Also included are the sought-after Collins 'A' and 'S' line receivers. In addition, some rare and virtually unknown receivers such as the DAVCO DR-30 and the Mosley CM-1 are included. Many of the receivers listed are from other countries. Nineteen pages is devoted to Eddystone which is a well-known British manufacturer. I found the price information pretty consistant with what I've seen on the Net and at some flea markets. A nice touch is that the author quoted a few of the

radios' values in Japanese Yen as well! Japanese enthusiasts are well known at larger US hamfests for buying up nice clean Collins and other American-made radios.

This guide is a very complete collection of equipment from all over the world and should be of great interest to anyone interested in radio receiving equipment. It is available from the publisher.

This is all fine but real-life experience is always better than text-book theory. I have found, through extensive testing, that the paint color must match the color of the sky directly over the antenna installation on 4/1 each year. I have taken pictures and brought them to an auto body paint shop to have the paint color matched exactly. I repaint the coax every year in the spring and it also gives me a change to check out any damage due to the winter. This year I am going to try an air brushed design similar to the Windows 95 clouds scene but I may experience interference due to the moisture contained in the clouds or even static electricity - definitely a worthy experiment. If you are really into fine tuning your impedance match to the sky be sure to paint your tuner/transmatch.

Look for more tips in the April issue of QST.

If the FCC wanted to hammer CB bootleggers badly enough, they would do so using existing laws. I can assure you, the fellow who runs 1500 watts on 27 MHz will not peform a routine station evaluation. The FCC would not find this to be a "magic bullet" that suddenly gave them enforcement ability that they lacked before.

From what I have been told by a contact at one of the Field Offices, the FCC would LOVE to go after more rules violators. Although pressed for resources (they are covering a LOT more ground than they did 20 years ago, with new technologies and services, with essentially the same, or less, staff), they could find time to go after a few "examples." When they do, however, and issue the NALs, the Justice Department usually declines to prosecute, concentrating on million-dollar drug dealers, I suppose. It would only take a few of these things to convince me that I had better things to do with my time. :-)

Check the Longwave Home Page at
http://members.aol.com/lwcanews/index.html

The beacons you are hearing are non-directional aeronautical and marine
beacons; probably all originating in the US and Canada despite their
strange call signs. Besides those, a few of us "LowFERs" operate low
frequency experimental beacons under FCC Part 15 rules in the 160-190
kHz range with 1 watt input and antennas less than 15 meters long. They
can be heard at fairly great distances under the right conditions.

>Now if I were to use CW with a brick on the key, granted those wires
>will get little toasty even though #8 wire is rated at 73 amps
>countinous current in individual runs.

#8 bare copper is rated at 73 amps in *free air*. Insulated wire
in a confined space, IE a conduit or wiring channel (as the orginal
questioner said he was going to run it), is rated at 46 amps continous.
But that rating is the current for which the wire won't exceed 100 degrees
Celsus. Now that's the temperature of boiling water, and I don't suggest
running thermoplastic insulated wire that hot for long periods. The
insulation will get brittle, and you'll wind up with a short and a fire.

Because of the duty cycle of your HF amp, you're only drawing an average
current of about 10 amps, so #8 is fine for your use. What we should be
more concerned about is voltage drop in a mobile setup. For a continous
load, using #4 is the right way to deal with that. For a load which only
needs a transient high current, such as your amp, the capacitor can deal
with peak demands.

>I use a 1 Farad cap to keep the voltage up to 13.6. The cap is located
>only a few inches from the amp and has the same basicly the same
>effect as mounting a battery in the same location.

Well not quite, but for supplying energy during brief voice peaks,
it does keep the voltage from sagging much, and is a good solution
for your installation. It doesn't help at all for a continous load.

>Using the 8 to 1 comparison it still runs cool.

You bet, and that's *why* it runs cool. Your time averaged draw is
only about 10 amps.

BTW, the Panasonic 1 farad capacitor I mentioned above wouldn't be
a good choice for your installation. It has too high an internal
impedance to supply the peak current demand of your amp (though it
is great for supplying microamps to keep a memory alive for weeks).
The beer can size units have a low enough internal impedance to work.
(And don't ever short a charged one, the fireworks are spectacular.)

You won't make much money charging for reciprocal tickets. Most hams that operate in the U.S. once just get a U.S. call and then keep it for a souvenir. The FCC should start charging a yearly fee for ALL licenses, just like they do in Japan (that little place with millions of no-code HF hams). It's not worth the paperwork to charge anybody a dollar, lets make it $150 a year for everybody.

While it is possible that some ham with modest HF test equipment will stumble across something "cutting-edge" in his or her basement, it is really unlikely, IMHO. This probably hasn't happened since Marconi. Technology has advanced to the point where almost all "cutting edge" technology will require a rather sophisticated knife. In recent years, any amateur advances in state of the art, such as the digital Clover mode, have been made by those with a vested commercial interest.

Hams will continue to do what have have done best for decades (better than a lot of commercial activity, IMHO) : they will adapt existing technology to amateur needs, usually making it significantly less expensive in the process. This has always been a valuable contribution, and it represents the real effect of the "self-educated technical pool" that is found in Amateur Radio.

I'm new to this ham hobby, so please excuse me if I seem ignorant:-). I see and read a lot of references to the Military Affiliate Radio System (MARS) on the 'net and in various ham publications. What exactly is the mission of the MARS system, how is it funded and manned, and what is it's relationship with amateur radio? I live and work on Fort Hood, Texas and regularly drive by the installation MARS station - impressive antenna setup - but I have no idea what it is there for (except to pass MARSgrams during the holiday season!). Thanks in advance!

Hi All,

While in Brazil a few years back (as PY1ZFF), I was introduced to a concoction called "ProPago". This stuff came in a 2 liter can similar to a paint can ... but with a bottle type neck top and a big cap (looked a little like an overgrown toss-out bottle of "Point Special Red"). One applied the stuff with a brush to his antennas, tower, coax, matchbox, rig. etc. If you had any left over after the "painting",you were supposed to drink the remainder of the stuff and then wait about 30 minutes, letting nature take its course. Then the label said to "apply the discharge to a small area around your ground rod." (sounds more like "Point Special" now!!) When the can was empty, it could be used as a "dummy load" (only, of course, if the dummy wasn't already loaded)

807's forever!

1152. Vanity Calls temporarily on hold

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-16 00:00:00 UTC
From: Phil Sussman <pactor@pactor.com>
Message-ID: <32DEF41C.1755@pactor.com>
Source record: 206967

Hello all,

I received a call today that all pending Vanity Call applications have been placed on 'hold'. Supposedly this is to allow a 30 day window for some previous applications that were inadvertantly rejected as 'no call available' to be refiled.

I have not been able to verify the validity of this information; however, it was relayed to me by a Vanity call applicant who spoke to the FCC this afternoon, 1/16/97, at 3:00pm ET.

Can anyone provide further verification?

This is a public service posting. It may or may not be relevant to the subject of your news group but it may be of significant interest to
the readers of your newsgroup.

Flash!

The Department of Justice under the direction of US Attorney General Janet Reno and the Office of the Attorney General for the
State of California under the direction of Daniel Lungren are investigating the following credit card companies for falsifying billing
statements: If you ever made a partial payment on your credit card and had them charge a late payment fee you may want to contact
these offices about participation in the conviction of these companies for racketeering by furnishing information about false billing
practices.

First USA Bank
PO Box 740085
Atlanta, GA 30374-0085

First USA Bank
PO Box 8650
Wilmington, DE 19899-8650

AARP Bank One Columbus, NA
PO Box 182153
Columbus, OH 43218-2153

AT&T Universal Card
PO Box 9999
Columbus, GA 31977-0001

Capital One
PO Box 85617
Richmond, VA 23276-0001

Choice Visa
Box 6248
Sioux Falls, SD 5117

Discover Card Services
PO Box 29212
Phoenix, AZ 85038-9312

P. O. Box 4635
Atlanta, GA 30302

Wachovia Bank Card Services
P. O. Box 15515
Wilmington, DE 19886-5515

Check your billing statements closely. If you have been charged a late fee even though your payment was mailed prior to the due
date you should report it to your state attorney general. If your finance charges are being listed as purchases you should contact your
state attorney general. If your credit card company is unable to funish a copy of a signed billing receipt you should notify your state
attorney general.

All the events described above could make you a party to a class action suit against your credit card company where you could
collect up to ten times the amounts you were falsely charged.

For more information contact your state attorney generals office.

Or me, who continues to DX from time to time, but will probably never
seek the award.

What Gary is saying here, though, is that we all quickly associate ARRL
with DXCC but don't associate ARRL with these "hi-tech" amateur modes. I
do indeed understand his point (but will save that for a discussion with
WA6VSE when I have the time).

I will point out that, from what I have seen, the DXCC types have built a
strong working relationship with their ARRL Division Director, in most
cases. They usually let their Director know in no uncertain terms, and
usually without being insultive or destructive, what their needs are and
what they believe ARRL should do.

>It just seems alot like racism.

Don't let it discourage you, Eric. Don't forget that, much like in racism, it is only the few who will stand up at the public meeting, or on the street corner when they are surrounded by their buddies, and spout racial insults. The much greater number of people really don't care to become involved with that sort of thing one way or the other, perhaps regardless of what they may believe privately.

Most of the old-timer hams I know will not say some of the things you have seen some old-timer hams say on this forum. They may have their reservations about the no-code license, but will probably encourage you to upgrade, and will probably offer you some help. Even those who are somewhat "opinionated" will usually soften quickly to the enthusiastic newcomer, even if he or she believes that Morse Code is for the birds.

Most of the new hams I have met do not run around to all of the old-timers, calling them "old phartz" and warning them that someday they will rule this roost. Many new hams do not believe that Morse Code testing should be required, but, of those, many learn it anyway, just to upgrade (and a few of them learn that they like it.) Most of the new hams I have met have conducted themselves with great dignity and pride and have been accepted by the old-timers because of it.

I can't promise there will be no prejudice against you at all as a no-code Tech. I can't even promise that all the old timers will keep any misgivings they may have to themselves. I can promise you that the "anti-no-code" sentiment in this world is expressed about an order of magnitude less in the real world than it is here. Most of us "old timers" are quite willing to give the newcomer a chance.

If you would like some free information on how to become a ham, call us toll-free at 888-277-5289 or obtain it through our Web page at http://www.arrl.org/.

Hi Eric,

Congrats and welcome.

On ham radio you can discuss anything you wish. It was suggested long
ago that
one might be better off avoiding the big 3, sex, religion and politics,
but hey
sometimes these aren't good subjects off air. <g>

In any case, with some discression, you can typically enjoy good
conversations
about anything imaginable.

Have fun.

Why two???One will do....the 145.45 Rptr in Houston TX is a MITREK in one box.....works great....there were some other ideas on the Land Mobile Radio remailer....check the call on 145.45 in Houston in the ARRL Rptr Directory and then you can call him in Houston or write to him on the Internet (use www.search.com to see if he has an email address...www.QRZ.com has the callsign lookup pgm and maybe his email address....damn, I USED to know Mark's call!)

Can help if you need more info!

1163. The conspircy of NTS and ARRL

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-16 00:00:00 UTC
From: Burt Fisher <burtfisher@geocities.com>
Message-ID: <32DEE058.70AD@geocities.com>
Source record: 206978

From: WA2RCB@N3ACL.#SEPA.PA.USA.NA
To : K1OIK@K1UGM.#EMA.MA.USA.NA

Hello again Burt! First, I want to thank you for your packet wit-o-cisims/bulletins. There needs to be a general "chill-out" in ham radio, as too many relegate it to sacred-cow status. (possibly because they have no life apart from ham radio....? Hmmmm)

I particularly like your Hambo/Fartmo bulletins, When I first read about ole fartmo I nearly gagged on the ginger ale I was drinking at the time, it was quite amusing for sure Burt!

Now, concerning the NTS activity, Burt, there is a true REASON why the ARRL still promotes NTS, a system which should have been obsoleted in the 70's when you think about it... Let's look at the name of the promoting organization first: "American Radio *Relay* League" (...sounds like something from the 20's eh...?) Now, what is the written and legally declared purpose of the ARRL Burt..? That's right...to *pass* message traffic! Now, consider carefully, this purpose for being is the *legal cornerstone* for the ARRL charter, which ESTABLISHES their TAX EXEMPT STATUS! (are the light bulbs starting to resonate in the visible-spectrum?) Think about it for a minute, If you were operating a multi-million dollar publishing company from within a 501-C Tax Exempt corporation, who's stated *legal* reason for *retaining* it's tax-exempt status is to pass messages via radio, would you want to do anything to threaten such an arrangement Burt...? No, you would do everything in your power to maintain the status-quo, and thus keep the cash POURING IN on a DAILY basis. (after all...we have to print all those $50 handbooks to tell people how to use NTS...)

Finally, remember Burt that whenever any Tax-Exempt/Non-Profit Corporation changes it's Charter, then then must re-submit the same to the IRS for THEM to determine if they still qualify for tax exemption. Why upset the apple kart when you have a good thing going already, and many many *suckers* (oops...hams, sorry) who will *volunteer* for NTS duty, and register to the ARRL for the same. Those registrations and traffic reports look good if the IRS comes thru the door you know...

Beginning to get the big picture Burt..? NTS is the tail that wags the dog, all the way to the bank, TAX FREE.

Al Capone is probably spinning in his grave Burt...

I sure hope you have a dedicated high output alternator with another
battery.
Drawing 50 A along with the rest of the vehicle's loads on
a stock charging system is just asking for trouble. Just because
an alternator is rated at 100 A doesn't mean it will deliver 100 A
for an hour. If you try this it will get REALLY hot, as it does
output current will drop due to the increased resistance in the stator
and the rotor windings.
Pretty soon junction temps will get critical and GAME OVER.
After this its time to buy a new alternator.

Later, Brett

1170. HamComm 3.0 "registration" by N9ZLE: a slap in my face!

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-16 00:00:00 UTC
From: schroeder.pad@sni.de
Message-ID: <5bkrfb$5j9@linus.pdb.sni.de>
Source record: 206985
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc,rec.radio.shortwave,uk.radio.amateur

Hello netlanders,
while looking around on the web i came to this very interesting place:

http://www.concentric.net/~n9zle/hc.html

where Bruce C. Raisley, N9ZLE, offers HamComm interfaces.
Near the end of this web page you can find the following line:

"Register (fix) program for HamComm 3.0 only Not a true registration!"

Here you can download a small program REGHC which

PATCHES THE SHAREWARE VERSION OF HAMCOMM 3.0 !!

If you run the program it displays the following message:

--
This program removes the Unreg screen when exiting
the HamComm program. It does not register it.
debugger created by... N9ZLE
The dirty deed has been done..............!
--

Being the author of the HamComm software i have to say
that i am not amused at all. Removing the reminder message
from the shareware program will definitely reduce the number
of registrations.

It seems Mr Raisley has forgotten that he can only sell
interfaces because of the countless hours of work me and other
shareware authors have invested to create affordable programs.

--

I just had to learn that the same has been done to HamComm 3.1
by a hacker group (*not* by N9ZLE, maybe it was too difficult).

As a consequence of these unpleasant events i have decided that
there will be
NO SHAREWARWE VERSION AFTER HAMCOMM 3.1

Any new features will only be available in the registered program.

Your call is not necessarily K3IV/5 `since' you're in 5 land. However,
you are certainly allowed to create a self-assigned indicator and to
add it after your call, so long as it does not conflict with ones
defined by the FCC or used as a call sign prefix by another country.
So if you like K3IV/5, you'll probably *love* K3IV/5VI7VIII9X :-)

QST ran an article on this a few years ago. The bottom line
was that the line became quite lossy above the 3.5 MHz band.

Baaaah, this is old news. Works along the logic of batteries, which --
under normal operating temperature -- give off more power than
theoretically is in them. Old laws of thermodynamics, that is all that
is with it....

Grin ... and some guys now will suspect, that the battery thing was a
goof ... hihihihihihihi... Read the basics of thermodynamics on how
batteries work and you will be amazed.

Hi Hal,
Nick K5BQJ
I know that many years ago we used Zip cord or lamp cord line for feedlines for dipoles. The Impeadence is about 73 ohms. and we did not use over 150 watts.
Hope this helps. 73

>Point is, Jeff, that nobody that I know of appointed you the newsgroup
>police.

Ever hear of "community watch" and "self-policing"?

>Many were posting to .misc ... not just me. You were, for some time, the
>singular
>voice who kept posting to .misc and trying to force the entire debate (that
>others had
>started and you were actually horning in on) to go to .policy.

No, I was not the only one. There was quite a large number of folks who
asked you to "take it to .policy."

"Horning in on"? I was here when .policy was created, Carl. Any OTers
on .policy will recall my pro-code + homebrew comments from years ago.

>> Carl's response
>> was an accusation that we were trying to "hide" the debate by relegating
>> it some obscure NG that few had access to (completely false).

> I didn't say "few have access" ...

You should peruse the archives in order to refresh your memory...

>I said it was my experience that
>policy was
>not carried as widely as .misc ... I suspect that's changed some, but I
>also suspect
>that .misc is still carried much more widely. And yes, I do believe the
>reason for
>trying to force the debate to .policy is to "bury" it ...

I suppose you also believe saying that all FS and WTB posts should be
placed on .swap is also some plot to bury such articles, and that the
creation of .antenna and .homebrew must have been some conspiracy to
bury said topics. You've got some kooky ideas.

>> Ignoring a NG's charter is akin to anarchy, and anarchy will distroy the
>> usefulness of a NG.

>Give me a break! This is USENET ... it's supposed to be free speech, not
>"Jeff doesn't want to talk about no-code (or have others hear
>about/participate in
>or (heaven forbid) *support* it ... so we have to bury it in an obscure
>corner."

Then why bother to have a usenet hierarchy? Let's recombine all the rec.radio groups back into a single group; instead of 10+ groups each averaging say 100 articles per day each, we can have 1000+ articles appear on here. In fact, continuing your line of reasoning let's combine the "Big 5" into a single group. 1,000,000+ articles per day - the epitomy of Carl's idea of free speech.

>If you think that having code/no-code debate threads in .misc is going to
>cause
>any consequential damage to anything, you've got some VERY wierd
>views on live and what's of consequence.

It's damaging my keyboard; the N-key is wearing out.

>Give it a rest and stop trying to tell others what to talk about (or where)
>..
>if you don't want to see/hear/read it, simply ignore it ...

I've always thought you engineers strived for efficiency, but you seem different. If the above is an indication of your work performance, I imagine your ployer is not entirely satisfied.

Sure, if your HT puts out 45 watts there are several "inside ant." that
you could use.
To get 30 miles I'd plan on nothing less than a 1/4 wave g.p on the roof
or if your mechanically inclined there are lots of plans for copper
water pipe J pole antennas that would work well for you.

Gee I hope your not trolling...

The only problem is that a log book is not proof that you didn't
operate at other times. It is only your word that can claim your
log book includes EVERY incident of transmission from your
location. Since there is no requirement to maintain
any log, there is, therefore, nothing about the
existence of your log that can substantiate your claim.
All your log book shows or otheriwise might establish
is that is the MINIMUM amount of time you have
operated.

1180. KD4DTS's Wish List For The Icom IC-706 Successor

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-16 00:00:00 UTC
From: jcwren@atlanta.com
Message-ID: <32df6a34.267283413@nntp.atlanta.com>
Source record: 207022

I just got off the phone with the folks at Icom technical support, who say that there's no such thing as a IC-708 (or whatever the successor to the IC-706 would be). I mentioned that there were a few changes I'd like to see to a newer radio, and ones I wish the 706 had. They said I should post my wish list to the net, and it would get passed on to the engineers.

Maybe this is all a little out of date, since the 706 is almost 2 years old, but I just got mine a month or so ago, and here are my impressions and my wish list.

Overall, I really like the radio. The size is a lot smaller than the Alinco DX-70 I was contemplating, plus with a little hard sell from HRO (telling me they have had several DX-70s come back with blown finals), I was convinced the 706 was what I needed (want, need, I don't really make a distinction!). Plus, the price difference was only about $125, so the extra bandwidth seemed like a low cost bonus. What I really wanted was a 6M radio, and the HF mobile was a good selling point. No darnn way was I going to lay out $1400 or so for a Kenwood TS-60, and only get 4 megahertz of bandwidth. (I paid $1189 for the 706).

The weakest point of the radio is the memory system. With a radio that supports this many bands, there ought to be a banked memory system. When I feel like working 40M, I'd really like to select a bank that has only 40M frequencies stored, and scan it. Same is true for 6M and 2M.

The scanning mode of the 706 is bassackwards from every one I've ever used before. Memories are not scanned by default, and have to be added to the list to scan. This confused me at first, and I had to check the manual (to Icoms credit, you *almost* don't need a manual for this radio). Normally, when you hit a frequency (say NOAA weather) that's up all the time, you press the skip button, scanning resumes, and you don't get that memory anymore. Doing it the 706 way is very awkward.

I love the fact that memories can be named. I wish that whenever the memory number was changed, that the memory name would appear, or at least briefly. I know they can do this because when you switch menus with the MENU key, words like "scan func" appear briefly in the display. Editing the name is straight forward, but if I wrote the code (and I'm a firmware engineer for a living), when you move to the next character I'd probably copy the last character to the new cursor position, rather than always starting from the SPACE character. (my adhoc studies show that the next character you're likely to use is

closer to the character you just entered). I'd also leave out some of the full ASCII character set. I'm not convinced that you really need more than the alphabet (upper and lower case! Don't change that!), the numbers, slash, underscore, hyphen, and ampersand.

The split function was a little confusing at first. I had to read the manual to understand the quick split operation (I didn't realize from playing with it that it was mode dependent (FM vs all others). It would be kind of neat if the quick split could be set on a per band (or at least HF, 6M, 2M) instead of globally. Also, a quick way to change the direction of the shift would be handy. To be honest though, I really only use 6M repeaters. 2M is mostly for listening to weather (which I can't seem to hear because of the filters, and I haven't made any modifications to the radio, yet).

If *I* was designed the radio (and maybe Icom will hire me after this posting so I can write radio firmware!), I'd have preferred to see the HF antenna port on it's own connector, and 6M and 2M combined (I'm sure you all know that HF and 6M share the same connector, and everything about 60Mhz is on the 2M connector). The reason I say this is you can use a 2M 5/8 on 6M and it works OK. Not the same gain as a Larsen 6M, but it works (and it's more broad banded than the 6M antenna).

If Icom does release a 706 successor, 10 watts on 2M and above isn't really going to cut it. In Texas or other flat land states, I've heard that 10 watts can work a huge distance. In Georgia (and other hilly terrain states), it isn't enough. Especially on 70cm. Unless the radio has more power, in most cases the successor wont replace the traditional dual-bander in most cars. I'd like to see a minimum of 25 watts on 2M and above, and preferrably 35. I'd also really hope that the radio covers 220Mhz. I've worked 220 somewhat, and enjoyed it. Plus, if we don't use it, we risk losing it.

One of the many nice features the 706 has is the auto-off function. Alas, it can only be set for 60 minutes at the max. I'd like be able to set that to 180 minutes. I used to have a Kenwood TM-741A tri-bander and one of the really cool features on that radio was that if a station had no activity after a preset amount of time, the radio would turn off. I know this is not practical as a HF (and maybe even 6M repeater mode) feature, but if the successor were to cover up to 450Mhz, this would be nice.

Another issue is the pre-amp. If the pre-amp isn't on, you can almost be assured that you won't hear it. With the attenuator on, it's like having a dummy load hooked to the antenna port. I'd like to see the sensitivity balanced where it behaves with the pre-amp off where it does with the pre-amp on. Also, the general coverage filter is somewhat in need of tuning. Gary, KE4ZV (the most prolific net poster in the known world), says he re-designed the filter using ARRL radio designer, but I've not seen it in the mod lists, nor have I seen posts of anyone claiming to have done it.

So far, it might sound like I don't like my 706. Not the case. It's a good solid performer with a lot of features, and it covers the bands I want to use (though I haven't tried it on 2M side band. I have a both a IC-275H and a IC-475H, and I may pull those out and run a comparison against the 275). Plus, this is a radio *made* for mobile use. Icom has done a heck of a design job packing these electronics in and making it work so well.

I'll mention the things I do like. The tuning steps are great. Frequencies can be changed by band, by megahertz, by kilohertz, 100's of hertz, and hertz. Very flexible. For a radio with one button to change the mode, can't beat it. Steps right through, it's smart enough to know to use USB above 10Mhz, and a press-and-hold changes it to LSB. The menus are pretty intuitive, though to be honest, I wouldn't mind pressing the menu key 7 times to step through them all, rather than grouping by M1-M4, S1-S2, and G1-G4. Volume has good drive, and for a small speaker, the sounds is pretty good (although I'd love to see a collaberation between Bose, Kenwood, Icom and Yaesu). The tuning knob has a drag adjustment, which is essential for mobile operation. Burying the one-time menu setups with a press-and-hold at power up is good. No accidental changes. The display is really nice. Very readable.

This about wraps it up, except for one pet peeve with *all* the radio manufacturers. The serial interface problem. I'd rather pay a few dollars more and have the volumes pots, et al go into a A/D, and do it digitally. EVERY DANG THING THE RADIO CAN DO SHOULD BE ABLE TO BE DONE FROM THE SERIAL PORT. Including turning the radio off (even on isn't tricky, considering most of the radios use a soft-on feature).

I've heard some people say the noise blanker doesn't work well. Mine seems to be fine. I'm not a heavy duty HF'er (check my license, I'm still only a lowly Tech+), so I may have missed some of the things the HF guys would say the radio needs to be better (I did compare the 706 to my FT-890AT, and the 890 smokes it. I haven't seen a radio yet that's better than the FT-890/FT-990/FT-1000 receivers. But hey! my 890 doesn't do 6M).

So, all in all? I want a 708. I think Icom can do it. These guys are great engineers. (I have 2 IC-W2A as talkies, and I wouldn't trade them yet. Haven't seen a HT I like more these. They're damn near bullet-proof. (Well, I'd kinda like to play with a Delta-1A)). I think they've done a great job with the 706, in spite of my comments above. I'd buy one again (though I should have waited until January. Now you get a free remote cable).

Oh and one more thing (yea, I know, You're thinking, "I'd wish this guy would end this. He sure can ramble"). I'd like to see more input from users into the final product. And maybe some better education of the pitfalls of designing radios from manufacturers. Sure, I know you can't have tiny, broad-banded, perfect selectivity, incredible sensitivity, high power, long batter life, and expect to

pay $200. Try and convince a lot of hams of that. But I'm not convinced about how much manufacturers listen to users. I've seen too many useless features and hard to use hardware to be convinced.

Give me the class of 8th graders who want to learn for 2 hours a week for 6 weeks (about how long it takes to advance a Scout beyond Tenderfoot) and the majority of them will pass their Advanced license (with Morse).

13 WPM Morse, if properly instructed, is no more a serious obstacle to obtaining an Advanced Class ham license than is the theory.

I agree that the current ham license exams are not reflective of a "professional level" of knowlege if by "professional level" you mean a graduate engineer or scientist. But then it is only an "amateur radio" license, not a "professional radio" license. Having said that, have you looked at the GROL questions? The questions for the professional license exam these days are about the same level technically as those given to obtain an Extra Class ham license. Your eighth graders could get their professional licenses, too.

I know hams who don't even do Morse code, yet still beep, every time they get paged. Since you don't go beep, you must be one of those who vibrates at about 1200 baud, instead. ;-)

Don't do it! The coax will email a message to Redmond, Wash. via the
sky-to-internet impedance match link. You will be charged with patent
infringement. You see, in connection with the Windows 95 screen,
Microsoft patented clouds. The penalty for infringement is $10,000 per
day per horizon-to-horizon view, plus attorney's fees.

God already owes them billions. :-)

Agreed ... the written tests are NOT "hard." Certainly not "professional
level."
> When Tech changed from a trickle

Agreed again ... code, not technical material, is the obstacle to new
blood.

>
> Most amateurs upgrading today skip General and go direct to Advanced.

> really want amateurs sharing the bands with you who can't do that?)

Hell, Gary ... most of the pro-coders don't want people on the bands that
are smarter than they are ... they just want people who can beep.

> Give me a class of 8th graders who want to learn for 2 hours a

I agree on this, too ... problem is again that most pro-coders don't
want a bunch of new hams that are smarter and know more about
radio than they do ... (but they have to beep)

> Now note very well that I do not suggest that the current Advanced

I agree on the test methodology ... an "open book" exam is fine. The
presence of the book will transform a dolt into an EE ... it is reasonable
to allow reference works for looking up information ... what we want is
people who KNOW HOW TO FIND THE ANSWER/SOLVE THE PROBLEM,
not people who simply parrot back something of which they have ZERO
understanding.

I would agree with the other two posts although I think the reference to satellite operation is misleading. Yes, 1 to 2 miles would be a good starting point. I think a very important issue is also your antenna. If your both using rubber duck antennas your results would be minimal. If you had a larger 5/8 wave telescoping antenna you'll get further. If you had some sort of portable 3 or 4 element beam you'll get even further, as far as 8 to 10 miles with no buildings in the way.

Also don't expect 7 watts from the HT when operating from a battery, it's more like 3 or 4 but as the other poster pointed out, the difference is negligible.

And its amazing how little the new media that survives on the use of scanner radios knows about legality and illegality of their use. Technically, these people in Florida have admitted to have violated the Communications Privacy Act of 1992 and 1993) (as revised), but the press has not seen fit to report that part. And it will be interesting to see -- if these people are charged under the Act -- it this will become the long awaited "test case" to prove or disprove the constitutionality of the Privacy Act.

Ill bet that the CTIA (Cellular Telecommunications Industry Association) is sitting on pins and needles over this one. They pushed the passage of the Privacy Act. They even tried to get ham radio autopatch calls included. Now, their "soul mate" Newt who worked hard

to get the bill passed has been stung -- but Newt is also a "political hot potato." So, where is all the raucous posturing of the CTIA today?

P-S: I'm a Republican saying all this!

I don't think this is true. As I recall the schematics there are a
couple of components that are different. A cap in the front end filter
and some jumper positions come to mind but I don't have the schematic
any more.

>interesting to try.

Choose a line length and frequency so that the line is about 1/4 wavelength long. Wind the line through a high-permeability (e.g. Fair-Rite or Amidon 70 series) ferrite toroid core about ten turns near one end of the line. Connect this end of the line to the analyzer. Connect a small trimpot to the far end. Adjust the trimpot until the measured impedance stays constant as you vary the frequency. The final value of the trimpot is the characteristic impedance of the line.

Lamp cord is pretty horribly lossy. This could probably also be measured with the analyzer, but I don't have time now to work out a detailed method, and it would only serve to confirm what a number of people have measured in the past.

Don't laugh too hard. About ten years ago while erecting a 17 site microwave network, we installed several 8 foot dishes on top of water tanks and then brought the waveguide to a shelter. The radios remained in the crates, awaiting approval of the electrical system from the county inspector. Two months later, our chief engineer received a call from some irate TV watcher who ranted and raved for the better part of a half an hour. He said that he'd logged every bit of the interference he'd received from our dishes over the last two weeks. Totally unflappable, our chief engineer told the guy that the radios hadn't been uncrated yet --would Mr Psychic freq like to visit the radio shelter to verify this fact? The answer was a click and a dialtone...

It has happened.

This simply amazes me. Mike and Jeff are attempting to blame all the
Usenet abuse on "anti-coders". Jeff uses Carl@ais.net as an example
of all anti-coders, too. I suppose I could pick one obnoxious pro-coder
and claim that all pro-coders behave that way, too, but that would
be as grossly misleading.

C'mon, children, there is a huge quantity of evidence that newsgroup
abuse has absolutely nothing to do with Morse code. Attempting to
create such a linkage is ridiculous. Anyone could spend a day or two
with Dejanews and see this.

> Ignoring a NG's charter is akin to anarchy, and anarchy will distroy the
> usefulness of a NG.

How true, Jeff. I suppose those dozen or two copies of the Usenet FAQ
you've received over the last 4 years have made some impression ;-).

Hulloo, there.

I'm a college student. I want to form a ham radio club. I need to =
convince the Dean of Students that one is necessary. Really, I just =
need to promote ham radio, to raise interest in it. Any suggestions for =
handouts?

Please email me directly; I don't subscribe to this list, and I'll post =
a summary.

God, you guys should know better. What if a newbie wanders in here and
takes all this stuff serious? Besides, every ham worth his weight in

6146's ought to know the quickest way to increase range is by going to a power supply with a higher current rating. I went from a 20 amp to 40 amp supply on my IC735, running into an R5, and made DXCC in 2 months.

What is more AMAZING is the fact the these people were
had the recorder running to get all of the conversation. AND
the fact that they are very active in the local Demo party. AND
they happen to give the tape to the ranking Demo member of the
ethics committee. I would suggest there is more to the story than
is being reveiled.

Subject: ARLB097 NTIA Report Bullish on Additional HF Allocations for Amateur

SB QST @ ARL $ARLB097
ARLB097 NTIA Report Bullish on Additional HF Allocations for Amateur
Radio

ZCZC AG77
QST de W1AW
ARRL Bulletin 97 ARLB097
>From ARRL Headquarters
Newington CT December 17, 1996
To all radio amateurs

High Frequency (3-30 MHz) Spectrum Planning Options, a planning
document released December 13 by the National Telecommunications and
Information Administration, says the HF spectrum is flexible enough
''to accommodate most, if not all,'' demands for additional HF

spectrum, including new and bigger HF ham bands. The NTIA is an Executive Branch agency in the Department of Commerce that's responsible for developing telecommunications policy and advising the President on telecommunications matters. The NTIA's latest report is a follow-on to an NTIA study released in March 1995 (see QST, June 1995, page 75).

The Options report addresses spectrum availability and long-range planning options for services that were identified in the earlier report as needing additional HF spectrum--including Amateur Radio. The report cites a potential 900 kHz or so of expanded or upgraded allocations for Amateur Radio in the HF spectrum, including:

+ an exclusive, worldwide allocation at 3500 to 3800 kHz
+ a new band at 4945 to 4995 kHz (additional technical studies would be required)
+ an ''aligned worldwide'' allocation at 6900 to 7200 kHz
+ expanded worldwide, primary allocations at 10100 to 10350 and 14000 to 14400 kHz
+ expanded allocations at 18068 to 18318, 24740-24890, and 28000 to 30000 kHz.

Some of the potential expansions proposed for amateurs and broadcasting are mutually exclusive or could involve sharing by the two services. These include the potential expansions at 30, 20 and 17 meters. According to the report, ham radio allocations account for 13.1 percent of the HF spectrum (3 to 30 Mhz). ''There are no current plans to auction any HF spectrum,'' the NTIA report states, but notes that additional allocations for ham radio would come at the expense of other services--primarily fixed, fixed-mobile and broadcasting. ''The expansion and upgrading of amateur allocations in the 10 MHz, 14 MHz, 18 MHz, and 24 MHz (bands) appear acceptable; however, this will depend on future decrease of requirements for the aeronautical mobile (R) or the fixed services internationally,'' the report said. Changes in the 80 and 40-meter bands ''will require the inclusion of these proposals in US preparations for future WRCs,'' the report added. A requested allocation at 6900-7200 would serve ''to reduce inter-regional sharing and interference from HF broadcasting in the 7100-7300 kHz band,'' the report said. The report called the requested upgraded allocation at 3500 to 3800 kHz ''a good candidate for a common worldwide exclusive amateur allocation at the 3.5 MHz band.''

To help satisfy demand for additional HF spectrum access, the report suggests more efficient use of current allocations, moving current HF spectrum users to other portions of the HF spectrum, use of other non-spectrum technologies and use of higher frequencies. The report also said sharing--and removal of some ''exclusive'' allocations--might be another option.

Calling ham radio ''the oldest radio service'' and one that ''pre-dates regulation,'' the NTIA report casts the hobby in a favorable light.

''Radio amateurs have made significant contributions to the field of radio propagation, HF single-sideband radio, HF data communications systems, packet radio protocols and communications satellite design.'' The report goes on to say that ham radio ''continues to play an important role in disaster-relief communications, where amateurs provide radiocommunications independent of the telephone network or other radio services.''

To view the complete report, set your Web browser to http://www.ntia.doc.gov/osmhome/reports/hfspo/contents.html.

The short answer is 2002.

The long answer involves getting the solar flux index from
the web somewhere, and running a propagation prediction program.
There's a good _free_ one you can get from the Voice of America.

Look in
ftp://ftp.voa.gov/pub/software/voacap/
for the software,
and in

http://www.clinet.fi/~jukka/wwv25.html

for current solar flux index (SFI).

This is a public service posting. It may or may not be relevant to the subject of your news group but it may be of significant interest to
the readers of your newsgroup.

Flash!

The Department of Justice under the direction of US Attorney General Janet Reno and the Office of the Attorney General for the
State of California under the direction of Daniel Lungren are investigating the following credit card companies for falsifying billing
statements: If you ever made a partial payment on your credit card and had them charge a late payment fee you may want to contact
these offices about participation in the conviction of these companies for racketeering by furnishing information about false billing
practices.

First USA Bank
PO Box 740085

Wachovia Bank Card Services
P. O. Box 4635
Atlanta, GA 30302

Wachovia Bank Card Services
P. O. Box 15515
Wilmington, DE 19886-5515

Check your billing statements closely. If you have been charged a late fee even though your payment was mailed prior to the due
date you should report it to your state attorney general. If your finance charges are being listed as purchases you should contact your
state attorney general. If your credit card company is unable to funish a copy of a signed billing receipt you should notify your state
attorney general.

All the events described above could make you a party to a class action suit against your credit card company where you could
collect up to ten times the amounts you were falsely charged.

For more information contact your state attorney generals office.

>I sure hope you have a dedicated high output alternator with another
>battery.

Nah. Just a regular alternator.

>Pretty soon junction temps will get critical and GAME OVER.
>After this its time to buy a new alternator.

I'm hoping that the connection direct to the battery will help
ease this burden a lot. When I was testing it on my explorer,
firing up the inverter (when connected directly to the battery
vi big clips for testing) didn't have any noticible effect on
the car's idle over a several minute time period.

i.e. I had the car running, fired up the inverter, and then
put a 450W load on the inverter. The idle didn't appear
to drop any at all.

Anyone else try this?

Thanks!

Garry

Within the USA, you can talk about whatever you want, as long as it isn't business, obscene, illegal, or encrypted. You also cannot transmit music. So yes, you can talk about other things. On the other hand, it is often wise to remember that what you say is potentially heard by a very large community and that even if it feels like a small conversation with close friends, you are talking in public. Loudly. Oftentimes the best advice is to avoid discussion of potentially divisive topics like politics or religion, particularly if you don't know the person you're talking to. (And avoid having screaming arguments with your spouse/SO on repeater autopatches :-).)

I believe there are some questions about this in the Novice/Tech question pools; there certainly is discussion in the study guides. In any case, see part 97.113 (copy at http://www.arrl.org/field/regulations/news/97113.html).

One of my buddies spoke to someone at the FCC and he was advised that the vanity callsign program is on hold due to some complaints from hams that did not receive the calls they applied for when the calls were available. The FCC supposedly checked their complaints and found them valid and has put the program on hold while they check their method of operation.

I want to stress that I did not talk to the FCC but got this word from one of my buddies. I hope it is not true. Anyone else out there hear the same thing?

First, It's not my radio or my price, read the top of the original post. Second, you can't buy one new for this price because they don't make them or sell them new anymore, the 582 has less receive and has been downgraded. Third, I have seen some others going around recently, and I don't think this price is too high. There was one posted a day later, without the 5W battery for $350. Fourth, it does say negotiable, so if you had any interest in buying it, no one said that price was written in stone. Fifth, if you don't want it, don't buy it.

Be careful - the idea about higher current power supplies helping
is an old wive's tale. What is important is that the color of the
power supply match the color of the radio, to eliminate DC SWR in
the power line. You probably had a color mismatch with the old supply.

Or even put up the tower (or other obvious antenna, etc.) and wait for
a week or 10 days. Sometimes the appearance of an antenna will cause
you to be accused of everything wrong in the neighborhood. If you
haven't been operating, it (probably) isn't your fault - except for
PFI (psychic freakquency interference)

Why is there such a big war between people that know morse code and
those that dont. I was led to belive by many of my friends (who are
hams) that ham radio was like a giant polite comunuity. Im starting to
wonder if I should get my license (which would be No Code Tech) if its
like an outcast thing to be one. It just seems alot like racism.
-ERic

(eek@rworld.com)
>>>>>>>>>>>>>>>>>>>>>>>>>>

Eric,

Hams just like any other group of people. We have our share of nuts. I
personally think the nocode tech was a step in the right direction for
amateur radio. Morse code was a good way to control who had access to
the frequencies. You had to be pretty serious about your commitment to
the hobby. Learning the code does take some investment of your time. I
don't mind the idea of the nocode class. Perhaps a small nocode band on
HF would be good as well. However, instead of the code requirement, I
think the technical knowledge should get more difficult. Personally, I
think the technical part of the exams are too easy as they exist today.
Morse code is great for those of us who want to learn it and use it. I'm
currently a nocode tech, and hopefully on 1/19/97 I'll become a tech
plus. I've enjoyed learning morse code and I look forward to using it on
the air soon. That doesn't mean everyone likes code or wants to learn
it. It should be an individual choice. Again, I think we need more
emphasis on the technical knowledge. An amateur radio license should be
something you have to work for to enjoy it's privileges.

As for the big war, well it's not so big. Most of the people I've heard
and talked to on the radio are polite and down right friendly. I've had
some good conversations with some good people and I've learned some
interesting things I probably wouldn't have learned anywhere else.

Good Luck Eric!

Michael P. Deignan <kd1hz@anomaly.ideamation.com> wrote:

>Not necessarily. For one thing, we might not have word processing
>software that requires 200MB of disk space to load. We might not have
>operating systems that ship on a 650MB CD-ROM because it is so bloated.

I don't know of any 200MB word processors, but there are 200MB office suites. But take today's word processor against 10 years ago. Now you have a spell-checker, grammar-checker, multiple WYSIWYG fonts, type-setting capabilities, encapsulation of non-text data objects such as graphics, photo, video, and sounds, linking to databases and spreadsheets, data sharing with other documents, built-in object programming language, etc, etc. You may not want all that and would be personally happy to stick with WordStar. But the space is spent on a *lot* of extra capability, not just used up to no purpose.

The Win95 OS ships on CD, but doesn't use all that space. Further the OS proper is still less than 100 KB in DOS mode and the Win95 kernel still only takes 1-2 MB in Windows mode. The remaining stuff is all extra whiz-bang like scandisk, defrag, virus scan, backup, internet browsers, OLE support, auto-setup utilities, etc, etc. Note that the "OS" now includes utilities that you used to have to pay extra for. Note also that the need for auto-install exists so that the OS can recognize any one of hundreds or thousands of video cards, sound cards, monitors, printers, and so forth that all work just a little bit differently. A situation forced on the OS programmers because the customers *insist* on the choice of components.

>We might not have application programs developed in these "high level"
>languages take 50-80MB worth of disk space for the most basic
>application.

The disk utilization has nothing to do with the "high level" languages. The last time I checked, a "basic" C++ program still compiled in a few KB. Now if I specify special features like multi-document interface, OLE, etc, I might end up with a few hundred KB, but that isn't very basic and it's still not much, nothing like 50-80 MB. If you're really unhappy about disk usage, Win95 still supports DOS WordPerfect (or WordStar for that matter). Also most large apps have a "custom" or "minimum" install option which lets you elect out of installing the font libraries, graphics libraries, help files, tutorials, program extensions and add-ins, etc. This will save you many 10's of MB's and let you avoid these "bloated" options.

At the same time, these "high level" languages combined with the object libraries that access the new OS features that you deride will soon allow any kind of data to be recorded or transferred to any kind of computer anywhere in the world in real time. This is an unprecedented accomplishment when you consider it. Encapsulating the methods required so that they are transparent to the users that do not need to be aware of the details does not prevent users who want to try different methods from excluding those libraries if they choose to implement their own.

>Personally, I like machine code. It gives a much better logical
>understanding of a program's operative flow. Certainly much better
>than "drop a control here and.... Presto!". That's not really programming
>at all.

What most people call "low-level machine code" is really assembly language for that particular CPU and is still written in ASCII text using symbolic reprsentation of instructions and data. *Real* machine code is down at the bit level where you hand-assemble the op-codes, mode bits, register fields, addresses, offsets, flags, etc out of 1's and 0's. I once knew of a project manager for a hardware instrumentation company (many years ago) that believed that you could only "understand" what the machine was "doing" if you hand-wrote machine code. Which involved a lot of paper, small 3-10 instruction routines per page, pencils and a lot of eraser. If you have ever had to do this, you know that it is a real crock, a terrible waste of time, and also has the effect of focussing your mind on trivial details rather than real design issues. Fortunately this guy was close to retirement when I encountered him and he was the only engineer I ever knew that believed that.

I agree with you that the DOS/Win to code/nocode analogy is very flawed. But I do perceive an analogy specifically between the kind of hand-written machine code I just described and higher level programming languages. I think morse is too much like hand-written machine code, and causes a large fraction of mental resources to be expended repetitively on trivial details, whereas progressively higher level programming languages free up mental capacity and allow expression of more power ideas. Certainly there is an additional "cost" (nothing like the numbers you gave for *comparable* capability, the numbers you gave included *extra* capability), but the tradeoff is in the ability to express more complex knowledge or ideas.

Well if you consider two amplifiers of equal output power then
you must assume the watt meter will read the same no matter
what class you are operating them. If you are considering two
amplifiers of equal input power (that is IP, not drive), then
there will be quite a diffrence in output between class A & class C

Mike is correct. Many months ago, Carl insisted on cross-posting the debate to both .policy and .misc. Most will recall me asking him to abide by the r.r.a charter and keep the debate on .policy - that group was created specifically to take the war off of .misc. Carl's response was an accusation that we were trying to "hide" the debate by relegating it some obscure NG that few had access to (completely false). Even the "followup-to: rrap" in the header of my articles was repeatedly deleted by him so as to continue the war here on .misc.

Ignoring a NG's charter is akin to anarchy, and anarchy will distroy the usefulness of a NG.

CW bands? Code is allowed on any amateur HF freq'y, so there really
aren't any "CW bands."

>...as a
>filter, I've heard 20 meters, 14313 and I'll tell you right now I wonder
>if this imaginary filter is working or am I to act like that when I
>upgrade?

It's not a filter, and you're missing a vital point: if you tune down
to the lower band edges where the code folks hang out you won't hear
any of the rubbish that occures in the half-dozen or so riff-raff voice
freq'ys. Try listening around say, 14000 to 14060 kc and tell us if you
can hear any kooks.

The point? Those who learn and *use* the code are, in general, very polite
ops. But even so, if, out of the 100s of kilohertz we have available to
us on HF, you can only point out a few riff-raff voice freq'ys (or
equivalently, if, out of the 700,000 licensed hams, you can only
point out a tiny percentage that are kooks), then I'd say we're doing
quite well behaving ourselves.

Point is, Jeff, that nobody that I know of appointed you the newsgroup
police.
Many were posting to .misc ... not just me. You were, for some time, the
singular
voice who kept posting to .misc and trying to force the entire debate (that
others had
started and you were actually horning in on) to go to .policy.

> Carl's response
> was an accusation that we were trying to "hide" the debate by relegating
> it some obscure NG that few had access to (completely false).

I didn't say "few have access" ... I said it was my experience that
policy was
not carried as widely as .misc ... I suspect that's changed some, but I
also suspect
that .misc is still carried much more widely. And yes, I do believe the
reason for
trying to force the debate to .policy is to "bury" it ...

> Ignoring a NG's charter is akin to anarchy, and anarchy will distroy the
> usefulness of a NG.

Give me a break! This is USENET ... it's supposed to be free speech, not
"Jeff doesn't want to talk about no-code (or have others hear
about/participate in
or (heaven forbid) *support* it ... so we have to bury it in an obscure
corner."

If you think that having code/no-code debate threads in .misc is going to
cause
any consequential damage to anything, you've got some VERY wierd
views on live and what's of consequence.

Give it a rest and stop trying to tell others what to talk about (or where)
..
if you don't want to see/hear/read it, simply ignore it ...

The vanity call program is ongoing, the gates aren't done with. They simply open and stay that way. It hasn't replaced the systematic callsign assignment that has been in effect for years.
Once the initial surge of applicants for each gate have been processed, it will slow way down. A year from now, Gettyburg will probably process no more than a couple hundred each month, if that many. Assuming Gates 3 and 4 are opened within the next 6 months, a year from now those who have wanted vanity calls will have them in hand.

Amen. I worked on a project where power lines were routed under flooring in a shelter. A faulty circuit breaker did not open when the current exceeded its trip rating. About 50 amps. flowed though the wire; current was limited by the source impedance. No fires started, but....the insulation decomposed and created cyanide gas. A technician working in the area was overcome, but was saved. Needless to say, all of the wire was replaced with insulation which did not produce toxic fumes under such conditions.

>>compliant.

>The limit on HF should have been set at 100 w.

The 50-watt limit was set as a "worst-case" limit. If it applies to the worst-case frequency range of 30-300 MHz, it would make sense if the 50-watt level were scaled for other frequencies.

The ARRL has asked the FCC to retain the 50-watt limit across the board, but has asked that on frequencies other than 30-300 MHz, it be scaled to match the exposure levels in the regulations.

We have also asked that an additional exclusion of 150 watts be included for stations operating below 30 MHz whose antennas are located 10 meters from areas of exposure.

The article in January QST explains some of this in more detail.

Does anyone know if there are any all-mode 2m and/or 70cm mobiles or portables on the market? I have seen the ones Yaesu makes, big, clunky, and too expensive. I want to start working the 'birds' portably, and don't want a base radio. Also, can any Icom/Kenwood/Yaesu mobiles be moded to operate on SSB?

73,

Will

>to drop any at all.

With modern computerized engine controls, idle shouldn't change. It isn't like the old carburetor days when there was a mechanical idle screw. The computer just lengthens the duration of the fuel injector pulses to compensate for the extra loading.

But if the alternator can't make up the charge you're drawing from the battery, you'll eventually totally discharge the battery, even with the engine running. So the battery can only help for *short duration* discharges. For a continous load, the alternator ultimately has to supply all the current. Operating the alternator flat out *continously* is beyond its design specification. It will overheat, and it will fail.

Modern vehicles have higher cpacity alternators than only a few years ago when 35 amps was a standard alternator rating. Production vehicles typically have a 65 amp alternator today. But it isn't intended to supply 65 amps *continously*. The manufacturers still offer "police" packages with higher capacity alternators, often 90 amps. That's large enough to handle a continous 50 amp load.

Try your test for a few hours, with headlights on, air conditioner running, radio blaring, etc, and see if the alternator gets hot and if the battery retains full charge. If the battery stays up, and you can hold your hand on the alternator at the end of the

test, then things should be Ok (though you should really run the
test in July so that cooling air for the alternator will be at
summer ambient).

About 15 years ago another ham and I communicated using our dummy loads as antennas. Of course there was only 20 feet between our stations as next-door neighbors. Surprisingly we seldom interfered with each other, preferring different bands and having different schedules.

Much earlier than that I once loaded up a crib spring as a joke. A friend across town (on 15 meters) said my signal improved tremendously over the inverted V in the yard.

1242. GB2RS News 19th January 1997

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-17 00:00:00 UTC
From: No Junk Email Please <noone@llondel.demon.co.uk>
Message-ID: <853551257snx@llondel.demon.co.uk>
Source record: 206919
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 19th of January and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The RSGB's new Executive Vice-President is John Greenwell, G3AEZ. He was elected by RSGB Council at their meeting on the 11th of January. The following changes were also announced following the Council meeting:

Paul Essery, GW3KFE, is the new Chairman of the Membership Liaison Committee. He fills the vacancy created when Ian Kyle, GI8AYZ, was elected President.

Ian Cornes, G4OUT, has been appointed as the new VHF Manager. David Butler, G4ASR, had earlier resigned from the position and is thanked for his good work in representing UK interests internationally. G4OUT is continuing with his duties as VHF Awards Manager.

Two committees have had name changes: the Executive Committee is now known as the Management Committee, a title which more accurately reflects its duties, whilst the Repeater Management Group is now the Repeater Management Committee or 'RMC', to bring its title into line with the other committees. Chris Goadby, G8HVV, is the new Chairman of the RMC. The previous incumbent, Geoff Dover, G4AFJ, was recently elected to RSGB Council.

Details of all RSGB committees appear regularly in RadCom. The February edition will be posted to all RSGB members next Friday, the 24th of January.

The VK0IR Heard Island DXpedition started operations as scheduled on Tuesday the 14th of January. RadCom IOTA Columnist Neville Cheadle, G3NUG, reports working the expedition at 0853UTC on Tuesday on 18145kHz SSB, whilst RSGB DX News Sheet editor Chris Page, G4BUE, worked VK0IR about an hour later on 21MHz CW.

The atmospheric conditions recently created a 'lift' in propagation which was evident well into the UHF spectrum. Last Monday, the 13th, John Bales, G0HAT, near Harrow, worked Tony Ault, G3KTU, on the south coast on 1.3GHz ATV. The operators, who are both members of the Home Counties ATV Group, exchanged perfect 'P5' full colour pictures between 2100 and 2200UTC, over a path which is normally marginal even on 2 metres.

An RSGB Liaison Officer in the West Midlands has been appointed. He is Tony Faulkner, G0SKG, whose address is correct in the RSGB Call Book.

An RSGB Liaison Officer in Bedfordshire has been appointed. He is Geoff Linssen, G0PIZ, whose address is 401 Dallow Road, Luton, LU1 1UL.

Now some items of HF DX news from the weekly RSGB DX News Sheet edited by Chris Page, G4BUE:

From Barbados, VA3DX is active as 8P9DX from the 19th of January to 2nd of February on all bands, mainly CW. QSL via VE3ICR.

From Svalbard, JW5NM resumes activity from the 20th of January following a break in Norway.

And from Saint Peter and Paul Rocks in the central Atlantic, a DXpedition using the callsigns ZY0SK and ZY0SG is planned to start on Saturday the 25th of January. Activity will be for two to three weeks on SSB, CW and RTTY.

Now news of some special event stations:

GB2TB is operating from the Community Centre, the Causeway, Billingham, on Teeside, from now until the 9th of February. The station is making contacts on a sponsored basis in order to raise funds for a permanent memorial to the former RAF Thornaby airfield and all personnel who served there. The airfield was closed in 1958 and the site is now a shopping complex with nothing to indicate that an aerodrome existed.

The Ayr Amateur Radio Group will be operating GB2RB on Saturday the 25th of January to celebrate the birth date of Robert Burns. The station will operate from his birth place at Burns Cottage in Alloway. Most activity will be on 80, 40 and 20 metres.

The Bromsgrove and District Amateur Radio Club will be operating GB2FFL during the Air Ambulance Weekend on the 24th, 25th and 26th of January. For further details call John Harvey, G4IVJ, on 0121 453 9521 before the event starts.

And 11 other Special Event Stations will also be on the air on the 25th and 26th to help publicise the County Air Ambulance Service and an award is available for contacts with these stations. For further details please contact Geoff Woodford, G0KNM, whose address is correct in the RSGB Call Book, or make a contact with the stations next weekend.

Next the Rally News:

The Oldham Amateur Radio Mobile Rally takes place today, the 19th of January, at the Queen Elizabeth Hall in the Civic Centre, West Street, Oldham. The event features traders, a bring and buy stall and RSGB Morse tests on demand. Doors open at 11.00am, or 10.30am for disabled visitors, and talk-in is on 2 metres channel S22.

Next Sunday, the 26th, the Horncastle Winter Rally takes place at Horncastle Youth Centre. The main attraction is said to be 'lots of good honest radio junk'. Doors open at 10.30am and for further details please ring 01 507 522 482.

Also next Sunday the 26th, the Lancastrian Rally will take place at the University of Lancaster. The event features a bring and buy stand and special interest groups. For further details call Sue Griffin on 01 524 64239.

Now for the contest news:

40 metre sessions in the RSGB 'LF' CW Cumulative Contest take place both today, Sunday the 19th of January, and next Sunday, the 26th, between 10 and 1200UTC. All activity should be between 7015 and 7040kHz. On Wednesday evening, the 22nd, there is a 160 metre session. It is on CW from 2000 to 2200UTC between 1830 and 1870kHz and between 1950 and 1960kHz. And on the afternoon of Saturday the 25th there is an 80 metre session of this contest. It runs from 1600 to 1800UTC between 3530 and 3580kHz. Novices are particularly encouraged to operate in the 160 and 80 metre sessions and participants gain additional points for contacts with Novice stations. The full rules are in the September 1996 RadCom.

Next weekend, the CQ World Wide 160 metre DX Contest takes place. The contest starts at 2200UTC on Friday the 24th and lasts until 1600UTC on Sunday the 26th. Brief rules are in the January RadCom.

On VHF, the first and second sessions in the RSGB 70MHz Cumulative Contest takes place today, the 19th, and next Sunday the 26th of January, between 1000 and 1200UTC. The full rules were published in the September 1996 RadCom.

SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Tango and M1 Bravo Echo series, and Novice calls in the 2 0 Alfa Papa and 2 1 Foxtrot Mike series.

And now the solar factual data for the period from the 6th to the 12th of January 1997, compiled by Neil Clarke, G0CAS:

Solar flux varied little and averaged 74 units. The 90-day solar flux average on the 12th was 76. X-Ray flux increased to A1.5 units on the 11th, but otherwise was at A1 units. Geomagnetic activity started the period at 'quiet' levels with an Ap index of 2 on the 6th. At 0100 hours on the 10th a sudden storm took place which lasted until the late afternoon. At its peak during the late morning the three-hourly Kp index reached 6, and an Ap index of 31 was recorded for the 10th. Solar wind data from a variety of sources suggest the passage of a magnetic plasma cloud. This cloud may be related to a large coronal mass ejection observed by the 'SOHO' spacecraft on the 6th of January. The 'WIND' spacecraft data suggests that the mass completed passing by the Earth at 1800 hours. Activity declined to 'unsettled' levels on the 11th and 12th, with an Ap index of 13 and 10 units respectively. The average was Ap 11.

Now the ionospheric data for Central France for the period from the 3rd to the 9th of January. The F2 daytime critical frequencies improved slightly from 5.8MHz on the 3rd to 6.9MHz by the 6th. Levels then declined and the average for the period was 6.1MHz. The darkness hour

lows averaged 2.4MHz, but on the 5th were down to 1.9MHz. Spread F took place during the early hours of the 3rd and the 4th. Daytime highs took place between 1100 and 1500 hours, whilst darkness hour lows were between 0500 and 0700 hours, except on the 4th and 7th, when they were at 1900 hours.

And lastly the solar forecast. This week the quieter side of the sun will be rotating into view and solar activity is expected to be at very low levels. Solar flux is expected to decline as the week goes on, and be around the 70 mark by next weekend. Geomagnetic activity should be mostly 'quiet' throughout the coming week. MUFs during daylight hours are expected to be about 19MHz at equal latitudes for the south, and about 3MHz lower for the north. Darkness hour lows are expected to be about 8MHz.

And that's the end of the solar information.

It would be worth noting that the "dielectric quality" of the insulation
would be very lossy on high frequencies and above. TV twin lead would be
a better choice considering this factor. Since twin lead is so cheap for
the asking, it makes little sense to use lamp cord for any RF work.

----

LITTLE LEOs NARROW 2-METER FOCUS TO 146-148 MHZ

In their effort to secure spectrum space that includes the 2-meter and 70-cm ham bands, the Little LEOs have narrowed their focus on 2 meters to the 146 to 148-MHz segment. The industry also appears to be attempting to reposition itself as a potential emergency communication adjunct to ham radio.

The little LEOs will use low-Earth-orbiting satellites to provide position-location and two-way data-messaging services to potential customers around the world. Customers would use small, inexpensive transceivers to communicate with satellites. According to the FCC, potential uses of this service include emergency location in remote areas, environmental data collection, vehicle tracking, and time-sensitive business and personal data communication.

For Region 1, a draft little LEO frequency allocation table has proposed adding a primary mobile-satellite allocation of 146 to 148 MHz to the existing allocations for fixed and mobile (except aeronautical mobile [R]

services). The table was contained in a working paper--Document IWG-2A/86 Rev. 3, entitled "New Allocations for the Mobile-Satellite Services Operating Below 1 GHz"--submitted by representatives of the Little LEOs industry to Informal Working Group-2A (IWG-2A) January 7.

The 146 to 148-MHz segment is not a ham band in Region 1, but in Regions 2 and 3, a footnote would be added to state: "Additional allocation: the bands 146-148 and 430-440 MHz are also allocated to the mobile-satellite service, limited to non-geostationary satellite systems, for use only during emergency communication situations as a complement to the amateur service in accordance with Resolution No. 640."

The little LEO proposal also calls for a new primary allocation for the mobile-satellite (space-to-Earth) service for 430-440 MHz in Regions 2 and 3 (ham radio is primary in Region 1), and offers this rationale. "The allocation for the mobile-satellite service within the bands allocated to the amateur service is intended to be a complement to that latter service in situations involving emergency communications as provided for the [sic] Resolution No. 640."

As currently drawn, Resolution 640 covers only the 144 to 146-MHz segment of 2 meters and does not apply at all to 70 cm.

In the 440 to 450-MHz band, where the Amateur Service is not listed in the international table of frequency allocations except by footnote (ham radio is secondary in Australia, the US, Jamaica, the Philippines, and Canada), the little LEOs proposed a new worldwide primary mobile-satellite (space-to-Earth) allocation.

Calling their service "inherently global" the little LEO group said the industry needs "frequency allocations that can be used anywhere in the world," for nongeostationary, nonvoice mobile satellite service through the year 2002. "ITU-R studies indicate sharing is possible," the industry said.

"If the demand for Little LEO spectrum cannot be satisfied by allocations that could be used on a worldwide basis, one solution is to assign different frequencies for use in the various regions of the world from within the allocations to the mobile satellite service," the working paper's preamble said.

Little LEO firms CTA, E-Sat, Final Analysis, GE Starsys, and LEO One submitted the third revision of the lengthy paper--which drew criticism from the ARRL as well as from military and land-mobile interests and the National Telecommunications and Information Administration--at the January 7 session. The ARRL continued its objection to the inclusion of amateur bands and to the misapplication of Resolution 640. For now, Document IWG-2A/86 Rev. 3 is tabled, but it's expected to come up again at future meetings. IWG-2A meets on January 21 and February 4.

Overall, the little LEOs proposed the following bands for additional allocation to nongeostationary data-only mobile satellite service systems: 138-144, 146-148, 149.9-150.05, 150.05-156.7625, 380-387, 387-390, 390-399.9, 399.9-400.05, 400.15-401, 430-440, 440-450, 470-608 and 614-806

MHz. The paper notes there are proposals concerning 401-406 and 450-470 MHz and for feeder links at 1390-1400 and 1427-1432 MHz in other papers, and that "additional allocation proposals are under construction for the 174-230 MHz band."

For additional information on the little LEOs situation, read the editorial "It Seems to Us . . ." in by ARRL Executive Vice President David Sumner, K1ZZ, in February 1997 QST.

HEARD ISLAND IS ON THE AIR!

"Go and get them, fellas!" With those words of encouragement (if any were needed) via the Internet, John Devoldere, ON4UN, sicced the madding crowd on VK0IR on Heard Island. At 0645 UTC on January 14, VK0IR hit the bands (four of them at first) running. The long-anticipated start of HF operations followed the team's on-schedule landing on the island late Saturday, January 11. In just about two days of operating, the VK0IR team managed to work 12,000 stations --most of them in Japan, Europe and the Eastern US. Operators will give priority to openings into the Western US.

Two high-power operating positions apiece are set up in two radio tents. A storage tent will house a fifth high-power station that will be used mostly on the low bands. As of January 15, four stations were on the air. VK0IR also was operating via Oscar 10. The team was not on 80 meters the first night (January 14-15), because of interference from the 40-meter station. VK0IR was on 80 meters for its second day of operation, but high winds have prevented installing a vertical antenna for use on 75-meter SSB, so there's been no operation there.

Here is the general announced schedule of bands, modes and operating frequencies (subject to change as conditions dictate) for VK0IR. VK0IR operators will work split, but at some point later in the DXpedition, they may invite calls on their own frequency. Twenty meters is expected to be the "bread-and-butter" band for VK0IR. More operating details and frequencies for subbands (Novice, VHF, etc.) and specialized modes are available on the Heard Island home page, http://www.ccnet.com/~cordell/HI/. VK0IR also has been active on OSCAR-10.

CW RTTY SSB

28.024 28.475
24.894 24.945
21.024 21.085 21.295
18.074 18.145
14.024 14.085 14.195
10.103.5 10.140
7.007 7.047.5
7.022 7.030
3.507 3.799
3.522
1.826.5

Given the short duration of the DXpedition and the intense pressure to work VK0IR from around the world, the team is asking stations to follow its guidelines for working Heard Island. Operators typically will announce the split (eg, "QSX 5" or "up 5") and have been sending QRZ or TU as an invitation for stations to call. Stations should refrain from tail-ending and from calling while VK0IR is working another station. VK0IR typically will listen up 5 kHz from its transmitting frequency, but reports from stations working the team suggest that splits might be wider than that on some bands and modes.

A serious problem with the PACSAT setup on Heard has meant that VK0IR logs cannot be forwarded via that route. ON4UN reports that team members are trying to come up with a way of sending the logs via commercial satellite and e-mail, but as of January 17, this was not operational.

Provided it can get in touch with the team. Radio Austria International will attempt to interview the Heard Island team via satellite telephone. The interview is scheduled to be broadcast this weekend. RAI broadcasts to North America at 0000-0300 UTC on 7.325 MHz; 1100-1400 UTC on 13.730 MHz and 0500-0700 UTC on 6.015 MHz (via a Radio Canada International relay in New Brunswick, Canada). Check the RAI home page at http://www.ping.at/rai/.

The VK0IR team expects to leave Heard Island at month's end. On the return sail, the team will stop at Kerguelen Island "for about one day," according to John Devoldere, ON4UN. He said the chances of any Kerguelen operation are "minimal."--digested from the Heard Island reflector

ANOTHER VANITY DELAY?

Callers to the FCC's Gettysburg, Pennsylvania, office are being told that it might be early March before the FCC resumes processing vanity call sign applications--including all of those received at Gettysburg since the end of November. An FCC spokeswoman this week cited unspecified "computer-related" problems for the potential delay, and said the FCC would release additional details probably next week. "We've been getting a lot of calls," she said.

No vanity applications have been processed since December 19, 1996. While working to resolve the latest problems, Gettysburg personnel say will continue to whittle down the stack of some 600 vanity applications that required special handling from the December 19 vanity call sign run. The FCC spokeswoman said that most of the applications in that "work in process" or WIPS stack involve situations where the FCC was unable to grant any of the applicant's call sign requests. However, additional call sign grants have trickled out of Gettysburg as the WIPS applications have been dealt with. The FCC also is in the midst of processing several hundred refunds for earlier unsuccessful vanity filers.

The FCC has not yet announced a date for the opening of Gate 3.

HAM-ASTRONAUTS SWAP SPOTS ABOARD MIR

Ham-Astronaut Jerry Linenger, KC5HBR, has became the fourth American to occupy a position on the Russian Space Station Mir, following the docking Tuesday of Atlantis to the Russian space station late Tuesday. Linenger

officially traded places with fellow ham-Astronaut John Blaha, KC5TZQ, when their form-fitted Soyuz seat liners were swapped in the small spacecraft that is used for return to Earth. "We're truly in the space station business," said Blaha, who completed 118 days as a Mir crew member. Linenger will stay aboard Mir until May. Linenger also spent his 42nd birthday (January 16) aboard Mir. "I could not think of a nicer place to have my birthday," Linenger told Dave Larsen, N6CO, during a packet QSO Thursday. Over the past few days, Blaha has been helping to familiarize Linenger with his new home.

During his stay aboard Mir, permission was obtained from the FCC to permit Blaha to engage in third-party communication with unlicensed individuals on Earth. This led to a series of MIREX contacts with several schools. The last contact, on Saturday, January 11, was with pupils at Emerson Elementary School in Snohomish, Washington. The school's technical curriculum specialist Gary Evans e-mailed an enthusiastic note of gratitude to AMSAT's Vice President for Manned Space Programs Frank Bauer, KA3HDO. "It was tremendous! I wish you could have seen for yourself the faces of both the students and their parents as our contact with Mir evolved." Evans described "an overwhelming sense of being part of a terrific, once-in-a-lifetime experience."

"Most of the parents grew up with the space program, and here it was, right there in the room with us! It was an overwhelming experience. I was not prepared at all for the emotion which this contact caused in my room Saturday morning," Evans said.

It's not known how active on ham radio Linenger expects to be during his stay aboard Mir.

Blaha recently sent a thank-you e-mail note to the SAREX Working Group (SWG) for its work in arranging school QSOs for him while he was aboard Mir. The Naval Oceanographic Office, which assisted the MIREX QSO between Blaha and the Harper McCaughn Elementary School in Diamondhead, Mississippi, is now interested in doing a program similar to SAREX. The Navy wants to use Amateur Radio to allow students to talk to Naval Oceanographic Office employees who are out on exciting expeditions.--NASA/SAREX Working Group

FCC ESTABLISHES 5.7-GHZ U-NII SERVICE

The FCC has amended Part 15 of its rules to make available 300 MHz of spectrum in the 5-GHz range--including part of secondary Amateur Radio allocations in that region--for use by Unlicensed National Information Infrastructure (U-NII) devices (formerly referred to as NII/SUPERNet devices). The FCC made available 5.15 to 5.35 GHz and 5.725 to 5.825 GHz. Part 15 requires that unlicensed operations not interfere with other services. The U-NII devices will provide short-range, high-speed wireless digital communications on an unlicensed basis.

The 5.650 to 5.925-GHz band is allocated on a secondary basis to the amateur service; additionally, the 5.65 to 5.67-GHz and 5.83 to 5.85-GHz subbands are allocated to the amateur-satellite service on a secondary basis. The

original FCC U-NII proposal included 5.725 to 5.875 GHz, but the plan adopted this month excludes 50 MHz of this, including the Amateur Radio-satellite downlink at 5.83 to 5.85 GHz.

The FCC said it anticipates that U-NII devices will support the creation of new wireless local area networks (LANs) and provide wireless access to the National Information Infrastructure (NII). That's the name the FCC has given the "group of networks, including the public switched telecommunications network, radio and television networks, private communications networks, and other networks not yet built" to serve US communication needs.

The FCC said it was "adopting the minimum technical rules necessary to prevent interference to other services and to ensure that the spectrum is used efficiently" in order to permit "significant flexibility in the design and operation of these devices."

Significantly, the FCC abandoned its original proposal that would have presumed that U-NII devices were not causing harmful interference--even if interference was, in fact, caused--as long as the devices were operated within the technical parameters of the new regulations.

Although it initially proposed a listen-before-talk protocol, the FCC deleted this requirement in its final Report and Order, concluding that requiring such "spectrum etiquette" could delay deployment of U-NII devices and hinder innovation. Instead, the Commission concluded that simple technical rules "should be sufficient to ensure spectrum sharing between incumbent operations and new U-NII devices." The Commission also declined to adopt a channelization plan or a minimum modulation efficiency requirement.

Incumbent users of the 5.725 to 5.825-GHz band either opposed allowing U-NII operation because of interference concerns or urged that sharing studies be completed before that band was made available to U-NII devices.

In its comments on the plan, the ARRL argued against setting up an unlicensed service. The League asserted that longer-range community networks are not consistent with the typical low-power operations authorized by Part 15. The ARRL said that that the Communications Act requires that such higher-powered systems with a significant interference potential be operated on a licensed basis, and that the FCC was unlikely to enforce the requirement that unlicensed-device users cease operation if they cause harmful interference to allocated services.

The League argued that permitting the power of U-NII operations to exceed 100 mW EIRP or permitting the use of high-gain antennas by non-spread-spectrum U-NII devices would represent a significant departure from the underlying precepts of Part 15. Although the ARRL opposed the operation of U-NII devices in the 5.725 to 5.825-GHz band, it stated that if a 100-mW EIRP limit and a power spectral density (PSD) limitation of 0.03 mW in any 3-kHz bandwidth were adopted, then U-NII devices should be able to share this band with incumbent operations.

The FCC concluded that an increase in the power limits proposed in its rulemaking notice was supported by "new material in the record in this

proceeding" but said that unrestricted antenna gain should be permitted because of interference concerns. The Commission decided to increase the maximum peak power limit to 50 mW peak transmitter output power with up to 6 dBi antenna gain (which equates to 200 mW EIRP) in the 5.15 to 5.25-GHz band; 250 mW peak transmitter output power with up to 6 dBi antenna gain (which equates to 1 W EIRP) in the 5.25 to 5.35-GHz band; and 1 W peak transmitter output power with up to 6 dBi antenna gain (which equates to 4 W EIRP) permitted in the 5.725 to 5.825-GHz band. Further, the FCC adopted a PSD requirement for U-NII devices that would require that the maximum power be spread across a bandwidth of at least 20 MHz.

The FCC said it believes that the new rules "will foster the development of a broad range of new devices and service offerings that will stimulate economic development and the growth of new industries."--FCC

MORE ARRL CONTEST RULES CHANGES, CORRECTIONS

The ARRL Contest Advisory Committee and the ARRL Awards Committee have clarified the rules on using repeaters to make contacts for ARRL VHF and UHF contests. Prior rules have prohibited the use of "repeaters or repeater frequencies on 2 meters for the purpose of soliciting contacts." The change removes the words "on 2 meters" from the rules, thus prohibiting the use of all repeaters and repeater frequencies regardless of band.

The ARRL Contest Branch has clarified a rule change announced recently that will affect the ARRL International DX Contest starting in 1998. The change eliminates the 10-minute rule for multioperator single transmitter entries only, not the two-transmitter category as announced earlier. The current rules require a station to remain on a band for at least 10 minutes once operation has begun on that band. The new rule--which will not take effect until the 1998 contest-- instead allows for six band changes per hour, which lets a station quit an unproductive band after a single contact. Additionally, the allowed six band changes are for a clock hour, and not just an arbitrary 60-minute period.

In other changes:

* Club winner certificates for the five ARRL contests that include club competition will now be administered by the participating clubs. This leaves the clubs free to choose their own "most valuable players." In the past, the certificates issued from ARRL HQ went only to top-finishing (unassisted-multiband) single operators for each club.

* The ARRL Contest Advisory Committee and the ARRL Awards Committee have voted down a proposal to add a power level to the exchange in the ARRL 160-Meter Contest.

HAMS RESPOND TO COMMUTER PLANE CRASH IN MICHIGAN

Members of the Monroe County (Michigan) ARES were activated late on the afternoon of January 9 in response to the crash of a Comair commuter aircraft near Ida, Michigan. The flight (Flight 3272) was en route to Detroit from Cincinnati, Ohio, and carried 26 passengers and a crew of

three. All aboard lost their lives.

A communication center was activated at the Monroe County Chapter of the American Red Cross, and Amateur Radio units were initially dispatched to the crash scene and the field command post at the Raisinville Township Hall. Communication was provided to the Red Cross, which assisted Emergency Management and Human Services Personnel. In all, 26 amateurs were involved with the emergency operation as local officials and National Transportation Safety Board conducted their investigation. Blowing snow and 30-degrees-below-zero wind chills hampered efforts at the crash scene, which occurred on farmland about 150 yards from the town hall. The Monroe County EC is Mike Karmol, N8KUF.--Dale Williams, WA8EFK

SOLAR SUMMARY: GEOMAGNETIC EVENT AFFECTS K INDEX

Solar Seer Tad Cook, KT7H, in Seattle, Washington reports: Average solar flux and sunspot numbers for the past week were almost unchanged from the week previous, but there was some noticeable geomagnetic activity. A coronal mass ejection from the Sun on January 6 caused a disturbance four to five days later when a magnetic plasma cloud caused a severe storm at high latitudes. The planetary K index rose as high as 6 on January 10 at 0600 and 0900 UTC. The planetary A index for the day was 31.

Over the next few weeks the solar flux should stay around the low to mid-70s, probably 72 to 74 most of the time. Some slightly unsettled conditions may appear around January 26, and again from February 3 to February 8, with some possibly unstable conditions on February 6 and 7. Expect 160 and 80 meters to yield some good conditions, with solar flux low and the nights long.

A wire service story this week said that scientists from NASA and the astronomy department at Yale University presented findings at a meeting of the American Astronomical Society in Toronto which predicted a decrease in overall solar activity for the next solar cycle. They admitted that their forecast was at odds with many other predictions, and that solar activity is highly unpredictable. But the scientists said that if their prediction is correct, it will reverse what they claim is an overall 400-year trend toward greater solar activity.

Sunspot numbers for January 9 through 15 were 12, 13, 12, 0, 0, 0 and 14, respectively, with a mean of 7.3. The 10.7-cm flux was 73.7, 75.4, 74, 74.5, 74.6, 74.9 and 75.8, respectively, with a mean of 74.7. The estimated planetary A indices for the same period were 6, 31, 13, 10, 5, 4, and 4, respectively, with a mean of 10.4.

"LOWFER" AUTHOR, EXPERIMENTER KEN CORNELL, W2IMB, SK

Low-frequency author and experimenter Ken Cornell, W2IMB, of Point Pleasant Beach, New Jersey, died early this month. He was 79. Cornell was, perhaps, best known for The Low and Medium Frequency Radio Scrap Book series (the 10th edition was published recently). He also authored many articles over the years and was a frequent contributor to Lowdown, the newsletter of the Longwave Club of America.

QST AUTHOR CARL HEINEN, W0MCN, SK

Carl Heinen, W0MCN, of Roseville, Minnesota, died in September 8, 1996. He was 76. A well-known experimenter, Heinen authored several articles for QST, including "Watts from The Wind" in the July 1977 issue, which also featured a picture of Heinen and his wind-powered generator on the cover. Heinen also wrote "An Experimental All-Transistor Communications Receiver" (QST, Nov 56) and "A QRP Transmitter for 40 and 80 Meters" (QST, Apr 73). Heinen was retired from Honeywell. His wife, Ruth, and two children survive.

IN BRIEF:

* This weekend on the radio: North American QSO Party, phone, 1800 UTC, January 18 to 0600 UTC, January 19; ARRL January VHF Sweepstakes, 1900 UTC January 18 to 0400 UTC, January 20. See January QST, page 107 for details

* Licenses-renewal reminders: The ARRL has begun mailing license-renewal notices to members whose ham tickets are about to expire. The renewal package will include an FCC Form 610 and an FCC addressed envelope. Nearly 3100 notices were set to be mailed this past week to hams whose licenses will expire between February 17 and May 30, 1997. The last renewal notices sent by the FCC covered licenses expiring on February 16, 1997. Now that FCC has stopped sending renewal notices, the ARRL decided to resume this popular member service.

* Hams have Inauguration role: The Maryland Apple Dumpling Amateur Radio Society (MADRAS) is providing volunteers to help before and during the Presidential Inauguration activities Monday, January 20. W3USS at the US Senate Office Building will be on the air. Hams in the club will also assist in various public service activities during the inaugural ceremony and parade.--Joel Harding, KE3YK

* N3JT leaves FCC staff: Attorney Jim Talens, N3JT, retired from the FCC staff on January 3, 1997, after almost 22 years at the agency. Most recently, Talens was involved in the matter of the little LEOs and the 2-meter band, as he explains "serving as mediator behind-the-scenes to explain the hams' position in a rather heated atmosphere." Previously, he was involved in satellite work, cellular radio and telephone regulation. Talens, 50, plans to go into private law practice focusing on communication law.

* Nonagenarian Novice: Derward Day, KC8FPJ, of Northville, Michigan, recently obtained his Novice ticket at the age of 91, demonstrating it's never too late to take up a new hobby.

* DXCC processing status: The ARRL DXCC Desk reports the number of unprocessed applications at the end of December 1996 was 463 (39,893 QSLs). The desk received 386 applications (29,401 QSLs) for endorsements and new awards during the month. Applications being sent out at the end of December were received less than a month earlier. A few applications received prior to that time were still in the process of being audited.--Bill Kennamer, K5FUV

* Challenger special event: On Tuesday, January 28, 1997, Challenger Middle School Amateur Radio Club in San Diego, California, will operate special event station KI6YG to commemorate the 11th anniversary of the Challenger space shuttle tragedy. Operating hours will be from 1600 UTC on January 28 to 0100 UTC on January 29, on or about 14.250, 21.350, and 28.350 MHz. A special commemorative QSL will be available. Send QSL and SASE to Challenger Middle School, Attn: Frank Forrester, 10810 Parkdale Ave, San Diego, CA 92126.

So, I would be better off saving the money, and just buy the 6 watt HT
instead of the 7 watter, that costs about $80 more? I would be using
it with the battery most of the time.

I'm not surprised at this! And this from the most wonderful and honest
and law abiding Country in the world - truly amazing. Do not worry, we
will continue to support shareware writers like yourself by making
HamComm3.1 available for download on our site
http://www.pervisell.com/ham

Good luck with hacking the hackers

Troll? Wowsers, talk about your golden oldies

By the way, one difference is that with golf you get some exercise
and sun. With amateur radio I get fat(ter) and pasty-colored.

A la the white fat hams so loved by BURT..a white fat boring ham

And amateur radio is NOT A GAME! We're deadly serious! Haven't you
been reading these news posts???? Of course I've never heard of
someone breaking their radios in half after not making a contact, unless
they haven't heard HEARD. I have heard (no relation to the island) of
people breaking their clubs after missing a shot in golf. And no
one ever turned pro when they became a really really really good
amateur.

Or in WA6VSE's case, just a rank amatuer..errrr make thank just rank

I wonder what frequency a 3-iron is resonant at.....

Maybe if we whap Carl upside the head, it will vibrate like a tuning
fork. Then again, maybe the club will as well

with apologies to Mark N2WZB and crappy golfer (in others, when it comes
to a number 1 ranking in golf, his game is strictly #2).

1253. More effective? Hamstick Dipole vs. Folded Dipole

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-17 00:00:00 UTC
From: Paul Knight <pknight@elec.ctl.etn.com>
Message-ID: <32E01697.249E@elec.ctl.etn.com>
Source record: 206930
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

Hello! I was hoping to get an opinion or two on
which setup might be more effective: a dipole made
up of two Hamstick antennas, or a full-size dipole
folded into a U shape, as shown below:

```
---------- -----------
| |
| |
| |
| |
| |
----------X X-----------
```

Where the coax is connected at the two points
marked "X". Assume identical mounting height
and environment for the two antennas.

Please drop me a note if you have an opinion.

My wife is flying into Birmingham tonight, and is meeting some other hams she has never met, and would like to know which repeater is usable from within the ground transportation area, and what tone if any. The other hams are from Northern Alabama and don't know which repeater is best either.

Please email me or reply here, It took years to convince her how useful a ham license is, and now is a chance to really prove it.

Thanks in advance

I send a QSL to anyone who sends me one. In the past ten years this seems to be a courtesy that is ignored. I always figure if someone sends you a QSL, he must need one. You never know if it is a brand new ham or a old timer going for a award. Naturally if someone asks for a QSL I also send one. I was brought up on the old school and have been a ham for 35 years since High School. I figure if I can afford to be a ham I can afford the return postage when someone sends me a card.

"DESIGN DATABASES AND DRIVE MICROSOFT ACCESS"

Last year I taught a night school class which deal with
database design and the use of Microsoft Access.

The students were mainly business people wanting to make
practical use of either Access 2.0 or Access for Windows
95. Some students wanted to be able to manage hobbies or
sports organisations.

Their first problem was to design their database, then
they wanted it in action as quickly as possible. Existing
textbooks were expensive, did not deal with design, and
contained more than the basic essential information.

The notes I wrote as courses proceeded have
been compiled into a learning guide for those who want to
build a database quickly.

Should you be interested in a copy of the learning guide
"Design Databases and Drive Microsoft Access"
the cost is US $29.95, which includes package and postage.
Just send a cheque or credit card number, expiry date and name.
Do not forget your name and address for postal delivery.

My address is:

Robert Shaw
49 Sea Vista Drive
Pukerua Bay
Porirua City
NEW ZEALAND

Comments on the usefulness of the book are most welcome.

Propagation Forecast Bulletin 3 ARLP003
From Tad Cook, KT7H
Seattle, WA January 17, 1997
To all radio amateurs

SB PROP ARL ARLP003
ARLP003 Propagation de KT7H

Average solar flux and sunspot numbers for the past week were almost unchanged from the week previous, but there was some noticeable geomagnetic activity. A coronal mass ejection from the Sun on January 6 caused a disturbance four to five days later when a magnetic plasma cloud caused a severe storm at high latitudes. The planetary K index rose as high as 6 on January 10 at 0600 and 0900 UTC. The planetary A index for the day was 31.

Over the next few weeks the solar flux should stay around the low to mid-seventies, probably 72 to 74 most of the time. Some slightly unsettled conditions may appear around January 26, and again from February 3 to 8, with some possible unstable conditions on February 6 and 7. Expect 160 and 80 meters to yield some good conditions with solar flux low and the nights long.

A wire service story this week said that scientists from NASA and the astronomy department at Yale University presented findings at a meeting of the American Astronomical Society in Toronto which predicted a decrease in overall solar activity for the next solar cycle. They admitted that their forecast is at odds with many other predictions, and that solar activity is highly unpredictable, but said that if their prediction is correct, it will reverse what they claim is an overall 400 year trend toward greater solar activity.

Sunspot Numbers for January 9 through 15 were 12, 13, 12, 0, 0, 0 and 14 with a mean of 7.3. 10.7 cm flux was 73.7, 75.4, 74, 74.5, 74.6, 74.9 and 75.8, with a mean of 74.7. Estimated planetary A indices for the same period were 6, 31, 13, 10, 5, 4, and 4, with a mean of 10.4.

>OK, can you still talk on the bands that you use CW on?

A No CodeTech can't do CW anywhere!

A "regular" Tech Plus can talk on the 10 meter SSB sub-band as well as send CW on the CW portion of the sub-band, but has no phone priveleges at lower frequencies even though he does have some CW priveleges.

Outside of the addition of 10 meter SSB phone for Tech Plus class, little has changed in regards to CW & phone priveleges in the same band in these classes in the last few decades.

> Consider two amplifiers of equal output
> as measured on a Bird 43P.

> With the reduced conduction cycle in class C wouldn't the output
> power be less even though the Bird says otherwise?

No. The average input power will be less, but the output power will
be as measured by the Bird. RF power from a amplifier operating
unde class C is no more potent or penetrating than that from on
operating under classes A, B or AB.

The one minor wrinkle to that bald statement is that the Bird will
measure total power, including that of the fundamental signal and of
any harmonic signals present. And as the class C amplifier may have
more power in harmonics at its output it will therefore have an equal
amount less power at the fundamental. But the impact of this will
not make any practical difference and is of academic interest only.
The amounts of power allowed in spurious signals is so much less
(each must be less than -30dB even at HF QRP) than the principal
signal that the Bird reading will not be affected by their presence.

If one will look closely, it can be seen that what I posted on the news group has 3 question marks following the words (FCC, SCREWING US OVER AGAIN). Hence, this would make what has been misconstrued as a statement, a question. (Third grade English)!

Also, it seems that because of this response of Mr. Newkirk's along with some hate mail I've received, that it's the messenger that's getting the brunt of the disagreement rather than the message...Or the author for that matter. If ANYONE wishes to exercise their first amendment rights to the Constitution of the United States, please direct your comments to the author, NOT the guy carrying the message...n6jsx@juno.com is where your commentaries need to be directed.

Also, on the WWWeb page I point to in reference to this topic, it can also be noticed, if READ, that this statement is "...the OPINION of..."!!! Another first amendment right.

"Or even put up the tower (or other obvious antenna, etc.) and wait for a week or 10 days. Sometimes the appearance of an antenna will cause you to be accused of everything wrong in the neighborhood. If you haven't been operating, it (probably) isn't your fault - except for PFI (psychic freakquency interference)

Dan, K8WV"

There was presumably a report of a person in Michigan who complained to the police that a neighbor put up a "signal sucker" that took all the TV signals out of the air. Heh, maybe there's more to these antennas than the mfgs are telling us.

A label would help "Improper installation and use of this antenna may void the warranty and result in a general loss of all radio frequency signals to surrouding areas, a phenomenon known as 'signal sucking' -- please consult the instruction manual for proper installation and maintenance of this device."

1275. PicCon Hidden Transmitter Hunt Controller

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-17 00:00:00 UTC
From: byon@netcom.com
Message-ID: <32dede9b.10068730@news.hlc.net>
Source record: 206991

Greetings to fellow T-hunters and T-hiders,

I have recently created a new microcontroller-based hidden transmitter controller called PicCon. It connects to a radio transceiver and produces tone sequences and Morse code messages at user-programmed times. It is completely field programmable via DTMF tones, remembers all options even when power is removed, runs off a 9-volt battery (or any 7-35VDC source), and is quite compact (1.9" x 1.7" PCB.) PicCon also supports synchronized multi-transmitter hunts, and can operate under IARU T-hunting standards. Look for it in the March 1997 issue of 73 magazine in Joe Moell's Homing In column.

Kits are available, which include a manual, and all parts necessary to build the printed circuit board, excluding a chassis. A power/radio interface cable is also included, but must be wired for your specific radio. Kits are $49 plus $2 S/H and can be built in about 30 minutes.

Further details can be found at the PicCon Web page where I have on-line copies of the User's Manual in PDF, HTML, RTF and TEXT formats. If you do not have web access, I would be glad to eMail a version to you. The web page URL is:
http://www.kvoa.com/byon/piccon/
Additional questions can be directed to me via eMail.

Thanks, 73, and good hunting (and hiding.)

>

Oh, c'mon, Ed. The sky's not black at night. You can see the sky
color shift toward the infrared as the sun sets.

Apparently (I'm applying for a grant for this) at some point the color
spectrum actually folds and you can see the sky shifting downward from
the ultraviolet in the morning. This seems to be related to the well
known Theory of Spherical Electromagnetic Continuum - or as it is
perhaps better know "What goes around comes around."

Thus, black coax simply won't do it. You need coax of an appropriate
color in the infrared or ultraviolet, depending on the time of night.

If you like, I can send you a can of ultraviolet paint - if I can find
it. I thought I saw it in the basement, but maybe not.

The Mission of the MARS system is to:

a. Provide auxiliary communications for military, federal
and local disaster management officials during periods of emergency or
while conducting drills in emergency procedures.
b. Assist in effecting normal communications under
emergency conditions.
c. Create interest and furnish a means of training members
in military communications procedures and provide a potential reserve of
trained communications personnel.
d. Handle morale and quasi-official message and voice
communications traffic for members of the Armed Forces and authorized U.S.
Government civilian personnel stationed throughout the world.
e. Provide, during daily routine operations, a method of
exchanging MARSGRAMS and two-way telephone contacts between service
personnel and their families back home. In carrying out this assignment,
MARS operates a 24-hour message relay system and maintains a series of
electronic mailboxes throughout the world.
f. Conduct daily traffic and training nets, drills and
critiques to train operators and test the systems readiness to handle
demands during an emergency.

I just checked the FCC FTP site and WED.ZIP was there. It was posted this afternoon. It contains two new vanity calls. N2CM and W2FPX.

I don't understand what is going on here and why Roxanne at the FCC would tell me the computer is down and won't be back up until around March 1st. Maybe she was misinformed.

Anyway, check out W2FPX and you will see, via:

http://www.arrl.org/fcc/fccld.html

that this is a Tech Plus vanity call. Then look at this person's birthday. It seems unlikely that he ever held W2FPX. I wonder why he was assigned this call. Maybe the FCC's computers are not operating properly.

In this case the computers were working fine. W2FPX is flagged
as "B" elgibility. (close relative) It is essentially a "Gate 1" vanity
call
which were for previous holders ("A" flag) or close relative ("B" flag)
It is a "Group C" call for which technician class licensees are elgible.
Just that it is an older Group C call.

Re this comment:

>Well, in the area of RFI, the ARRL has always recommended to hams
that if they put up a new tower, they should not connect the
transmitters to the coax until they take care of all the RFI! :-)

>--

>73 from ARRL HQ, Ed Hare, KA1CV, ARRL Laboratory Supervisor

If they don't hook up the antenna, there will be a significant
reduction in RFI to nearby devices (like neighbors). Another solution
is to operate into a 50 ohm dummy load -- if it is a pure resistive
device, the SWR will be flat over the entire band, and the RFI will
be significantly reduced. But so will the results.

Basically, how can one "take care of ALL the RFI" before connecting
the coax to the antenna?

Is the ":-)" meant to be friendly, or to signal a spoof? It has to be
the latter.

Jeff

PS: Has anyone done emissions tests on street lights or automobile
headlamps. What is the db gain of an automobile headlamp over a
filament hung out in space with no reflectors or directors? One of
the concerns people should also have is travelling or worse, living
at higher elevations, where the protective layer of the atmosphere
thins and solar energy is significantly higher. What is the
additional exposure risk to solar energy if one is at, say, 1000 ft
amsl? It's not zero, but is it risky enough to require a disclosure
in real estate sales contracts or to require cities to post signs
warning of the additional health hazards, especially cities that
invite tourists who might not be aware of the potential risks? Like
Aspen, or Teluride? "You are entering Colorado at your own risk!"

My turn for the --> ;-)

Hi DX mates,
thanks for reading this message, which deals with a software tool
that's gonna help you while DXing.
At last the DXTelnet software pack is available and ready to run.
If you use any telnet application to connect to DXClusters directly
via the Internet, please read what follows: you'll find something
interesting for you.

You can download DXTelnet from:
http://www.funet.fi/pub/ham/hf-work/
file name: DXT10ENG.ZIP, size about 640K

DXTelnet is a DXer oriented, Windows based Telnet application which
finally fixes the problems found in traditional telnet applications and
adds unique features, to help Power DXers when connected to DXClusters
directly via the Internet.

DXTelnet Features

*Alerts:DXTelnet can be linked to DXHUNTER 5.2, to get alerts on spots
coming via the Internet

*Aux Comm Port: remote control can be activated via a comm port

*Customizable Colours: set the colours you want on any window

*Customizable Windows Size: hide/show/size the windows as you want

*Easy Text Send: no longer problems with the BACKSPACE key!!!

*Keep Alive: this function fights idle timeouts

*Links To Other Applications: to DXHUNTER or to any other program via DDE

*Macros: up to ten strings can be set immediately with Alt+0-Alt+9 keys

*Multiconnection: this program was born to operate in multisession:
ALL the spots, from ALL the sessions, are displayed in EACH DX window,
without duplications.

*On Line Help: simply press F1 and get context sensitive online help

*Paste TX: send large bulletins in one shot

*Sounds And Voice Spell: even on the PC Speaker!

*Split Screen: TX RX DX TALK ANN are collected in 5 different windows

*Spot Filter: exclude unwanted spots

*Spot Multiformat Support: both Pavillion and Clusse spot, talk, ann formats are supported

*Talk Auto Answer: you can set your own text string to be automatically sent to incoming talks, when you're not in the shack

*Talk Management: review talks in their window or have the talks remarked when operating in multisession or in background

*Text Capture: archive entire sessions, or received text portions

*Text Search: search for text on any window

*Window Scroll Back: no longer messy results when scrolling any window back

These are the main functions; discover the other ones, by using this unique program.

DOWNLOAD AND TEST IT NOW!!!

At the same site, you can find also the latest release of DXHUNTER (5.2) which can be linked to DXTelnet, to get alerts on needed spots.
The name of the file is DXH52ENG.ZIP, size about 1M
ENJOY!

to contact me:
E-Mail : vmi@vmi.it
Radio BBS address: IK4VYX@I4UJB.IEMR.ITA.EU
DXCluster : AC4ET (ex NO4J) between 9 and 17 UTC of working days

As recently we've experienced some problems with the E-Mail server, if you get no answer within 4 days (Mail is not explored on Saturdays and Sundays), please, resend your message.

We're working to make DX softer...

Well, you've gotta look at the rest of the line in indiv.dat to see why!

W2FPX|9610218924475015|C|KB0WVM|P|N| |B|V

This one has a flag_eligibility code of "B", meaning
B Close relative of primary station holder
And he's a she... See appl.dat

W2FPX|9610214024|S|I|MANN, SHAREEN E|1546 CLEAR AVE| |SAINT PAUL|MN|55106|Sep 14 1972
12:00:00:000AM|970115|070115|970115|LGW||

Nothing fishy here; W2FPX is a perfectly fine Group C callsign, for which Tech
Plus is eligible.

Incidentally, the point some of us have been making is that you have to make
sure to check appl.dat, not just indiv.dat, to pick up the type_purpose code.
This one is code "S",
S Special callsign change
so that is a new vanity callsign grant. The other one, however, W7YV, is
type_purpose code "D", or
D Change mailing address
and so is not a new callsign grant.

See the readme.txt in the ftp area.

W2FPX can be assigned to a tech plus license according to the FCC
rules under which the person is a close relative of former
holder now deceased or it was a request in memoriam. Tech plus
is eligible to receive a group C or D call sign, which includes
the W and a three letter suffix.

Necessary? Probably not going to do that! However, it would fall into the same category as any other club in the college. First, find a faculty member to get behind the program, as a minimum, hopefully a ham. This will make sure that the club will be long term, long after you graduate. Then, post notices (electronic and printed) in the areas that hams and potential hams would see them (science area, library, campus newspaper) to get an informational meeting scheduled, and get organized BEFORE you go to the Dean. With a list of prospective members and faculty backing you should do fine.

I'm mailing a copy of this also to you...

: Please email me directly; I don't subscribe to this list, and I'll post =
: a summary.

i'd tend to say that the existing books might be preferable to
using a computer for basic studying of the material. computer
can be handy when running test drills to see how you're doing.

steve, steve, steve...go back and reread the rules...you can do code
everywhere
even tho it may not be welcomed...

certainly someone with a tech license could use machine sent code to
send code (there are morse keyboards and programs for computers..) and
for receiving, if the sender is either good or also using a keyboard,
you can get electronic decoders for the code.

> A "regular" Tech Plus can talk on the 10 meter SSB sub-band as well

novice too...

> little has changed in regards to CW & phone priveleges in the same
> band in these classes in the last few decades.

a few decades? a few decades is the entire existance of amateur radio.
how about the 40 m band novice band move? the 80 m band move?

i guess we could even include the opening of 15 m if we cover a few
decades...

>
>With the reduced conduction cycle in class C wouldn't the output
>power be less even though the Bird says otherwise?

No. The Bird 43P can't track individual RF cycles. It responds to average power at that level. The peak reading feature can respond at a syllabic, IE audio, rate for SSB speech, but that's a different thing than Class A versus Class C which is differentiated by conduction angles at the individual RF cycle level. So with no modulation, and you ask that we disregard modulation, the Bird 43P reads the same thing as a plain Bird 43, IE average RF output power. If the meters read the same, the two amplifiers are putting out the same average power.

The output tank circuit of a properly designed Class C amp acts like a flywheel and generates a full RF sinewave from the kicks given to it by the active device. These kicks are very strong, but of short duration with respect to a RF cycle for a Class C amp. They are not as strong, but of full cycle duration for a Class A amp. The resulting power in both cases corresponds to the area under the conduction curve, and that's the same if the wattmeter reads the same.

If we didn't use tank circuits for our Class A and Class C amps, the Class C amp would output a series of pulses rich in harmonic content. Since the Bird isn't very frequency selective, it would sum them all to show output power, but much of that power wouldn't be on the desired channel. But the FCC won't let us radiate lots of harmonic energy, so we do use a tank circuit with sufficient Q to reconstruct the fundamental sinewave from these pulses, and the energy read by the Bird is on-channel energy, the same as if it had come from a Class A amp.

For a constant amplitude drive signal, A Class C stage's output will be indistinguishable from that of a Class A amplifier thanks to the flywheeling of the output tank. That's why a Class C amp works fine

for FM, RTTY, CW, etc. For a drive signal varying in amplitude at a low rate, IE SSB speech, the Class C stage acts as a limiting amplifier, IE when it turns on it is on as hard as it can go, and when it is off it is completely off at the audio rate too, but the tank can't reconstruct the audio sinewaves, only the RF sinewaves. So it will generate tons of audio distortion attempting to follow the low rate modulation, but it won't generate less output power, just less *useful* output power since much of the output will be useless distortion products.

There is a way to "have your cake and eat it to", and that's a Class D amplifier. It also is a limiting amplifier in that it turns hard on and hard off, but the duty cycle of the on/off pulses at the RF cycle rate is varied at the audio modulation rate by a special input circuit, so that the output waveform after reconstruction by the tank circuit follows the input modulation faithfully. This has very high efficiency, but a more complex driving circuit than the Class C amp. Again, a Bird at the output would read the power out the same as for any other class amp.

Sure, just be sure you don't check the block asking for a new call sign on the 610 and they won't change it. I could have kept my old WA4 call when I upgraded back in 82, but I never liked it and checked the block. Considering what I got, I should have kept the old call. The old call was WA4VJZ and people had trouble with the V and Z, so I figured I'd get something else. When the FCC saw that application, they must of said to themselves, "Oh, look, here's old Z's and V's, lets fix him up." So now it's KE4ZV. Arrrgh! You can't win, you can't even break even. Oh well, I'm kind of attached to it by now.

Excellent rig. Easy to operate, great receiver. Like a lot of
decisions, it depends on the price because just as the '761 is one of
the best rigs ever, there are better ones, but you'll pay a bit more.
You really can't go wrong if you buy it right. I'd probably pay about a
$900-1000 for a good one, but the prices vary all over the map.

Hi,

This subject is really very simple.

Most people wouldn't think of going into a store, taking software
off the shelf and leaving the store without paying for it. That
is stealing, right?

When you take something without permission, or without paying
for it your stealing - therefore you are a thief. Is this not
correct?

Why is it ok to steal from the software author, when you wouldn't
think of stealing from a merchant?

Some will say, I bought the software - I'll do what I want with it.

Sorry, this is NOT the case. You made an agreement before you began
using the product.

When you "buy software" there is most always a license statement,
or license agreement, by which you must agree to abide before
proceeding to "install" said software. This statement gives you
the right to "use" the software, not own the software.

(This is sort of like the difference between renting and buying
a home...)

You gave your word, and agreed to these terms before you began
using the software. You most always have the option to return
the product if you can't agree to the terms.

Here's a web site with some interesting facts on the subject.
(this site may be gone now?)
http://www.bsa.org/piracy/piracy.html

Please don't take food from the table of these hard working
individuals. Instead, help educate others. Software prices
will vary with supply and demand. More sales means lower prices
along with new versions.

Most software pirates haven't thought through what they are doing.

Thank you very much for your time and thanks also for your help.

73,
Jim - KU5S

There's a fellow here in the Carson Valley area of Western Nevada who had KB7UUK. He didn't like the UUK, so he studied for his Advanced and applied for a new 2X2 callsign. He got KJ7UK. Sometimes there ain't no winning! :)

Hello...

If you have a RADIO and a SOUND BLASTER (or compatible card) you already have all the hardware necessary to receive WEFAX, FAX, SSTV and RTTY.

You can also transmit monochrome FAX and SSTV, with the current version.

*** Put the power of your 80386, 80486 or Pentium processor to real use ***

The external "decoder" units that are used by conventional users are modelled inside the software. This makes it easy to get started, inexpensive and rids you of the inevitable tangle of wires and boxes of decoders.

Absolutely no external hardware, other than a simple audio lead, is required by FTV. The current version decodes:

WEFAX (from weather satellites, e.g. 137-138 MHz)
HF-FAX (from terrestrial stations)
SSTV (from radio amateurs, e.g. 14.230 MHz)
Baudot (press, naval, weather etc)

Here is a run down of the more interesting features:

(1) It keeps the demodulated signal in memory, so that the signal can be analysed again at a different keying rate or polarity! Garbage can be resampled on the fly, which means that minutes of received signals decoded at the wrong baud rate or keying polarity are recovered, on the fly, while still receiving.

(2) The incoming signal is analysed automatically - standard modes, line rates, baud rates and keying polarity are automatically determined following analysis.

(3) Tuning oscilloscope available at all times, without loss of copy.

(4) Program works in real time.

*** What are you waiting for? Try it now! ***

Take a look at my web site for futher details, from where you can download an evaluation copy, at: http://www.geocities.com/SiliconValley/2504

Be fore warned! A registered copy costs US$ 25, but after all, registered promotes the further development of this and other software while giving you the right to acquire all future versions paying only for delivery

expenses, if any.

Fianlly, just in case some of you have trouble accessing my web site, here is my postal address (if you want a reply, send a self-addressed label and IRC's to cover expenses):
Brian E. Cauchi,
Gawhra, Domenico Cachia Street, Birkirkara BKR06, MALTA.

What can I say? Try it, and may you have as much fun as I am having...
73's from Brian.

I'm planning a thru-hike of the Appalachian Trail from GA to ME this summer, and have a question about coverage.

Would a 2m HT (5w) be the best choice to minimize the number of times I might not be able to hit a repeater? I'll be carrying the HT for emergency use only.

Please post, or email me if you have any advice, including recommended models that are light weight.

Thanks for the help,
dan

A few years ago, me and this other station had a full-blown CW QSO on
20 meters, on SSB. Another time, I got another station to do a QSO
with me spelling out each and every word in phonetics, adding the
punctuation in voice CW. As we got bored with that, we began spelling
each phonetc in phonetics. Never got thru the QSO, we started laughing
too hard! I guess that's one of the reasons I'm inactive now, I just
didn't fit in.

Mark, in a hobby now where everyone's at least a LITTLE nuts.

I agree with Burt. Most conversations are boring. You exchange rig/antenna data, weather reports, locations, names, ages, years one has been a ham, health problems, (if you have any) and of course call signs. After the standard "boilerplate" information has been obtained, what's left to talk about?

Hams have the whole world as a stage and they don't realize it. Why make it boring? Why not try something different? Here's some of my ideas, (and they're all legal)

1. Have a QSO using a cartoon voice.

2. Talk with different accents.

3. Ryhme every time.

4. When someone asks about the weather, answer with, "Hey, I ain't goin' out there!"

5. Make up weird stuff for your station equipment. (i.e. "I running 100 watts into my spouting")

6. Emote.

These are just a few I could think of off of the top of my head. If anyone wants to add to the list, feel free to do so. In other words, don't just have a QSO, give a performance! After all the world *is* your stage.

If I have the time, I might even work the North American Sprint using some of the above.

Whatever happened to NQ2C? He was a perfect example of this. A true master.

The question was answered on one of the CB groups. Neither is superior,
for it's purpose. In other words, Class C is fine for CW and FM. Class
A is not used for RF. The distortion caused by a Class AB1 amplifier is
generally recognized to be acceptable for AM and SSB.

Hi Dana. Thanks for the tip. I did have to tweak the supply's paint job a little. I remembered that from my General exam. Actually, the real problem started after switching to the 40 amp brute. And believe me, it's a little embarrassing that I overlooked such a basic technical principle. I am of course talking about forgetting to match the supply to the intended operating band. I still don't understand why just about all supplies are either designed for the 2 meter band, or even stranger, the 1 meter band. The modification was made even more complicated by the fact that the radio it would be used with was a multi-band HF rig. As I reasoned the lowest frequency band I'd be operating on would be 80 meters through my 80/40 dipole, I was still faced with the dilemma of finding a way of mounting 80 individual meters into the supply that could be removed to retune the supply for operation on the higher frequency bands. I decided to go with the smallest meters I could find, the little circular battery check types available at Radio Shack. The first attempt didn't go so well - the case looked like a warship that'd taken one too many 16 inch salvos. I solved the problem by making a new cover for the supply out of wood that I painted to match the rig, and mounted the meters into small plug ins in groups of 5. The rest is DXCC history!

The moral of this tale is I have way too much time on my hands. I wish it'd get warm, I've got to go CLIMB something!!!

This thought had crossed my mind. Still it's better than nothing. I think that the burden of proof is on the plaintiff anyway. I would think that they'd ahve to have something more than just a picture of an antenna farm. Wouldn't *they* have to prove you were actually transmitting? Wouldn't have to prove that you even have any radios hooked up to the antennas at all?

It all seems to be a bit silly worrying about something that might never happen, but with a large number of kooks and ambulance chasers out there, one can't be too careful.

I mentioned this to my insurance agent as well. she said that while a homeowner's policy covers liable for injuries on your property, she knew of no policy or even a rider on any policy that would cover such a lawsuit, but she was still checking into it.

I ran across this item on the CNN web site and thought it might be of
interest to amateurs...

At the bottom of a story titled "Couch potatoes go cyber" there was this
sentence:

"Another big hit was an update to the classic "Walkie Talkie" thanks
to Motorola. The new gizmo has a range of over two miles and
operates on a new set of frequencies that have been set aside for
family use."

To see a picture of the new radio, this is the URL:
http://www.cnn.com/SHOWBIZ/9701/17/tech.guide/walkie.talkie.jpg

The entire article is at the URL:
http://www.cnn.com/SHOWBIZ/9701/17/tech.guide/

In Belgium it's free..... If you have a licence in one of the (many) countries that signed the CEPT treaty you can go there WITHOUT applying for a reciprocal licence (hence no paying). I can go all over Europe without formalities..

On the other hand.... We pay abou US$ 60.00 per year for our licence and abou US$ 30.00 for the amateur test (only twice a year and NOT by VE's).

>>I do agree that the US should charge for reciprocals. In fact, I

If more countries would sign the CEPT treaty there would be no more administration costs for issueing reciprocal licences and life would be a lot easier for us hams whenever we cross the borders with our equipment...

BTW. I understand the US is considering to join (maybe witin this year..??)

Hello Dave:

Last time I was in LA I listened in on the 147.435 machine. I didn't hear
any of those guys on there - mostly CB-type garbage.

The good "shows" are no more. They pretty well stopped around 1984. The
FCC was "asked" to clean it up for the summer Olympics and it was never
the same after that.

I heard that Richard Burtun (ex-WB6JAC) attended a VE session, wrote and
passed the tests and was issued a new call, but the FCC took it away when
they found out who he was.

Not quite true. After all CW is authorized one all bands. Plus all Techs coded or not have full access to the 6 & 2 meter bands; bands that contain the only specific CW only segments. I was beeping there long before I submitted to my CW hazing exam.

That's a depressing thought. So amateur radio is just a CB service
that beeps, eh? Well, HF often sounds that way, but I doubt it was
the government's intent when Part 97.1 was written.

>Don Lafontaine

Yes, Don, N9ZLE has an email address. He has a web page also. But before you jump off the deep end, maybe you should do some homework. I bought an interface from N9ZLE a few months ago, and it included a diskette with Hamcom 3.0 and another shareware program. The shareware notice had NOT been removed from the version I received.

As a programmer you should know that there always have been and always will be people who don't pay for software, regardless of if it's 'shareware' or 'buyware' or whatever. And unfortunatly there will always be software that people DO pay for that isn't worth the price of the diskettes it came on. Hence the term 'shelfware'.

I don't know N9ZLE personally, but I see absolutely nothing wrong with what I got from him, software or hardware wise. And I would like to add his service was excellent.

The policy group was supposedly STARTED to keep the debate out of the other ham groups. When most of us were told that, we moved it to policy. But you, as usual, refuse to conform to anything. Why don't you start cross posting all your no code stuff to alt.sex.with.animals, you never know, there might be some no coders over there and I am SURE that newsgroup is carried by more ISP's than the policy group is.

>Give me a break! This is USENET ... it's supposed to be free speech, not
>"Jeff doesn't want to talk about no-code (or have others hear
>about/participate in
>or (heaven forbid) *support* it ... so we have to bury it in an obscure
>corner."

One newsgroup is no more obscure than another, Carl. And most newsgroups were formed to carry discussions about certain things. Thats why there are so many of them. If they were not intended to hold different subjects, then maybe you can explain to us why there isn't just one BIG newsgroup called NEWS.....

>If you think that having code/no-code debate threads in .misc is going to
>cause any consequential damage to anything, you've got some VERY wierd
>views on live and what's of consequence.

Sure it causes 'damage'. It causes the newsgroup to be frequented by a bunch of internet freaks, jerks, and wierdos, and it causes any normal people who are hams and who came here looking for some normal ham discussions not to come back. Hence the quality of what is available here remains zero.

>Give it a rest and stop trying to tell others what to talk about (or where)
>if you don't want to see/hear/read it, simply ignore it ...

You need to give it a rest, and try conforming with the rest of the world, instead of insisting the rest of the world all become little Squiggies......

Oh poo, Burt!

You say we can't talk about this stuff, but we do! =-o

Please tell me why you complain about hams & state you are no longer a ham. BUT, you still have your ham call on your postings & homepage & is that your daughter that is a ham.

CONFLICT, NO LOGIC, WHAT'S THIS ALL ABOUT? ;-)

BTW, your homepage is very 'hammish', it does some griping, it tells what you've done in your life & doesn't tell where you're going in life.

So, what did make you decide to go from broadcast work to teaching?

KP

>one's entry into HF?

If that were universally the case, it would still be irrelevant since it has no relation to government's legitimate interests. But it isn't universally the case. Now most amateurs represent a self-selected sample of the population, IE those who couldn't pass a Morse test didn't become amateurs until recently. We have no good idea of how many tried and failed. All we can really say is that about 0.18% of the US population has been able to pass the Morse speed test at 5 WPM, and about 0.012% have been able to pass at 20 WPM. Among current amateurs, who are obviously more motivated than the general population, only 5.4% have passed a 20 WPM exam.

What does that say about the difficulty of passing a Morse exam? Well, lets look at something else and see how self-selection can distort figures. Approximately 10% of the US population, about 30 million, write with their left hands. If we required amateurs to write with their left hands, what percentage of amateurs do you think would be naturally left handed? I suggest it would be nearly 100%. They'd tell you it is *easy*, that anyone can do it with a little practice. That's the same sort of argument those who are fluent in Morse raise. But to a right hander, writing with the left hand is *not* easy, and a little practice won't suffice to make it so. I'd suggest the same sort of mechanism is at work with regard to Morse, IE those with a natural ability for copying Morse dominate amateur ranks due to self-selection. Thus their opinions on the ease of passing such exams are biased.

>In one hour of evening commercial TV viewing, one watches about
>twenty-five minutes of commercials, program intros, trailers and other
>jingles. If fifteen minutes per night for learning CW is too much, then
>I do not understand how one could find the time to watch the TV, with
>all its commercials, let alone do any ham activity.

In one hour of prime time, there are 6 two minute commercial and promotional pods within the program, and two 90 second local station breaks, for a total of 15 minutes. Those 15 minutes are usually the most entertaining part of the hour since much more effort and expense went into their production on a per second basis than the putatively entertainment portion of the hour. But that is also irrelevant. I didn't even have a TV back when I was conditioning myself to be a Morse modem. That lack didn't make it any easier. And I was spending, not 15 minutes, but 2 hours a day on Morse. It still took 13 months. Am I more typical of the US population, or are you? We don't know, but from the percentages noted above, it could be me.

The only reason I'm an amateur may be that I'm just more mule headed stubborn than the average person. And that isn't necessarily a positive trait. It certainly isn't a trait that a government would look for in a subject who they want to bend to their will, IE who they want to blindly follow arbitrary regulations. It is more the trait of an ornery cuss who will agitate against their arbitrary requirements indefinitely until they are rationalized to correspond with the legitimate purview of government regulation.

>I make it a point not to debate "cocktail party science". :)

Indeed, you prefer to use inuendos of conspiracy and dispicable guilt
by association smear tactics to convey your employer's point of view.
Your arguments are reminiscent of those of tobacco industry lobbyists.
It would be refreshing indeed if you'd even come up to the level of
"cocktail party science" in your pronouncements. That would be a
major step up from what you've written so far.

Note well that I'm posing no defense for the new FCC RF exposure
standards. They may be strict enough, they may not be. What I am
protesting is your tactics in opposing those regulations. If you
have a real science based case that the regulations are imprudent,
then lets see it. Dire mutterings about conspiracy and slurs based
on guilt by association don't cut it.

Actually, if you haven't trademarked it, I could use W2TG as a label
for a business product. That you have it as a call sign is an irrelevancy.
If I use it for on-air promotion in the amateur service, however, I run
afoul of FCC regulations.

>You know if you expended the same energy towards learning the code
>rather than trying to weasel out of it you might find out a couple of
>things.

I spent far more effort learning it than you probably did bub.

>1. Its not that hard to master the Morse code. Most of us did it!

Self-selection bias. If the requirement were writing with the left
hand, most amateurs would be left handed. That proves nothing.

>2. Its actually fun to use! Its radio at its most basic level.

Irrelevant, and fun is not a rational basis for regulation.

>3. It is actually quite conservative of radio spectrum.

If you have little content to convey, it can be considered conservative,
but if you use a relevant metric which includes conveyed content, it is
most definitely not conservative of spectrum.

>4. It is an international language so you can communicate with folks
> evn if you don't speak a word of their language. Work some DX!

Bull pucky! Morse is an encoding of the Roman alphabet, Arabic numerics,
and some punctuation, nothing more. It is no more a language than ASCII
is a language. It can be used to *spell* words in a language, any language,
representable by that alphabet, just as ASCII can, but that's all.

>Maybe you can understand it better if I put it like this. You want to
>join a college fraternity and have to endure the pledge procedures. You
>have to do things to prove that you are worthy of membership in that
>fraternity you have chosen to join. You may not like or understand these
>things but you do them anyways in order to become one of them.
>
>Same thing here!

It is most definitely *not* the same thing here. We're talking about
a Federal license, not some fraternity. If I find the rites of some
fraternity unreasonable, I am free to form my own group and operate
under its umbrella. But if I find Federal law unreasonable, I am not
free to form my own group of laws and operate under them. Thus law must
be held to a higher standard than the obscure rites of some fraternity.
It must serve a compelling and demonstrable public interest consistent
with the compact between the citizenry and the goverment, or it is an
illegitimate exercise of government force.

In this proximate case, we are dealing with the regulation of access to a commons. Under English Common Law, a commons belongs to all citizens as part of their heritage or birthright under the doctrine of The Common Heritage of Mankind. We cede to government the privilege of managing that commons, our property, for our benefit. Any regulation which is not beneficial to our public interest is therefore illegitimate.

In general, the compelling public interests on which commons management are legitimately based are maximization of utility while limiting to the extent practical conflicts between users of the commons. In the case of a consumable commons, such as a grazing area, additional limitations may be required to prevent permanent diminuation of the resource. But for the spectrum, which cannot be permanently injured or consumed, such additional limits aren't warranted.

There is no longer a compelling case for Morse speed testing as a legitimate management tool of the spectral commons. Once there was, when Morse was the only way to warn off users of the spectrum causing harmful interference to others, particularly life safety services. But life safety services have abandoned Morse, as have virtually all other users of the spectrum except a few hobbyists who don't have a compelling priority to the spectrum, so the requirement no longer has legitimate purpose.

You should hear my CB/HAM radio garbage-peter in Los Angeles. The 147.435 'peter is the scourge of the ham community. By promoting a "double standard" of rules , I encourage lids and jammers on one hand, then try to be so HiHiOm on the other. Result? Utter caos and I like it like that. These losers, unemployed, perverted, jamming SOB's are what keeps the old woodie stiff for me. What else is pretty neat, is I have a bunch of no-code techs that work on the box for me since I'm lucky to be able to program my autopatch. They rountinly go up to the box with there "golden screwdrivers" and when they are finishe, the box usually goes to 10 watts making it useless...Hee Hee.....

Anotherthing, I hear some of you bastards don't like me and my family hogging all the club calls i want. I only have 20 or so so if you don't like it, you can just kiss my wrinled old butt...

73,

Roy Tucker, N6TK

>I wonder if you often hear DE which is closer to you, but has
>the lowest number of licensees?

Hans, I also think it is a combination of the two.
DE ha a very low population but I hear it more often than UT , NM , NV
(as a matter of fact I have just received a QSL from DE).
What really make my wonder is that AZ , for instance, has 14344
licensees and I NEVER hear them (or at least VERY seldom).
What do they do primarily ? I guess most of them are active on the HF
bands but in spite of this they are seldom heard here (I have a 3 el
beam).
So I think the distance and maybe some other reason might also play a
significant role .Australia is easier from here , but much farther .
Indonesia , East Russia , Argentina , Brasil are also easier but about
the same distance than southwest US.Yes , maybe these countries have
highers number of licensee (not really sure about the density) but
signals are usually stronger.
There must be some other else (a sort of highway for radio waves that
makes easier a contact in one direction than in another)...who knows
????!!! :-)
Thanks Hans for your report on licensee number on the variuos states,
it is quite interesting.

1343. Alpha Bravo phonetics: the quickie version

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-18 00:00:00 UTC
From: Brian.Kelk@cl.cam.ac.uk
Message-ID: <5br98q$bh7@lyra.csx.cam.ac.uk>
Source record: 206896
Cross-posted to: alt.usage.english,sci.lang,rec.radio.amateur.misc,rec.radio.info

Phonetic Alphabets (Alpha Bravo etc)
(brief version)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets, spelling alphabets and telephone alphabets.

I have a collection of alphabets for many languages which
I post occasionally, but as that now amounts to over a
thousand lines I here post a brief sample.

Brian Kelk bck1@cl.cam.ac.uk
18 January 1997

That famous alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

(It is approved by various official bodies but note the
variant spellings Alfa Juliett Juliette Oskar Viktor.
It dates from about 1955 and is used in air traffic control,
amateur radio and many other circumstances.
One of its titles is the NATO Phonetic Alphabet.)

An earlier alphabet (used by U.S. Navy up to 1954):

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

A French alphabet:

Anatole Berthe Ce'lestin De'sire' Euge`ne Franc,ois Gaston
Henri Irma Joseph Kle'ber Louis Marcel Nicolas Oscar Pierre
Quintal Raoul Suzanne The're`se Ursule Victor William Xavier
Yvonne Zoe'

A German alphabet (used by emergency services):

Anton Berta C"asar Dora Emil Friedrich Gustav Heinrich Ida
Julius Kaufmann Ludwig Martha Nordpol Otto Paula Quelle
Richard Samuel Theodor Ulrich Viktor Wilhelm Xanthippe
Ypsilon Zacharias

"Arger Charlotte "Okonom Schule "Ubermut

Two Spanish alphabets:

Antonio Barcelona Carmen Chocolate Dolores Enrique Francia
Gerona Historia Ine's Jose' Kilo Lorenzo Llobregat Madrid
Navarra N~on~o Oviedo Pari's Querido Ramo'n Sa'bado
Tarragona Ulises Valencia Washington Xiquena Yegua Zaragoza

Amalia Beatriz Carmen Domingo Enrique Federico Guatemala
Honduras Ida Jose' Kilo Lima Llave Me'xico Nicaragua N~on~o
Olimpo Pablo Quito Rafael Santiago Teresa Uruguay Venezuela
Washington Xilo'fono Yucata'n Zorro

An Italian alphabet:

Ancona Bologna Como Domodossola Empoli Firenze Genova Hotel
Imola Jersey Kilo Livorno Milano Napoli Otranto Palermo
Quaderno Roma Savona Torino Udine Venezia Washington ics
York Zurigo

For more details and more alphabets see the full list, which
is posted at intervals to sci.lang, rec.radio.amateur.misc
and rec.radio.info; it is now also crossposted to various
*.answers groups. On the World Wide Web you can find copies
of the postings and some further material at:

<http://www.cl.cam.ac.uk/users/bck1/menu.html>

The main posting is also available at:

First of all you are talking about people from 01/61 NOT 435. Need
to get that right.

Here's an update on the hams you listed.
K6PXA Arnie Gamson moved to Lake Elsinore,CA 3 years ago after the
Northridge quake thrashed his house.

WB6JAC, Richard Burton lost his JAC call in 1982 and gained KF6GKS
last September and lost that too. Still bootlegging to this day.

WB6AAM,Jay Coote, used to own 61. Sold it off in the late 80's.

N6BIZ, Gary Mankoff, Still around sometimes.

hope this helps,
73 richard.
Webmaster for the OFFICIAL 147.435 Doghouse Web Page at:

Hello to all those 435 closet listeners out there. I would to spread the word on the LA 147.435 web site. After seeing a new thread started on 435 I just had to add my 2 cents. I mean after all you guys stop BITCHING and complaining about Roy Tucker and his one grand worth of vanity calls. I was beginning to worry about you people! heh!

So here goes and happy surfing. Bookmark this site:
http://dmz.net/n6uzs/buzz.htm

I know Robert Casey WA2ISE just "loves" 435 and so does everyone else. Why else would they continue the thread for so long?

The Official 435 Doghouse Web Site contains these sections:
Repeater Jailhouse Report, address to write Kevin Mitnick
Message Board, leave a message for anyone
Photo Album, look at all the radio wierdos
Sound Bytes, listen to all of the radio wierdos
Hot Links, go to other places
Newsgroup Postings, read all the furor Roy Tucker caused with his vanity calls

Plus much much more!
Check it out.

73 Richard N6UZS.
Your friendly 435 Webmaster.

>the TNC to do only pactor II that would have been 1,000,000 in business in the
>last 12 or 14 months. Do you really believe they have sold that many? If so
>I have a bridge ....

I have a very good idea of PacComm's sales figures, and I have by direct communications with one of the principals of SCS their total sales figure as of a little over a month ago. The total is well in excess of 1,000 units, though not all of them went to amateurs. As a cross check, I've received information from active amateur users of PACTOR II on the number of different stations they have heard or worked using the mode, and also serial number ranges for a number of the units in service. If SCS isn't playing games with non-consecutive serial number blocks, I have good confidence in the figures.

I also have a good idea of HAL's sales figures on Clover equipment, which are quite large in toto. The majority of those sales are not to amateurs, but enough are to give me confidence in the numbers I stated. Plus I have my own logs of stations worked and stations heard as a cross check. I've made it a practice to ask the serial number range of the units in use by stations I contact. That gives me a handle on market penetration by new technologies.

A million dollars in sales is not that much. It is typical of many small businesses. My farm has done that much in grain and livestock sales in a 24 month period. If only it were profit instead of gross sales, then it would mean something. It is quite easy to starve to death on a million dollars worth of sales. A used car dealer can easily be doing a million dollars in sales, but that doesn't make him a major player. That'd be a small lot operation. He's mostly making money for the banks and finance companies. I can't say if SCS or HAL are turning a profit, but I can say with some confidence the volume of product they are moving.

We are pleased to announce that our new application note,
'Device Control via the PC' is finally available.

This application note covers such topics as PC control of lamps and motors
using solid state and mechanical relays, device control using both
BJT and power MOSFET transistors, stepper motor control using a transistor
array IC, as well as PWM motor control using the L293 H-Bridge. Connection
to the PC is made via our inexpensive EDE300 PC Interface IC. Code examples
are also provided.

Feel free to download a copy today; it is available at
http://www.netins.net/showcase/elab in the 'Integrated Circuits' section
under 'EDE300'.

It's the same survey which found 40% of HF operators use CW. Figure
it out, did they mean "once upon a time" in both cases?

Well made rebuttal, Gary.

IMHO Hams like any other group of old pluggers, in order to keep their perks ought to be periodically re-tested in things that are currently necessary to understanding radio as it is practiced today. Otherwise how would society be assured that these guys are not being obstructionist and even dangerous.

I wonder how many of these brass pounders could pass a test on UHF technology, cmos design, solid state physics, circuit theory, lightning protection and electrical safety?

You know when all it takes for a general license is to memorize the questions and answers when they give you the complete set of both in advance and then learn a rote but useless skill like tapping 13 wpm, one has to ask is there much difference is there between a ham and a cb radio operator.

The test ought to be upgraded and the incompetents weeded out.

It is my understanding that Techs can do CW on 2 meters. 144.05 - 144.10
IS for CW and weak signals.

Well, there may be some question about his ability to do CW
proficiently, but he is certainly *permitted* to try on any
amateur frequency above 30 MHz, including the only two CW-only
subbands in US amateur radio (50.0-50.1 MHz and 144.0-144.1 MHz).
Ironic, eh?

A no-code tech can operate CW in all the amateur bands from 6m on up.
Ironically too, there are only two totally CW exclusive band segments.
Those CW only segments are 50.0-50.1MHz and 144.0-144.1MHz.
ALL techs (coded and non-code) are allowed to operate in those
segments too.

>power be less even though the Bird says otherwise?

No difference, 100 watts is 100 watts. You can generate it more efficiently (and less linearly) in a Class C amplifier than a Class A, but the guy listening to the signal on the other end will see no difference on his "S" meter, nor will he (barring distortion) hear any difference.

In Class C, you have a shorter conduction cycle, but you have higher peak power during the period when it is conducting.

Imagine you're pouring water in a bucket. In Class A, you open the faucet a little and leave it open. In 2 minutes, the bucket is full. In Class C, you open the faucet all the way for 5 seconds, then close it for 25 seconds. The water is still up to the top of the bucket.

Broadcast Roster

IMPORTANT ANNOUNCEMENT

DUE TO UNFORSEEN CIRCUMSTANCES THE JANUARY TRASH &
TREASURE SALE WILL NOT BE HELD TODAY.
THE NEW DATE IS SUNDAY 2ND FEBRUARY, AT THE USUAL TIME
AND PLACE.

THE W.I.A.REGRETS AND APOLOGISES FOR ANY INCONVENIENCE
THIS MAY HAVE CAUSED.

AX FOR AUSTRALIA DAY!

In celebration of Australia Day, the special event prefix AX may be used in
place of the normal VK prefix by all Australian amateurs for the 48 hours
(local time in each State) of the 26th and 27th of January this year.

Use of the AX prefix is optional. The decision is up to each amateur.

The granting of permission for use of the AX prefix followed a successful
submission from the WIA to the Spectrum Management Agency (SMA) late
last year. The SMA advised the WIA of their decision today, 10 January.
The WIA hopes to make this an annual event. Further details will be
advised when they come to hand.

--Roger Harrison VK2ZRH, Federal Media Liaison Officer

WIA Federal President Neil Penfold VK6NE adds:

"If you do decide to use the AX prefix, please be aware that many people will contact you in the hope of receiving a QSL card with the special callsign, so please QSL if you want to use the AX prefix."

DIVISIONAL ELECTIONS

The Elections for the 1997-1998 Council of the Wireless Institute of Australia New South Wales Division will be held in association with the Annual General Meeting on the 19th April 1997.

Nominations for the council are now open and they will close at 12 noon on Saturday 8th March 1997. The Divisional Office will be open that day as well as it's normal opening hours, which will be given elsewhere in the broadcast.

Nomination forms are NOW available from the Divisional Office.

A special note for members.

Only ordinary members and honorary life members are eligible to vote in the forth coming ballot. Associate members are not eligible to vote in the ballot. An ordinary member is one who holds a "Certificate of Proficiency" of any level. An associate member, is one who does not hold such a "Certificate of Proficiency" - commonly called a shortwave listener.

So any members who have doubts about their membership status are invited to contact the Divisional Office to confirm their membership status.

The Office's telephone number is (02) 9689-2417
The office's fax number is (02) 9633-1525
The Office's free call number is 1800 817-644
The Divisional Office's address is
109 Wigram Street Parramatta
P.O. Box 1066 Parramatta N.S.W. 2124

--Peter O'Connell VK2EMU, Divisional Returning Officer

The next examinations will be held at Amateur Radio House Parramatta on Sunday 16th February 1997. Candidates who have lodged applications are requested to report at 12 noon, and the exams will start as soon after that time as possible, but no later than 12.30 pm.

Please apply to the office for the necessary forms. Applications close on Thursday 6th February. Acceptance cannot be guaranteed for any applications received after that date.

-- Eric Fossey VK2EFY Divisional Secretary.

NO CLASS LICENCE FOR AMATEURS

Persistent rumours over recent months that amateurs were to be shortly transferred from the present Apparatus Licence system and put under a Class Licence by the Spectrum Management Agency have no foundation, according to advice received from the SMA.

A number of amateurs reported being told by staff in their local SMA Area Office that they should not bother paying for a multi-year licence because amateurs would soon be Class licensed.

To ascertain the facts, WIA Federal President Neil Penfold VK6NE, contacted the SMA in Canberra.

The facts are: As part of its program of improving spectrum management processes, the SMA is reviewing all non-assigned services, of which there are ten - including the Amateur Service - to see whether sound spectrum management necessitates the issue of individual licences. Non-assigned services do not have an individual frequency assignment allocated by the SMA, but instead share a pre-set spectrum allocation. Apart from the Amateur Service, non-assigned services include some aeronautical services, outside broadcasting networks, maritime and scientific services. Each non-assigned licence type is being individually reviewed.
There is no predisposition to make any particular change to the Amateur Service, the SMA said. The review will incorporate appropriate consultation with the WIA and the Amateur community and will include consideration of the proposals that the WIA will shortly be putting before the Government, they said.

The WIA's position is that, while Class Licensing notionally offers a "fee-free"; licence, radio amateurs individually and the Amateur Radio Service in Australia, stand to lose a great many advantages which are currently enjoyed. Class Licences are not issued to individuals. One of the fundamental strengths and advantages of the Amateur Radio Service is that each amateur operator must be qualified, and is individually licensed by his country's administration. Each amateur and each amateur station is known to the administration. That is the way it is around the world. Individual licences is one of the cornerstones of how the Amateur Radio Service gained and maintains its recognition by the ITU and representation at international radiocommunications planning conferences.

Without individual licences, the Australian Amateur Radio Service would likely not be recognised by the International Amateur Radio Union and we may lose representation at the international level.

The issue and use of amateur call signs would be thrown into question. From their inception, Class Licences have only been issued covering the use of type-approved equipment meeting prescribed standards. Class Licensing of amateur radio would mean every piece of equipment would have to meet those standards - from microphones to packet radio TNCs. That means antennas, too. Australian amateurs would lose the ability to construct any item of their own equipment.

Without individual licences accredited by an agency of the Australian Government, the ability to operate your own amateur station in other countries, under reciprocal licensing agreements or through direct application to the administration, would be lost. Your status as an amateur radio operator would not be recognised.

Under Class Licensing the ability to recognise and act against amateur-band pirates would be seriously compromised.

There is very real likelihood that the Amateur Service in Australia would suffer from being identified with Class Licensed operations of low specification such as that on the industrial, scientific and medical equipment (ISM) bands, or the "anything goes" CB service.

"Without a fundamental and far-reaching rewrite of the definition and operation of Class Licensing as presently defined in the Radiocommunications Act, the Amateur Radio Service in Australia would be disadvantaged and altogether badly served by coming under a Class Licence,"; said WIA Federal President, Neil Penfold VK6NE.

As previously announced in WIA News, the WIA is to present its completed submission on Amateur Radio Service licensing to the Minister for Communications and the Arts, Senator Richard Alston, on 12 February.

--Roger Harrison VK2ZRH

WICEN NEWS

A draft version of the long-awaited Training Manual has been produced, so hopefully it will not be long before it will be available to all members. There are some new additions to the WICEN calendar, all involving the Central Coast region. They are having a meeting, at Wyong, on the 14th of March, and over the weekend of 19-20th April is the Watagan Mountains Car Rally, for which Andy VK2XRX is the contact; around 20 people are required for this exercise.

Later on this year is the VRA Mid Year Conference, at Wombeyan Caves, on the weekend of 22nd-23rd March; the Bridge to Bridge Speedboat Classic on 4th May; the Hawkesbury Emergency Expo, run by Alan VK2YYJ, is over 16th-18th May; the Hawkesbury Classic Paddle is organised as usual by Kevin VK2CKD over 18th-19th October and the annual Bungonia Cave Rescue will tentatively be on the weekend following, over 25th-26th October.

Those regions wishing to have their activities publicised on this broadcast are requested to have the details with the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to VK2KFU@VK2KFU (AX.25) or vk2kfu@gw.vk2kfu.ampr.org (TCP/IP).

Fax is acceptable, to (02) 9922-5286, for the attention of Dave Horsfall, but they are likely to be summarised; e-mail is also acceptable, to dave@fgh.oz.au.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

HEARD ISLAND DXPEDITION NEWS HIGHLIGHTS

The following snippets are from the Heard Island Dxpedition Web page; addresses are provided at the end of this segment.

15 January
As of 12:15 z on Wednesday, Jan 15, four stations were on the air full-time, and the team hoped to bring that number up to five or six.
The Oscar 10 satellite links were fully active.

The Dxpedition was active simultaneously on CW and SSB on the same band . This is possible because the CW and SSB tents are separated by not less than 700 metres!

The Pacsat link was declared irrepairable. Expect logs by e-mail (inmarsat) but no promise received. There are some problems to be resolved.
The beverages (antennas, presumably!) were up.

All beacon reports were being processed. Two very large propagation reports are hung in the main tent, one with predictions to all continents/areas, one with observed openings (Beacon + feedback from pilots + own logs) and with with band/mode data.

There was no 80 m operation on the 14th because of interference from the 40 m station, but they were working on it.

The BEACON was temporarily off the air to save fuel.
THE 30 M TRANSMIT FREQUENCY WAS CHANGED TO 10,103.5 MHz
Weather: air temperature: + 6 deg C, chill factor - 4 deg C wind 20 knots, and regular rain showers

The team is doing very fine. All material doing well (tents, antennas, generators etc). Only set-back so far being the broken PACSAT system.

NEWS FROM JAPAN
1) 160m: VK0IR 160m was heard in JA around 21z, not 22z as predicted. Peaking 559 at 2110-2120, but calling up only for EU. The pilots are informing Heard island to look for JA at 21:00-21:30 z.

2) Satellite: Good job by Arie and the satellite ops enjoyed their opening to VK0IR on AO-10.

17Jan
80 METER SSB
VK0IR has been on 3799 all evening with a great signal. They finally got the ON4UN special up today. It is a 15 meter (50 ft) long vertical, made of an aluminium base section (8 m) and a fibre glass top section (7m), aith two short top loading wires. The antenna uses two elevated radials (in line), and 50 radials on the ground to improve reflection efficiency. Operators were Harry, RA3AUU and Ghis, ON5NT.

QSL SERVERS
The QSO logs have been successfuly transfered by PACSAT. The files will be uploaded on the different servers and should be available some time later today.

BIG SIGNALS ON 160 (JAN 17)
Weather: + 7 deg C, 10 kph wind
The ON4UN 80m m vertical is up. Harry made a rate of 3 QSO's / minute on 80 SSB!

Tomorrow (18th) a 2 element phased array for 30 m will be erected at camp 3 (from then on also 30 m CW at night)

RTTY: today many US stations were worked, even US West Coast.
The three communication tents have a VHF, which is used to exchange all info. With 700m between the com sites, this is a necessity
One beverage has been run down by a seal (or was it Mart on inspection??)

Dave, VK2JDM has proven to be a superb "site engineer", making sure that all is kept up well. So far there has been no "major" storm yet, but OP site 2, on the hill, has been exposed to 60 kph (40 mph) winds. Correct anchoring is very important.

Peter reports that cooking for 20 people under the circumstances is a real challenge, but everyone gets one warm meal a day. They have plenty of snacks with them (will they put on weight??). Peter says they have 3 tons (6000 Lbs) of food, including 500 litres. of orange juce.

They have had no problem with wild life so far (maybe they're the wildest life on the island???)

They raised the 40 m SSB yagi much higher, so signals should be better now.

Peter reported that last night (Jan 16) they apparently had ONE-WAY propgation on 3507. Many reported hearing and calling them for a long time, with no avail. But we know tonight (17th) it was not a problem on 80m SSB.

THE EUROPEAN PILE UP
All operators complain about their difficulties to manage the European pile ups. They are definitely the worst: there is no discipline at all. But of course, that is no news for us....

ANALYSIS OF QSO BREAK DOWN
The fact that VK0IR worked only twice as many Europeans as East Coast stations, and considering the MUCH more difficult path, proves that they really try to put all the emphasis on working the difficult to reach regions! Good work!

HIGH BAND OPENINGS
Now that the pile ups on the standard band begin to be less dense, they will start concentrating more on working the "erratic" high bands (15, 12 and 10). Keep your eyes open on those bands!

PRIORITY FOR WEST COAST
They mean it very seriously with the West Coast: at one time, tonight, they were working West Coast (only) on 20 SSB, 40 SSB, 40 CW and 20 RTTY, all at the same time. West Coasters, you are being spoiled!

Those news items were from the Heard Island Dxpedition Web page, which is updated daily. If you would like to get the news as it happens, you can access the web page via the VK2 Divisional home page, or direct via one of

the following:

DX NEWS

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, John, K9UWA, John, N0JT, Steve, K4WA, the DX News Letter, the DX News Sheet, and Contest Corral from QST. Thanks to all.

HEARD ISLAND, VK0. VK0IR is QRV on all bands and modes with five stations. Check your local PacketCluster for up to date spots on this DXpedition. The NCDXF beacon is also QRV on 14.100, 18.110, 21.150, 24.930, and 28.200 MHz, with reception reports coming in from many parts of the world.

ALGERIA, 7X. Enrique, EA5AD, will be active as 7X0AD, on all bands, using SSB. His QTH is near the capital of Alger. QSL via EA4URE.

BARBADOS, 8P. Glenn, VA3DX, will be QRV for two weeks from Barbados. He will also operate as 8P9DX in the CQWW 160 CW Contest. QSL to VE3ICR, Glenn Wyant, 74 Highland Ave, St. Catharines, Ontario, L2R 4J1, Canada.

PUERTO RICO, KP4. K4UJ, and K4WA, will operate from here January 22 through January 27. Operations include the CQWW 160 CW contest. The contest callsign will be KP4/K4UJ. Outside the contest, they will operate as KP4/homecalls. QSL via homecalls.

JAN MAYEN, JX. Per, LA7DFA, is active as JX7DFA until April. He plans to concentrate on 80 meters during January. He will be moving his location to the western side of the island in February, where he will concentrate on 160 and 80 meters. QSL via the bureau.

ARUBA, P4. Mike, K4PI will be active as P49I from January 22 through 28. He will also be active in the CQWW 160M Contest, and will be QRV before and after the contest on CW on the lower and newer bands. QSL via K4PI. Also look for John, K9UWA, and Jean, N9PXF, to be active as P40WA for the CQWW 160M CW Contest. QSL both calls via K9UWA.

ST. MARTIN GROUP, PJ. Mike, K3UOC, will be active as PJ5AA from St. Eustatius January 24 through 28. Activity will be on all bands plus participation in the CQWW 160M Contest. QSL via W1AF.

TURKS AND CAICOS ISLANDS, VP5. Joe, K8JP, will be active as VP5/K8JP, February 12 through 24. Activity will also include entries in the ARRL DX CW Contest and the CQWW 160M SSB Contest as VP5JP. QSL to K8JP, PO Box 59573, Schaumburg, IL 60159 0573.

REVILLA GIGEDO, XF. Hector, XE1BEF, is active as XF4CA and will be here until January 20. His activity will be on all bands on CW, SSB and RTTY. QSL to home call.

PARAGUAY, ZP. A group using the callsign ZP0V will be operating from Yacyreta Island, located in the Parana River, from January 19 through 26. SSB and CW operations on 80, 40, 20, 15, and 10 meters are expected. No QSL information as yet is available.

QSL ROUTE CORRECTION. Gunter, HP1XVH, allowed the use of his call, 3E1DX, during the CQWW CW Contest. Contacts made with 3E1DX on November 17 and 18, 1996, CW or SSB, are via KU9C. All other contacts are via N0JT.

--ARRL DX Bulletin number 3, dated 16th January

ANOTHER YEAR'S REPRIEVE FOR CHANNEL 35 ATV

Amateur television repeater systems on 575-582 MHz around Australia have been granted another year's extension to operate by the Australian Broadcasting Authority (ABA).

The "drop-through", as the ABA refer to it, has been granted for ATV systems at Black Hill in the ACT, Lane Cove, Oakdale and Springwood in NSW, Redbank Plains and Spring Hill in Queensland, Illawarra Hill and O'Halloran Hill in South Australia, Lyndhurst and Olinda in Victoria, and Carine in West Australia.

The Spectrum Management Agency (SMA) advised the WIA late last year that the ABA had advised the current drop-through period had been extended to 31 December 1997. The WIA asked the SMA about possible extension of the drop-through period at the WIA-SMA Liaison meeting last June.

The 50 centimetre band was formally withdrawn from Amateur use in 1989. (It was previously a "temporary" allocation until required for broadcasting). ATV use of Channel 35 has proved a useful "bridge" between the amateur radio community and the public over recent years.

TABLELANDS & WESTERN PLAINS ABC REDUCE POWER
ON FM RADIO BROADCASTING SERVICES

The Tablelands ABC radio services, that is Regional Radio, National Radio, etc,.Which are transmitted in the FM broadcast band, have had to reduce their power by two thirds, from the site near Orange due to a mixing problem with Aviation Services.

The Western Plains Services being transmitted from the Warrumbungles near Coonabarabran have also had to reduce power by ten percent, due to a problem of Coaxial Cable Melting.

The problem at Orange seems very similar to the mixing problem, that occurred whilst I was on the VK5 council back in the eighties with VK8RCA at Heavy Tree Gap Alice Springs when the Radio Telephone link to Santa Theresa Mission from Heavy Tree Gap was commissioned . When VK8RCA was used everything was also heard on one of the well used channels at the Alice Springs Airport.

The official immediate solution for the red centre, was the switching off of the repeater until an alternate frequency could be found. The finding of the alternate frequency was done with tremendous amount of the old trial and error technology.

--NSW Affiliated Clubs Officer, Ken Westerman VKEGW Dunedoo.

CLUB NEWS

Due to lack of support, the Monthly Affilated Clubs net, future nets will now not take place.

Thanks to all affiliated clubs who answered our request for information on the proposed increase in repeater transmitter fees. A small number of clubs have not yet replied.

Replies received indicate that all clubs against one are opposed to the proposed increase in licence fees. If you have not sent your reply please do so now.

The bi monthly meeting of the Orana Region Amateur Radio Club will take place in the Scout Hall Talbragar Street Dubbo on Thursday 30th January at 8 pm.

--NSW Affiliated Clubs Officer, Ken Westerman VK2AGW

HORNSBY & DISTRICT AMATEUR RADIO CLUB

The club invites all persons interested in radio and electronics to attend the open night on Tuesday 28/1/1997 at the

Mt Colah Community Centre
Pierre Close
Mt Colah

(Near the eastern entrance to the railway station)

If you are present on the 28th, why not have a yarn to our education officer Tony VK2BTL. If you feel you are interested in becoming an Amateur Radio Operator, feel free to ring Tony VK2BTL on 9487-3383. The classes will commence definitely late in February (approx 25th).

Remember the Club net at 8:00pm Monday nights. All are welcome on VK2RNS, the frequency 147.250 with a positive offset.

If you could like more information regarding the Club or its activities, write to:
HADARC
PO Box 362
Hornsby 2077

Or, you may phone the Publicity Officer, John VK2WRT, on 9807-2490

-- John VK2WRT, Publicity Officer

AUSTRALIAN AMATEUR TELEVISION CLUB

The next meeting of the AATC Inc will be held as usual on the 2nd Sunday
of the month in February at 109 Wigram St Parramatta at 1:00 pm.
Special notice to all members the new 23cm ATV/satellite receiver will be
available in limited numbers, this has full twin channel demod. The next
batch will not be available until Wyong, so be early!!!

1365. VK2WI News, 19th January, 1997 (2/2)

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-18 00:00:00 UTC
From: richardm@zeta.org.au
Message-ID: <5bpkmb$fpo@phaedrus.kralizec.net.au>
Source record: 206952
Cross-posted to: aus.radio.amateur.misc,rec.radio.amateur.misc

- The technical discussion will be about the next receiver

- Also a chit chat about the new standard to be adopted in the club regarding ATV on the Internet, re USA, UK, Europe etc. Comments are welcome to get a standard organised. (Where are you Cade?)

- Wyong to be discussed, format, timings, mannings etc.
This meeting is as usual open to any person (or amateur) interested in Amateur or satellite TV.

Note: Wyong is on Feb 23, 1997, 5 weeks away - but who's counting
For more information about ATV, contact Bob the Publicity Officer on (02) 9587-3491 during normal civilised times.

-- AATC Inc Publicity Officer, Bob Barnes.

VHF DX GROUP

THE VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR GENEROUS ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE.

THE FIRST MEETING OF THE VHF GROUP FOR 1997 WILL BE ON TUESDAY JANUARY 21 AT AMATEUR RADO HOUSE, PARRAMATTA, STARTING AT 7:30PM

AT THIS MEETING WE WILL BE DECIDING ON OUR ACTIVITY PROGRAM FOR 1997, S0 IF YOU HAVE A TOPIC WHICH YOU THINK SHOULD BE COVERED, THEN COME ALONG AND HAVE YOUR SAY. WE WILL ALSO BE PLANNING OUR CONTRIBUTION TO THE WYONG FIELD DAY IN FEBRUARY.

THE ROSS HULL CONTEST RUNS UNTIL NEXT WEEKEND. THIS YEAR, DAILY CONTEST CONTACTS ARE BEING MADE FROM THE SYDNEY AREA TO VK3 AND VK4 ON 144, 432 AND 1296 MHZ. WE HAVE ALSO HAD SEVERAL SPORADIC E OPENINGS ON 144MHZ TO ZL, VK4, VK5 AND VK7.

DURING THE NATIONAL VHF FIELD DAY LAST WEEKEND - WHICH ATTRACTED MINIMAL PARTICIPATION FROM VK2 - FIVE STATES WERE AVAILABLE FROM THE SYDNEY AREA ON 144MHZ.
DON'T FORGET THE TUESDAY ACTIVITY NIGHTS ON 144MHZ AND THE GROUP'S SUNDAY MORNING NET ON 146.550MHZ FM AT 1100 AM.

--SUBMITTED ON BEHALF OF RICHARD SOULIE, VK2AR

The Fishers Ghost Amateur Radio Clubs Classes will re commence on Wednesday the 5th of February...These classes are for those wishing to study for.. and gain a radio Operators Certificate..or for those wishing to upgrade..

This month..on the 21st January, we also have the first monthly meeting of the Club, with Jack VK2DVH again presenting a piece on homebrew equipment..

Jack always gives a great lecture and demonstration..

Also on the Evening... Jim VK2LJZ will give a very basic talk on TSThost the packet program...

The idea is get some audience input so we can discuss some of the finer points of the program and exchange ideas.....Bring a disk or two along.. The classes and meetings commence at 7:30 pm and the rooms are located at the southern end of the school grounds in the yellow painted buildings...Chamberlain St Campbelltown..

Members are also reminded that February 18... is the Clubs AGM.... The AGM will commence at 7:30 pm.. and for those wishing to pay dues on that evening, are reminded that it will ONLY be collected after the closing of the AGM ...

Members and non members welcome to all functions including the AGM.. Please come along and see what the club has to offer..

--Jim VK2LJZ, Club Secretary..

The Cook Island Amateur Radio Club ZK1AX, invites visiting Amateurs to their club meetings, held on the first Thursday of every month. The club is a great place for visitors to meet local Amateurs and Radio enthusiasts. A warm welcome is guranteed. No joining fee. Enjoy a swim amonst the lush tropical garden setting in full size pool. The club can arrange meetings and skeds with Outer Island Amateurs and discounted travel to the Outer Islands. Full Amateur Shack at Club House with excellent Antennas available. Club can organise local ZK license whilst visiting.

Original Amateur Operators Certificate of Proficiency must be produced - copy is not acceptable - to obtain a ZK license to operate in the Cook Islands. The annual license fee is NZ$20.

For further information, contact John Abbott ZK1AX,
by telephone on 0011 682 21190, or
by fax on 0015 682 20964

For a general brochure and details on visiting the Cook Islands, contact the Cook Island Tourist Authority,
by telephone, Sydney (02) 9955-0466, or
by fax (02) 9955-0447

If you would like to submit a news item for inclusion in the weekly broadcast, please send it to us by one of the following means:
by post to the Divisional Office, PO Box 1066, Parramatta NSW 2124;
by fax to (02) 9633-1525;
by packet radio to BCAST@VK2WI.NSW.AUS.OC, or
by Internet e-mail to wiansw@sydney.dialix.oz.au

Please note that the deadline for news items is 2pm on the Friday preceding the broadcast; if submitting news items by packet or internet, please allow for forwarding delays in the network.

If submitting printed copy, please:
submit your news item on A4-size paper;
double space your text;
write on one side of the paper only, and
use a plain font such as "Arial" or "Helvetica", 12-point or larger. This is especially important if sending your news item by fax.

Please avoid using abbreviations and shorthand, check your spelling, grammar, and punctuation, and use the exact words you wish the announcer to say on-air. Remember, the more care you take in preparing your news item, the better the announcer will read it.

From: gary@ke4zv.atl.ga.us
Message-ID: <1997Jan18.050226.16922@ke4zv.atl.ga.us>
Source record: 206954

In article <19970109152600.KAA09873@ladder01.news.aol.com> mnmaniac@aol.com (MN Maniac) writes:
>>Even though I obtained my license a scant five years ago I've seen the
>>quality of the 2m band and even the 70cm band slide downhill.

Interesting. I've observed almost no change in the qualities of these two bands over the last 5 years. They aren't as affected by the sunspot cycle as HF is, so their properties remain nearly constant with time.

>This is not a unique characteristic of ham radio, but rather, a reflection
>on life in general. By nearly every measure, our society has declined
>dramatically from what it was 5 years ago. Used to get 'the bird' if you
>cut someone off in traffic. Now you get shot instead. It's a crappy
>world we live in.

That appears to be a common perception, but is it reality? If you look at the FBI uniform crime reports, the incidence of violent crime has declined precipitously over the last 10 years (not because of government actions, of course, but due to the aging demographics of the population). Of course popular media hype doesn't reflect that reality, it doesn't sell soap. Of the 385 murders in Atlanta last year, only about 35 would have warranted a mention in the papers of 30 years ago. Crime wasn't lower then, several people were knifed or shot on any given Saturday night in certain neighborhoods, but the people to which it happened weren't a fit topic for polite society.

Accidental deaths are down too (and down sharply since the demise of the 55 MPH speed limit, an inconvienent fact the safety Nazis would like to sweep under the rug). Now if we could only get government permission to defuse the live bombs they require us to drive around with, we'd be even safer. The average lifespan is up. Several deadly diseases are now practically extinct (though a new one, easily avoided, gets lots of press). The threat of full scale nuclear war is only a memory. Etc. By almost any measure, except the extent of government's unprincipled intrusion into our private affairs, things are better today than ever before.

There are problems, of course. Government agents using tanks against a civilian church over alleged unpaid Federal taxes for one, a government sniper murdering a mother holding her baby in her arms at the front door of her home, for another. Home invasions are up, but primarily conducted by people wearing ninja outfits and claiming to be from the government. If we could discount government violence and threats of violence against the population, we'd have to say we live in much safer times than 10 or 20 years ago.

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

$$$$ This is what many people call A $$ scam but, IT WORKS you can't lose!!!!!!$$$$

Take five minutes to read this and it WILL change your life.

The Internet has grown tremendously. It doubles in size every 4 months. think about it. You see those 'Make.Money.Fast' posts more and more. That's ... because it WORKS ! So I thought, all those new users might make it work. And I decided to try it out, a few months ago. Besides, whats $5.00!
So I sent in my money and posted.Everyone was calling it a scam, but there are SO many new users!

Well, two weeks later, I began recieving bucks in the mail! I couldn't believe it! Not just a little, I mean big bucks! At first only a few hundred dollars, then a week later, a couple of thousand, the By the end of the fourth week, I had recieved nearly $47,000.00. It came from all over the world. And every bit of it perfectly legal and on the up and up. I've been able to pay off all my bills and still had enough left over for a nice vacation for me and my family.

Not only does it work for me, it works for other folks as well. Markus Valppu says he made $57,883 in four weeks. Dave Manning claims he made $53,664 in the same amount of time. Dan Shepstone says it was only $17,000 for him. Do I know these folks? No, but when I read how they say they did it, it made sense to me. Enough sense that I'm taking this serious.

STEP 1.

Invest your $5 by writing your name and address on five seperate pieces of paper along with the words: "PLEASE ADD ME TO YOUR MAILING LIST." (In this way, you're not just sending a dollar to someone; you're paying for a legitimate service.) Fold a $1 bill inside each paper, and mail them to the folowing adresses:

1-M Palmer Gilfach Goch,Blaenpenal,Aberystwyth
SY23 4TN ,United Kingdom

2-T.Toole box1138,Valemount B.C
Canada VOE-2ZO

3-Vitor Schlrder de Borba
Av Lucas de olivieira 2280 ap 404
90460-000 Porto Alegre/RS Brasil

4-Evert jan Benz
nijensteinheerd 58
9736 TD Groningen
Netherlands

5-J.J. Alles
RR 2 Site 81 Comp 6
Smithers, B.C.
V0J 2N0
Canada

STEP 2.

Now remove the top name from the list, and move the
other names up.This way, #5 becomes #4 and so on.
Put your name in as the fifth one on the list.

STEP 3.

Post the article to at least 250 newsgroups. There are at
least 19000 newsgroups at any given moment in time.
Try posting to as many newsgroups as you can. Remember
the more groups you post to, the more people will see your
article and send you cash!

STEP 4.

You are now in business for yourself, and should start seeing
returns within 7 to 14 days! Remember, the Internet is new
and huge. There is no way you can lose.

Now here is how and why this system works:

Out of every block of 250 posts I made, I got back 5 responses.
Yes, thats right,only 5. You make $5.00 in cash, not checks or
money orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now also makes 250
additional postings with your name at #4, 1000 postings. On
average then, 50 people will send you $1.00 with your name at
#4,....$50.00 in your pocket!

Now these 50 new people will make 250 postings each with your
name at #3 or 10,000 postings. Average return, 500 people= $500.
They make 250 postings each with your name at #2= 100,000
postings=5000 returns at $1.00 each=$5,000.00 in cash!

Finally, 5,000 people make 250 postings each with your name at
#1 and you get a return of $60,000 before your name drops off
the list.And that's only if everyone down the line makes only 250
postings each! Your total income for this one cycle is $55,000.

From time to time when you see your name is no longer on the list,
you take the latest posting you can find and start all over again.

The end result depends on you. You must follow through
and repost this article everywhere you can think of.
The more postings you make, the more cash ends up in
your mailbox. It's too easy and too cheap to pass up!!!

So thats it. Pretty simple sounding stuff, huh? But believe me, it
works. There are millions of people surfing the net every day, all
day, all over the world. And 100,000 new people get on the net
every day. You know that, you've seen the stories in the paper.
So, my friend, read and follow the simple instructions and play
fair. Thats the key, and thats all there is to it. Print this out
right now so you can refer back to this article easily. Try to keep
an eye on all the postings you made to make sure everyone is
playing fairly. You know where your name should be.

If you're really not sure or still think this can't be
for real, then don't do it. But please print this article and pass
it along to someone you know who really needs the bucks, and see
what happens.
I've been perusing usenet for a few months now and I've seen these ads
appear very often. Like you, I thought that these postings were a
complete annoyance and a waste of time. But after reading dozens of them, I
decide 'For the sake of only 5 dollars I'll give it a try'. But the
reality is that it DOES work and you are guaranteed to receive large
sums of money, legally.
Make sure that you put your correct mailing address,
especially if you're from another country as some people have never sent
mail out of the country and might not know how. You may alter this
article
if necessary, editing what you need to edit.

REMEMBER....HONESTY IS THE BEST POLICY.YOU DON'T
NEED TO CHEAT THE BASIC IDEA TO MAKE THE BUCKS!
GOOD LUCK TO ALL, AND PLEASE PLAY FAIR AND YOU WILL
WIN AND MAKE SOME REAL INSTANT FREE CASH!

*** By the way, if you try to deceive people by posting the messages
with your name in the list and not sending the bucks to the people
already included, you will not get much. I know someone who did this
and only got about $150 (and that's after two months). Then he sent
the 5 bills, people added him to their lists, and in 4-5 weeks he had
over $10,000!

TRY IT AND YOU'LL BE HAPPY!!! :o) !!!!!!!!!!

INSTRUCTIONS ON HOW TO POST USING NETSCAPE 3.0

1. Click on any newsgroup like you usually would, then click on
"TO:NEWS" in upper right hand corner. This will bring up a message box
to type this article in.

2. Leave the message box like it is, don't maximize it. In Subject
box type something flashy like "$$$CASH READ HERE$$$".

3. Tab once and you are ready to type in the body of the box. Retype this article but with your name inserted in slot #5 and the others moved up as I directed. Remember the #1 in this article will be removed in yours.

S. Pypke tells people to retype the article. This may not be necessary. Try this: highlight the article with a mouse (or click edit and click select all). Then, click edit, click copy. Then, go to notepad, or Word, or WordPad, or Wordperfect. Click paste. Save it from there. To post, highlight from notepad. Click copy. Go to the mail section to post, click paste. Go on from there. This will make it easier.

4. When you are done retyping this whole article with the proper changes, click on FILE in this message box (it is right above SEND). Click on SAVE AS under FILE (make sure your in the newsgroup message window, not where it says Netscape News) Save your file as a text file to your C: or A: drive. DO NOT SEND OR POST YOUR ARTICLE UNTIL YOU DO THIS!!! Once saved move to next step.

5. To post to at least 200 newsgroups do the following. You can post to more which will bring you more money but 200 is the bare minimum. Go to a newsgroup you want to post in. Click on "TO NEWS". Write your subject just like you did when you retypd this article. Hit tab once. Now click ATTACHMENT.
Another box comes up. Find your file where you saved it. Highlight the file and click "OPEN". Now click OK. If you did this right you should see the file name in the Attachments box in shaded letters.

6. NOW JUST CLICK SEND. Do this to at least 200 newsgroups (there are over 18,000) Each time it takes no more than 30 seconds so once you have retyped the article its easy.

INSRTRUCTIONS FOR EXPLORER

1. Holding down the left mouse button, highlight this article. Then press "CRTL" key and "C" at same time to copy this article.

2. Print this article for reference.

3. Go to Newsgroups and press "POST AN ARTICLE", a window will open. Type your headline in the subject area and click in the large window below.

4. Press "CRTL" and "V" and the article will be placed in the window. If you want to edit the article, do so and then highlight and copy it again. Now every time you want to post the article in a new newsgroup just do the "CRTL" and "V" command and press Post"

1369. Re: More effective? Hamstick Dipole vs. Folded Dipole

<which setup might be more effective: a dipole made
<up of two Hamstick antennas, or a full-size dipole

I think almost any full size dipole would get out better than a shortened loaded antenna like a hamstick dipole. However why don't you just put up a standard inverted vee dipole. It only requires one pole to the two poles your loop would require. Further, in the vee configuration the high current portion or the antenna would be up in the air where it will do the most good.

And just where in the rules does it say this???? Just because someone hasn't passed a test doesn't preclude him from USING code. Does the Tech license not have privs on 6m at 50.0-50.1 MHz? If I remember correctly, this is a CW exclusive subband. Same as 144.0-144.1 Plus, he CAN use code anywhere on any frequency his license will let him. CW is allowed everywhere. Not trying to flame, just setting the record straight.

Telescoping Mast for sale
in San Jose, CA.

37 foot Telescoping Mast, material is schedule 80 PVC Tubing,
in 4 sections, with O.D's: 3.50", 2.75", 2.25", and 1.75". The
sections are held in place by a u-clamp and thru center eye-bolt
arrangement. Each u-clamp has 2 outer eye-bolts, along with the thru
center eye-bolt, which are used as guy points.

The bottom 3 sections use PVC sched 80 reduction union joints (very
beefy) which I reamed out to allow upper sections to slide thru
freely. The three over-lapping sections are over lapped by 12, 16,
and 18 inches, from smallest to largest dia., respectively. Each
upper section has 2 sets of 3 spacer bearings that take up the
excess play inside each over-lapping section.

As you may well have gathered, I have an Engineering background
and took some time designing this Telescoping Mast. It wasn't
something I just threw together.

The last 2 years in San Jose, CA, has brought storms with winds as
high as 75 mph. This Mast barely moved during these storms. Also, I
use three sets of guys which are marine-type nylon rope that is UV
resistant.

Mast is more durable and can withstand higher wind speeds than
a steel mast, when guyed properly. Also, Mast doesn't interact
with antenna like a steel mast would.

Strange Attraction?

That repeater has more CONVICTED FELONS on it than all other repeaters
and CB combined. I see nothing strange in a gathering of like minded
people in any other arena. The "Animal Farm" is no exception to that
either. The F.C.C. has seen it fit not to do anything about C.B. for a
long time now, and it appears to be that Ham Radio is heading into the
same direction as well. The only difference is that the radios playing
that trash cost more!

I don't know about other countries, but the UK is even more restrictive
than the US. "Novice" is 6 wpm, and allows 5 watts PEP.

Yes, many countries have a single license - it usually has a strong theory
test (with no question pool) and code requirements anywhere from 10 wpm
through about 20 wpm.

Recently I did the decent thing - sent the programmer his requested
registration fee of $20.00 for a shareware program I really liked. In
turn for registering the software, I was to get a 'code' emailed to me to
turn of the 'nag' greeting when the software ran. Several months have
gone by with no email. I sent the money because it was a good program
more than to get the nag turned off. However, developers do have to
offer some support as part of doing business. This is the Second Time
a shareware developer has failed to acknowledge a registration this way.
I'm beginning to think the registration (aside from the money) does not
mean anything. I am sorry developers get ripped off by people who
use their apps without paying for them - but trust works both ways.

Hi!

I am going to purchase a GMRS handheld, but can't decide which one and =

would like some opinions. I currently own 2 Uniden GMR100's and would =

like to get something with more features a larger range but can still be =

used with them. Am considering the following:

-Maxon GMRS 210+3
-Radio Shack PRS-101
-Radio Shack PRS-102

Right now, most likely is the Maxon, but would like to hear opinions and =

thoughts about which is the best for features/value vs. price.

Thanks in advance!

Andrew

On what basis or justification were the beams
ordered removed? Spoiling the view isn't usually
justifiable within zoning regulations. Some type
of township or court action must have been involved.

Andrew,
I would strongly recommend the MAXON 210+3. I'm dissapointed in the PRS-101s I have as they are simplex only and suffer from IMD terribly. Just after I purchased two PRS-101s because there were no GMRS repeaters in my area, a local ham club is considering putting up a Vertex GMRS repeater. Now, I plan on purchasing a Maxon SM-2000 mobile unit and two 210+3 HTs. Anyone want a couple of barely used PRS-101s for a good price?

1381. What To Do About Bootleg Out-of-Band QRM/Splatter?

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-19 00:00:00 UTC
From: Douglas Gavilanes <gavilan1@earthlink.net>
Message-ID: <32E292FD.6315@earthlink.net>
Source record: 206769

Help! I am at wit's end. Today the 10M band opened for a few minutes here is So.Cal. and I had some W7s rolling in. Before I could pick up the mic, however, the background got very quiet (for a second or less, and then I could hear what sounded like someone local operating off-frequency, but local to me. I couldn't tune in the station, because it was coming in the same from 28.375 to 28.395, and was not USB. Turns out I have some stations operating on 27.705MHz illegally with up to 1KW within five miles of me. Mobile and fixed. I have a perfectly matched AR-10 vertical up about 30' for 10M, and these guys splatter all over 10M from 28.2 to 28.5, rendering it useless at times. I fear that when DX comes in, these guys will also have DX from Jalisco, Acapulco, and the D.F. and I won't be able to hear L.A. stations (about 40 miles west), much less the good DX. These stations are run mainly by Mexican nationals living here in Orange County, and most of their traffic appears to be local (ragchew between stations no more than 15 miles apart). If they were legal, and on a band I could plead my case on directly, I'd handle the problem, but I don't want to risk my license going down there and keying up. I realize that the FCC is understaffed, and that these stations are unlicensed (operating on a government portion of spectrum), so I doubt that the FCC will be interested in any enforcement. Has anyone had any success dealing with a situation like this? How was it resolved? These guys run modified HF rigs and linear amplifiers that could heat buildings in New York City in the dead of winter. Their illegal activities are impeding my rights and priveledges as a licensed U.S. amateur station to operate on the spectrum my license covers.

Before I get any flames about the ID of the offenders, I speak Spanish and understand the QSOs that I have monitored, and these gentlemen are indeed Mexican nationals in their majority, and my displeasure is not that they are Hispanic - because I'm also Hispanic. My displeasure is that I can't get on the band without worrying when they will key up less than 700KHz away, saturate my receiver with their splatter, and keep me off-the-air. When it's really bad, I can't ever have a local QSO with a friend five miles away.

All replies appreciated.

>So, what did make you decide to go from broadcast work to teaching?

I believe that Burt enjoys ham radio, but doesn't enjoy ham radio operators. Face it: Most hams are boring. They talk about the same thing and always exchange the same information about station equipment.

Chasing DX. What's the purpose? Wallpaper. I'll probably never get any DX awards. At last count I had 31 countries and 22 confirmations. Boredom was the main reason. Awards? WAC and WAS are proabably the easiest to get. WAS can be gotten easily if you work QSO parties. Which brings up another topic: Contests. I can't work any more than an hour of any contest. It just gets boring sitting there exchanging signal reports. It's more of an endurance thing than a "see how many stations you can work" thing.

In many respects, I agree with Burt. Most hams are just plain boring and do the same boring things. You have the whole world as a stage, and what do you do? You bore your audience. It's certainly not a performance *I* would pay to see.

Your analogy is a little flawed, Windows is DOS. Windows is not an
Operating System, merely a DOS extension. Sorry.

Hi,

Does any one have Turner microphones in Mint condition for sale?

I'm looking for the +3s or even +2s. Any Info that can lead me to these microphones would be

appreciated.

Thank you,

Roman N2KFL

That is a heck of a story, and the one good thing about the
communication "age" is that we can be vocal about rip-off artists. I
really hate to hear this, because shareware is extremely abused, and
what you did was rare. I have thought about writing some shareware as a
hobby, but if these bad eggs are ruining it for honest publishers, I
might think twice.

Andrew:

Keep in mind, the Maxon has the ability to work with a repeater...the GMR100 does not. The Radio Shack PRS series, require an optional accessory to work with repeaters.

Bill Crocker

andrewg@pitnet.net wrote in article <32E231B1.55B2@pitnet.net>...
Hi!

I am going to purchase a GMRS handheld, but can't decide which one and would like some opinions. I currently own 2 Uniden GMR100's and would like to get something with more features a larger range but can still be used with them. Am considering the following:

-Maxon GMRS 210+3
-Radio Shack PRS-101
-Radio Shack PRS-102

I've got a problem, why do they require you to purchase beer, when we only rent it...How many times do you purchase an artist's (programmer) program package, take it home install it and find out it's a piece of shit. Try returning it, oh you opened the box...Well you're software overwrote the drivers installed in the windows directory for my other program..The artist used the same filename with a dll extension....Will the author come out to my house and fix the agony that will take 5 hours to reinstall, or worseoff, the other program has some obscure write protection in place which prevents re-installing by the already licensed user...Programmers have fucked me in this way more times that I can count. Get a life, stop your bitching and write about something ham related the next time you send a message to *.newsgroups...and have a nice day.....n2cjj@ibm.net

>so they steal product)

By this definition, I have "stolen" every piece of software that I
have bought in the past ten years.

Back in the 80's, I purchased a piece of software (don't remember
the exact name) that was advertised as being "100% dBase III compatible".
The product was about $400, which at the time was roughly half the price
of the dBase product on the market. Even the box that the software
came in (a very professional-looking product) said that the software
was "fully dBase compatible".

Well, lo-and-behold, a "readme.txt" file copied to the hard drive
during installation contained information on dBase commands that were
"not implemented". You could code them in your program, but they didn't
do anything at all. All of these commands revolved around multi-user
database access (RLOCK, FLOCK, and so on). Furthermore, the readme manual
stated that other "multiuser" features were not present (such as the
ability to SET EXCLUSIVE OFF to allow multiuser .DBF access).

Needless to say, I was quite mad, because these "non-implemented" features
means that the software is *NOT* "100% dBase III compatible". I called the
company to complain. They said "sorry, but it >is< dBase compatible, your
program will run just fine, you just can't have two people access the
same DBF file, and that isn't our problem. Oh, and since you opened the
disk pack, the software is non-returnable." A complaint with VISA yielded
nothing, since technically I received the software I ordered (even though
it didn't work as advertised.) I complaint with the CA AG's consumer fraud
division was pointless and got nowhere, nobody there understood the
issue in the slightest..

In the end, I ended up paying something like $1200 (had to go buy a copy
of dBase III after all). Since that day, I have >never< purchased a piece
of software without first obtaining a bootlegged copy of the software to
install and try out first. Is it "theft"? Technically, yes. Do I care?
Absolutely not. I'm not going to get burned again. Just as the other person
indicated, when I do try out a piece of software that I want, and find it

works as I expect, I do purchase it. If not, I get rid of it.

In most cases, I try to purchase products from companies that have a "try before you buy" policy. A 60-day free trial is a real treat to see if a product is really going to live up to its expectations. I am especially suspicious of companies that do not offer such trials, and go through great lengths to prevent you from copying their software, since in many of these instances I suspect they have something to hide.

In many instances, "legitimate" companies that I speak to in the course of my professional work as an author generally indicate (off the record) that they don't mind people "bootlegging" their software to try it out. As long as after you try it out you either purchase it, or stop using it. Their attitude is they would rather have you try out a bootlegged copy of their software to see how good it is rather than have you purchase a competitor's product. Its my opinion that any company or software author offering a professional product that they intend to stand by should not have an anal-retentive policy towards people trying out their product before it is purchased.

Ed Foster, in his Infoworld Gripe Line column, indicated recently that we might see some changes to the UCC (Uniform Commercial Code -- codified laws that govern business transactions) that will protect software purchasers in the future (requiring businesses that sell software to actually live up to their advertised promises).

>However, if in fact you do adhere strictly to this procedure, you are in
>the minority. For every one of you there is probably 1,000 who never
>walk down to the store and plunk their money down.......but continue to
>use the program.

Yes, this is true. However, despite what the SPA likes to paint, most of these people wouldn't purchase the software anyway, even if they had to. Thus, the "15 billion per month" (or whatever the ridiculous number is) that the SPA claims is lost to "piracy" is over-inflated.

Software piracy is a legitimate problem, and companies do need to be aware of it. However, piracy exists in every aspect of commercial goods that can be copied: CDs, tapes, video-tapes, and other commercial products are all copied by people and freely distributed amongst themselves.

>This is a huge problem. I know huge commercial institutions who own
>approximately one copy of MS Windows for hundreds of PCs. And all you
>have to do is listen on the ham bands to see that hams are really bad
>about it.

This is clearly behaviour that nobody can condone. However, I would say Hams are no worse then the general population. They are just stupid and talk about it over the radio.

Fellow Amateurs,

Our radio club is doing some major renovations this year. One big part of that renovation will be to construct a new Radio Console. We would like to have one of those nice one's that you see on the cover of QST or CQ magazine. We don't have an unlimited budget, but we were thinking of possibly doing the whole project in two stages. Perhaps building the main console base and desktop now, and adding the upper shelves later. If you know of a source of nice console design plans or have any input into important things to include at the building stage, please write me.

Thank you,

I didn't say they should be "hard" ... that seems to be part of the
pro-code, work-ethic,
have-to-suffer-to-earn-it philosophy.

What I've said is that the tests should be "meaningful" ... i.e. that they
should
require the applicant to demonstrate an appropriate level of understanding
and
knowledge in the (relevant) material tested. This is contrasted with the
current
"memorize some stuff without really understanding it and show that you're
reflexes
are conditioned to the sound of the beep (sort of like Pavlov's dog)."

>
> Most pro-coders want people that recognize that ham radio is *hobby*
> I've said this before, Carl, and it warrants saying again. HAM RADIO IS A

> HOBBY!

That's where YOU are WRONG ... it's a SERVICE, established by the
government
with specific goals ... NOWHERE in Part 97 does it say ANYTHING about
a hobby.

> You would turn that hobby into an exclusive club for the technically
> elite.

Not so ... that's NOT what I advocate or what I've been saying ... what I've
said it that people should be technically qualified in order to be licensed.
Many of today's beepers are NOT ... there are extras who don't even know
or understand Ohm's law or how to cut a dipole ... that's absurd and wrong.
But the pro-coders seem to think it's fine ... as long as they can beep.

It is MORE than a hobby and you'll NEVER justify the spectrum allocations
to the government no that basis of it being "just a hobby" ... that's a SUICIDAL
attitude for ham radio to present.

> >I agree on the test methodology ... an "open book" exam is fine. The

> >understanding.
>
> The key word here is "what we want" But it's actually what YOU want, Carl.

I think it's safe to say that many others agree with the ideal I voiced.

BTW ... a "not" got dropped from the quote above ... it should read "The presence
of the book will NOT transform a dolt into an EE ..."

Why do YOU seem to want people who can beep, but who DO NOT understand
anything about radio?

If I remember correctly the send and recevie freqs are different which means that they had to have 2 scanners. Also because of the limited range of the mobil telephone, they probably also had to be in a car or van tailing Newt.

>Is there an advantage for range for one over the other?

>Lets not get into SSB, efficiency, and power dissipation.

>With the reduced conduction cycle in class C wouldn't the output
>power be less even though the Bird says otherwise?

>Thanks, Brett

No, output power is output power. The difference between a class A and class C amplifier is the conduction angle of the stage regardless of how it is achieved. The class C stage acts as a switch that dumps power into a reactive tank which is then coupled into a load. It is a very efficient amplifier, so it generates an equivalent output power with less input. The only problem is that the amplifier does not amplify linearly so it will not pass an amplitude modulated signal without distortion.

1400. "This Week in Amateur Radio" Audio Now on the Internet

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-19 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>

Source record: 206788

-
FOR IMMEDIATE RELEASE
-
"THIS WEEK IN AMATEUR RADIO" AUDIO AVAILABLE ON THE INTERNET
-
Producers of Albany, NY-based "This Week in Amateur Radio", the activity's only satellite-delivered news and information service, in conjunction with the Blue Ridge Video and Digital Society of Roanoke, VA, are pleased to announce that "This Week" program audio is now available on the Internet. The service, carried on VHF/UHF repeaters throughout the United States and Canada and on 1860 kHz via WA0RCR, had previously been available only via satellite.
According to "This Week" Technical Director, George Bowen, N2LQS, "This was a big step for us. We're still using 8088s and 286s for all of our internet and data communications and have large piles of coal to shovel into this equipment daily. This was and still is the reason that we, on our own, never offered 'This Week' on the net." The service carries the latest ARRL bulletins and other amateur radio news, the "RAIN Dial-up", contest and convention updates, special events, propagation forecasts, and features from their exclusive staff of "voice columnists".
Blue Ridge's John Campbell, KC4LWI, records the program audio from the bird each Saturday and converts it into an 8 bit wave file sampled at 11.025 kHz. The file is the posted each Sunday on the group's Web site in zipped and unzipped form. Approximate file sizes for the entire 50 minute program are 24 megabytes zipped and 33 megs unzipped. The address for "This Week in Amateur Radio" audio on the internet in .WAV file format is: http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm. The file name is TWIAR (the 3-digit program number) dot ZIP or dot WAV, i.e., TWIAR199.ZIP or TWIAR199.WAV.
Adds Bowen, "Please note that the program is not, and will not be available in any streaming audio format until we are able to upgrade our computer hardware. In the meantime, we have taken this interim step to place our bulletin service on the net. You can download each week's program on Sunday, the day after our satellite feed. The site will also offer the program from the previous week, and well as our first 10 minutes of 'headline news.'"
The program continues to be delivered via satellite, through transponder time and uplink equipment provided by Mike Reynolds, W0KIE, of Tulsa, OK, as a service to the amateur radio community.
"This Week in Amateur Radio" airs each Saturday at 9:00 PM (ET) on the SBS-6 Ku-band satellite (74 degrees W), transponder 13B upper, 6.2 MHz analog audio.

For answers to technical questions regarding the Web page or if you would like to have the audio file e-mailed to you each week, please contact KC4LWI at sparky@intrlink.com. Community Video Associates, Inc., which produces "This Week in Amateur Radio", is grateful for the time and effort put into this project by KC4LWI, Lee McDaniel, WB4QOJ, and the Blue Ridge Video and Digital Society. For further information on "This Week in Amateur Radio" or to become an affiliate, contact Stephan Anderman, WA3RKB, the program's executive producer, at 518/664-6809 (e-mail sanderman@delphi.com) or George Bowen, N2LQS, at 518/283-3665, (e-mail kxkvi@delphi.com). Both can also be reached via packet @ WA2UMX.FN32AW.NY.USA.NA.

Although the temptation is to let your semi-literate, immature tirade speak for itself, I believe that this is as much of an issue for hams as most of the other postings on this group, especially given the magnitude of the problem. Just listen to 2m and 75m. Just because a guy is trying to raise awareness of a legitimate issue shouldn't make him a target, especially when he is dead-on correct and only the most twisted logic could "refute" his statements.

There is lots of bad software out there, and most of the problem is indeed a result of the publisher's application developers taking shortcuts. They need to be called out for this. I share your frustration because I've had all that stuff happen to me several times.

But you appear to make an argument that it's okay to steal because you have been dissatisfied in the past. I don't see how that reasoning holds. Does this propensity to grab anything that's not nailed down and run hold in other areas of your life? Steal a CD because you bought an album earlier and didn't like it? Steal a car because you spend 20 grand for another one and the thing was in the service bay for weeks? The bottom line is that you steal what you can as long as you can easily get away with it. And you're telling KU5S to "get a life"? All KU5S is saying is that not everyone is like you and some would stop this practice if they gave it a little thought. He seems to have a bit of faith in his fellow amateurs, which is welcome and refreshing.

The following is a QST

Ham radio growth takes a nose dive in 1996, the FCC creates a new license free wireless data service and SWL's indicate that they want the code to go away so that they can become codefree HF hams. These stories and lots more on Newsline report number 1014 coming your way right now!

(*****

SLOW GROWTH IN HAM RADIO

The combined number of United States General, Advanced and Extra class license holders is declining, but no-code continues to grow. This according to 1996 year end figures published in the January 1st W5YI Report.

The No-Code Technician continues to show the greatest increase in the number of people holding that class of license. There are now 6.7 percent more Technician and Technician Plus operators than there was a year ago. In fact, some 43 percent of all radio amateurs share these two classes of licenses. That's more than twice the number of only a decade ago.

And for the first time ever, the combined number of Extra, Advanced and General class operators declined in 1996. But that was offset by the growth in the numbers of No-Code techs making for slight one percent growth in the total number of hams coming into the service last year.

What does this all mean? W5YI says that there is a major shift in interests taking place in ham radio. Back in the 50's, 60's and 70's ham radio meant low band DXing, ragchewing and long range operations. That pool of High Frequency operators is now drying up says W5YI.

Others agree. They say that the traditional high frequency operator is being replaced by a massive influx of codefree licensees who have no inclination to ever upgrade. A new breed of radio amateur who seem very content to spend their entire ham radio careers on a single repeater, talking to the same people, day after day, in what was once experimental world above 50 MHZ.

(Via W5YI, others)

(*****

U-NII vs. HAM RADIO

A new wireless personal communications service is coming. One that could signal the end to logging on to the internet using wired phone lines. And that could have an impact on amateur radio. The FCC has issued a Report and Order creating a new service called U-NII. Unlicensed wireless devices will operate using three 100 MHZ wide bands at 5 GHz. U-NII may cause amateur radio growth to slow down. Here's why.

The ruling makes possible low cost and very high speed wireless Internet access over great distances. Up to several miles in some cases. As a result, you can expect to quickly see wireless 1.544 Mega bit per second radio links severely undercutting the costs of high speed lines from telephone service providers.

Once the high speed U-NII modems are available at computer supply companies, it will probably signal the beginning of an end to wired Internet access. It also means that more and more people with even a remote interest in communications will be using radio links to the Internet. That means fewer and fewer will want to study for even a codefree Technician class ticket to talk across town.

Ironically, the new U-NII service shares the already shared Amateur Radio allocation at 5.725 to 5.825 GHz. Under the new rules, the unlicensed radio modems may operate up to 4 watts of effective radiated power. They may use high gain directional antennas depending on the band.

The bottom line is that the general public now has access to high speed radio links to the Internet. This means that they can almost go anywhere and not be out of touch with the world wide web. Those who might have been even remotely considering ham radio as an adjunct to their computers will probably say, why bother. The FCC has now given us, license free, far more than they have ever given to any licensed ham. And they have given us a

ham band to do it on.

Ironically, the no-code Technician class license was created in part to interest computer literate people in becoming hams. It never happened. Now what few might have come over will probably opt for license free U-NII instead.

(Via FCC release, various computer merchandisers.)

(*****

SWL's WANT TO BE HF NO-CODE HAMS

Shortwave Listeners would like to become hams, but only if they can get licensed without having to pass a Morse Code test and have full access to the high frequency bands. This surprising information came to light as the result of an admittedly unscientific poll conducted by the talk radio program "Ham Radio and More."

During the week of December 20th, the ARRL made public a decision by its WRC preparatory committee a decision to recommend that asks the ARRL Board of Directors vote to endorse the retention of the Morse testing requirement at the upcoming World Radio Communications Conference. So, Ham Radio and More host, Len Winkler, KB7LPW, decided to spend the next two weeks finding out what his audience thought. The first week he limited comments to those who favored retaining the Morse requirement. He received 21 calls. What surprised him was the following week when it was time for the anti-Morse members of his audience to have their say. It was not GMRS operators who called in. It was not 11 meter CB operators. Rather, ten of the thirty comments, that's thirty three percent of the comments came from SWL's who feel that its time for a change:

"It's hit a sore spot with me from my own personal experience. I did go through a local group to try and become a ham. I am an avid shortwave listener. I had no problem with the electronic theory and no problem learning the rules and the regulations. But, I hate to say it nut when I got to the code I just fell apart. I did not remain fun. It became work!" Winkler

Winkler tells Newsline he is not surprised.

"It's very interesting the people out there that have a feeling about this. Everybody, ham and non-ham has a feeling about Morse code. It's defiantly thee strongest issue in ham radio." Winkler

Winklers' Ham Radio and More airs live every Sunday night at 6 PM Eastern time over radio stations across the nation. It's also simulcast worldwide on shortwave on 5.070 MHZ over radio station WWCR and in Real Audio on the World Wide Web. What makes Winkler's poll significant is that it's the first such survey that was open to members of the general public. And it definitely shows that one segment of society has an interest in gaining access to the high frequency ham bands and also in seeing that Morse code does go away.

FCC TURNS DOWN MORE PETITIONS FROM EARLY FILERS

The FCC has turned down yet another round of petitions for Reconsideration from three hams asking the agency to reinstate their vanity call sign applications. The applications had been dismissed because they arrived prior to the opening of Gate 2 on September 23rd.

According to the Commission, these applicants paperwork arrived at the FCC's fiscal agent, the Mellon Bank in Pittsburgh, on September 20. That was three says early and made them ineligible for processing.

In November, the FCC dismissed nine other similar petitions for reconsideration based on the same claim.

HAM RADIO FLOOD RELIEF CONTINUES

Ham radio continues assisting in flood recovery efforts in the Northwest, including Oregon, Washington and Nevada. As reported last week, when long distance phone service failed to the Ashland-Grants Pass vicinity ham radio took over, linking the county via HF with the state emergency operations center in Salem. Oregon Section Emergency Coordinator Lew Williams, WD7NML, said Jackson and Josephine counties were the hardest hit. In Jackson County, hams helped provide communication at shelters and also pitched in during sandbagging operations.

In Nevada, Dick Creley, KJ7UK, of Gardnerville says that hams were activated on New Year's Day. They provided secondary communication for the Douglas County Sheriff's Department, the Emergency Management Office and two shelters that housed some 50 residents. Approximately 30 hams in Douglas County and Carson City put in a total of 350 work hours. Creley says that damage was extensive, and the cities of Minden and Gardnerville were isolated.

Bruce Pfeiffer, N7CPP, of Carson City said telephone service remained in operation, limiting the need for ham radio communication support. His wife Sue, N7PRF, and Reed Ross, W7HOP, manned a station at the Carson City EOC, while he and Jo Ann Paul, N7MBM, manned a station at a local Carson City shelter. And in Yerington, Nevada, 17 year old Carrick Dunn, KB7OBE, provided the only communication link between his town and the outside world.

We will have more information on ham radio's role in the Western US flooding as it becomes available.

SPOC LIVES

SPOC lives. At least the SPOC that stands for a single point of contact for repeater coordinators.

On Friday, January 10th, Owen Wormser, K6LEW, the president of National Frequency Coordinators' Council signed and mailed to ARRL headquarters the formal Memorandum of Understanding between the NFCC and the ARRL.

The ARRL had sent Wormser two copies of the MOU both having been previously signed by League President, Mr. Rod Stafford, KB6ZV. To formalize the agreement, Wormser signed one copy and returned it to League headquarters. The other has been retained for NFCC records.

The agreement creates a new National Frequency Coordination Office located at ARRL headquarters that will begin work on phase two of the project. That being the establishment of an ongoing dialogue with the FCC on issues of importance to the coordination community. Work on the creation of this single point of contact from repeater coordinators to the FCC began in St. Charles, Missouri back in October of 1995.

INDIANA CTCSS

You soon may need to have continuous tone coded squelch to use repeaters in the North Central United States. Continuous tone coded squelch is the proper name for PL a Motorola trademarked version of this system. And it now appears as if Indiana will be one of the first states to adopt a statewide Universal PL coding system.

As we head into the new year, plans are underway to develop a PL system across the state of Indiana for all repeaters. The new Indiana Repeater Coordinating Counsel is proposing that each repeater switch to a Private Line input. According to the plan, repeaters in each area of the state will have a common PL tone, something like an area code. This, according to officials, would eliminate most repeater interference and allow development of more repeaters in the state.

The same kind of PL tone system is already being used in states surrounding Indiana. We will have more on this coordinated system as plans develop.

The idea of universal region wide tone coding is not new. It was first suggested by the old Southern California Repeater Association back in 1974. But back then it was not practical because it would have meant a major expenditure to add tone encoders to the popular radios of the day. Hams were not willing to pay the extra cost.

Today its a different story. It is almost impossible to purchase a new piece of VHF or UHF FM ham gear that does not already have a built in CTCSS tone encoder. Because of this, area wide universal tone access to help minimize repeater to repeater interference may become a reality in some

areas.

NO HAMVENTION HOTEL BUSSES

If you plan on attending this years Dayton Hamvention, be prepared to drive to the HARA Arena from wherever you will be staying. This is because the Hamvention will no longer be providing bus service from area hotels to the convention site. The reason? The same as it was the last time the Hamvention was forced to cancel the busses, money. The cost of running the service has gotten so high as to make it impractical to continue.

(Via DARA)

(*****

BAXTER'S COUP

Glen Baxter, K1MAN, has scored a major public relations coup for his high frequency bulletin service. Baxter has managed to get the man known as the nations most trusted voice in America to record identification breaks for his International Amateur Radio Network bulletin service. And according to Baxter, famed CBS anchorman Walter Cronkite endorses the work of Baxters groups:

"Walter Cronkite, KB2GSD, keeps informed about Amateur Radio events by listening to the International Amateur Radio Network and supports ARRS, the American Amateur Radio Association, Walter:" Baxter

"You are listening to the International Amateur Radio Network. This is K1MAN." Cronkite

For those not aware, Walter Cronkite holds a Novice class license and the call sign KB2GSD. Why he chose to record for K1MAN is not clear.

What is apparent is that this is a major public relations victory for Glenn Baxter and one that his detractors will have a hard time brushing off as trivial. Cronkite has been quoted many times as saying he never lends his name or his voice to anything that he does not fully support.

(Via Usenet reports.)

VERMONT SECTION MANAGER RECALL FAILS

An effort to recall ARRL Vermont Section Manager Justin Barton, WA1ITZ turns instead into a vote of confidence.

Barton was re-elected in May, defeating Ronni Stern, KA1NRR by a vote of 234 to 105. The recall petition was submitted last October charging possible irregularities in the voting process.

Recall ballots were counted January 7th by ARRL staff members under the watchful eyes of the Arthur Andersen accounting firm. Also present was New England Director Tom Frenaye, K1KI.

The vote on whether or not to recall Barton was 135 "yes" votes and 257 "no" votes. This making for a clear victory for WA1ITZ and proof that voting patterns have defiantly shifted in the Vermont ARRL Section.

PAST ARRL PRESIDENT CARL L. SMITH, W0BWJ, SK

Noted aviator and past ARRL President Capt. Carl L. Smith, W0BWJ has died. A career pilot for Western Airlines, Smith captured front page headlines and worldwide acclaim in the 1970's when he safely landed a fully loaded Boeing 707 passenger jet with a jammed nose gear on a foamed runway at Honolulu International Airport. Nobody was hurt, and, as Capt. Smith often commented, he barely scratched the paint off the nose of the big jet. Ironically, W0BWJ flew the very same aircraft on his last scheduled trip for Western before his retirement.

Carl Smith's contributions to the Amateur Radio spanned four decades. They started when he was still flying For Western. He volunteered his spare time to serve as Colorado Section Communications Manager and did so starting in 1955. >From there, his roles kept on growing. He served as Rocky Mountain Division Vice Director and then Director before being elected an ARRL Vice President.

During his tenure in this office he served on the Leagues' WRC' 79 Committee attending. He is credited with spearheading much of the work that lead to hams gaining three new bands at 10, 18 and 24 MHz at that 1979 international communications gathering.

Smith moved up to First Vice President, where, under its constitution then in force, automatically made him Vice President of the International Amateur Radio Union. In November 1983 W0BWJ was First Vice President when then President Victor C. Clark, W4KFC, unexpectedly died in office. Smith succeeded Clark as President and served in that office until March of 1984.

Capt. Carl L. Smith was 78 and had been in poor health for several years. He passed away in Colorado on January 9th. A memorial service was held in Denver on Sunday January 12th.

(*****

DX-VK0

In DX, a strike in France delayed the departure of the Heard Island VK0IR DXpedition team from Reunion Island. The group had been ready to set sail January 3rd but was delayed until January 5th. They headed directly to Heard Island without making a planned stop on Crozet.

Also, CBS News reports that British adventurer Sir Ranulph Fiennes has given up his attempt to walk across Antarctica. This, after completing about a quarter of the trip.

Fiennes is reported to be suffering from kidney stones and requires medical care. Morag Howell, GM0MUV, served as the Antarctic base leader. She was active as VP8CME from Antarctica. The walk was to raise money for cancer research.

CALLSIGN - CALLSIGN

Finally, what's in a callsign? In ham radio it could be a licensees entire persona. Literally the essence of his or her being. And that may be the who reason that the Vanity Call Sign program had to come into being.

The FCC's Vanity Callsign Program is causing many changes in what you are hearing these days as in "I know the voice, but the call doesn't ring a bell".

A friend of mine applied for a 1 by 2 call under the program and after doing some research found out that he is probably the first individual ever to hold it. The call was issued to a club in the east in the early '30s. And when the license expired, the call was not renewed, and apparently never reissued.

Under the rules, clubs can get calls that has special significance to the group. The call of the founder of Collins Radio was recently reissued to the Collins Collector Group. And now W8CYE is back on the air. That call was held by Robert M. Drake founder of the R.L. Drake Company, of C Line and L4B fame. The Drake Amateur Radio Club call under Gate 2 of the Vanity Callsign Program. And the Drake Contest Group received the call K8UU.

And in case you have not yet noticed, some of us here at Newsline have new vanity calls as well.

(Via KA8OQF)

1403. Mailloop Upgrade Released

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-19 00:00:00 UTC
From: info@mailloop.com
Message-ID: <5bslgj$a9f@news.mia.bellsouth.net>
Source record: 206791

Mailloop v2.0 is an industrial strength bulk mailer.

Using it is easy:

1) Create a message (http://www.mailloop.com/editor.html)
....by using the pull down menus or
....by using any editor

2) Create a newsgroups list (http://www.mailloop.com/news3.html)
....by filtering an NNTP server or
....by importing from any text file or
....by manually creating with any editor or
....by extracting from any FTP file or
....by extracting from any HTTP file

3) Create an e-mail list (http://www.mailloop.com/em3.html)
....by extracting from newsgroups or
....by importing from any text file or
....by manually creating with any editor or
....by extracting from a WHOIS response or
....by extracting from a fingering response or
....by extracting from a UNIX response or
....by extracting from any FTP file or
....by extracting from any HTTP file or

4) Broadcast the message
....to the e-mail list or (http://www.mailloop.com/embc.html)
....to the newsgroup list (http://www.mailloop.com/ngbc.html)

5) Then process the remove requests
....by using the mailbox processor (http://www.mailloop.com/pop.html)

For more info visit http://www.mailloop.com

1404. Re: Q: CLASS A AND CLASS C AMPPLIFIERS

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-19 00:00:00 UTC
From: Tom Wilson <ka7w@oregontrail.net>
Message-ID: <32E307DA.5284@oregontrail.net>
Source record: 206792

If you don't consider the efficiency and linearity, then your not comparing apples and apples. The class A is a linear amplifier, Class C is not linear but has great efficiency for unmodulated signals.

I read an artical several years ago about thaing HF HAM Radio in the road in 73 Magazine. It was reported the impedance was about 94 ohms, about the same as RG-62. There are several type of "zip line" and I don't know which he was using. Also note, Newark Electronics still 75 ohm zip line.

Without more detail, I rather doubt the above. The only
exception to that are some areas declared histrical
districts. Beyond that I can't see how any court
could interfere with your choice of color for the
exterior of your house.

Hello on the beast of the code. I am teaching a 16 year old boy the code, we started at 30wpm character speed, he is now copying very well at 30 wpm but now has problems copying slow code. He has been at it a month now and guess we want to get his extra right from the get go.
Have fun

Go for it. I sure had thought it over and now I really like my new call. Ex KN9QPF, and WD9AHF. Thought I'd never change it because I got so much grief as an 'early WD9' on HF. It sure is faster on CW. The other side of the coin is, I've heard some fresh 2X3 calls on the air that command a lot of respect by deed, rather than by callsign. I rode along I-75 this past weekend during the 'blizzard' with a couple of guys that had their tech licenses about 3 weeks. Ham radio is still in pretty good shape. Get your 1X2, there's a lot of new kids that will be applying for that call your interested in.

The idle speed didn't drop in your Explorer, because it
is controlled by the computer, which will automatically
open the throttle as much as it has to to keep the idle
speed from dropping.

This is something the anti-code advocates seem to forget. They want re-testing, harder tests, and only want people who are technically elite.

How many times have I posted that I'm only in this as a hobby?

Live better digitally on the twisted pair, and leave radio to us 'geezers'.
That way you'll be happy, and us nasty old CW guys will be happy.
You can save yourself that yearly license fee to boot.

SB DX @ WW $OPDX.288
Ohio/Penn DX Bulletin No. 288

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 288
BID: $OPDX.288
January 20, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N2MAU, K4PC, K4WA, WT4K, W5IJU & ISLAND/DX News, W5KSI, W6OSP, W8EB, NL7TB, AH0W, 4L5A, DL6LAU, DL7VOA, DJ5AV & DX News Letter, F6AJA, G4BUE & DX News Sheet, PP5SZ, PS7AB, RU6BV and SM0BFJ for the following DX information.

3RD ANNUAL W/VE ISLAND CONTEST (by John, NL7TB). "Just a reminder that the W/VE Island Contest, sponsored by the US Islands Awards Program, will take place on August 16 and 17th. We've made some changes and hopefully made the contest more appealing. We ask that you read the contest rules carefully, especially when submitting your entry. Russ, VE6VK, will manage the contest and I will handle the award certificates and plaques. Please check the USI Website for the complete contest rules. You won't want to miss this one!"..... 73, John NL7TB
http://www.owt.com/usislands/

4L, GEORGIA. Al, 4L5A, states he will be very active in CQWW 160M CW Contest. He will be using a Yaesu FT-1000MP and HF2500E amp into a X-Q Quad antenna fixed on 124m tower. He will operate mainly on 1820 kHz. QSL via IK3HHX. There will be a special color QSL for this contest with a view of the antenna.

5R8, MALAGASY REPUBLIC. The "DX News Sheet" reports Maurizio, 5R8FH, is a lay missionary in South Central Malagasy and is active on 20 and 15 meters with 80 watts and a three element yagi on Europe. QSL via I1PIN.

5X, UGANDA (IT'S A FIRST!). Leif, SM0BFJ (QSL Manager for 5X1D), informs OPDX that Gus, 5X1D, will return to Uganda at the end of January. This time he will try 2 meter EME operation (this will be the first time in 5X-land). He will run 500 watt into a 17 element yagi. Those interested to arrange a schedule can write to Gus's E-mail address: jageror@wfp.or.ug He will also be active on 6 meter (50.150 MHz) between 1730-1900z calling CQ with 100 watt with a 3 element yagi. He might do some work on 80 and 160 meters, but his effort will be on 2 and 6 meter.

BRAZILIAN IOTA ACTIVITY. Look for Mel Island (IOTA SA-047) to be activated by PY5AA (SSB) and PQ5L (CW), from February 20-24th. QSL PY5AA via home call and PQ5L via PP5LL. This island is also good for DIB-24, DFB PR-01 and DFH-PR-01 (first). Look for Bailique Island to be activated by Mario, PQ8MM, on February 5-9th. Activity will be on SSB 80-10 meters. This island has an IOTA of SA-045 (also good for DIB 35). QSL via PQ8MM: Mario Gomes, Cx Postal 533, Macapa-AP, 68906-970, Brazil. ATTENTION: Please QSL only via direct NOT via bureau.

DX NEWS LETTER has a new editor as of January 1, 1997. Uwe, DL9GOA, will be stepping down as editor and will be replaced by Michael, DJ5AV. Michael is 58 years old, retired and a well known, active DXer. OPDX wishes him the best in the new position.

EP2DA OPERATION 1967-1971 (Need a card!). Chris, K4PC, has provided OPDX with the following information: "Date: Thu, 16 January
One of our local club members who has traveled abroad, moved to our area abt 2 yrs ago. In a long chat with him, I found out that he operated in Tehran under the call EP2DA from 1967-1971. He told me of some of the contacts, operating conditions, licensing etc. but also told me that he has a logbook in his possession. Unfortunately, he only has a small portion of the logbooks because when he was moved around by his employer, the rest of the logbooks were lost by the moving company. But the log that he has had quite a few US calls. I just thought that maybe there might be a few out there who workd EP2DA who never got a card for this operation. Ops can QSL with a SASE to KD2DY Don Alexander, 330 Appalachian Drive, Boone, NC 28607. Don said if he can find them in this partial log, a QSL will be returned in the SASE. Just thought some DXer's could use this rare info....." 73, Chris K4PC

FRENCH DX NEWS (by F6AJA). Jean, F6AJA, reports that he has received the logs for FK5M (Matthew Island) expedition. The QSLs will be ready in the early part of February and the card will be mailed as soon as possible.... ....Gerard, F2JD (ex-5R8EN, S79JD etc..), hopes to get his Panamanian (HP) licence for this end of January.... Yannick, F6FYD (exST2YD, T5YD etc..), will be in India (VU) for his business, starting next week for one year.

J7, DOMINICA. DL3LAR, DL8OBQ and DL6LAU will be active, February 12th to March 3th including both ARRL contests and the CQWW 160m SSB Contest. They "might" use the callsign J75T for all contacts made. They will have two complete stations with us, including 26m tall vertical for 160/80/40 meters and a 5 element log-periodic for 14-28 MHz. They might signing FG/homecall for a few days February 10-11th. All QSLs should go to DL6LAU, via the bureau or CBA. Carsten Esch, DL6LAU, states, "We are thinking about a stateside QSL-collector for us who might ship us the collected direct stateside QSLs requests (to save some dollars) on both sides (AIR MAIL to US is 2US$ here!) any volunteers???"

JD, OGASAWARA. The "Island/DX News" reports Aki, JD1AMA, is active daily on 1908 kHz and listening 1826 kHz at his sunrise at 2122z.

KG, GUANTANAMO BAY. Bill/WT4K, Jan/K4QD and Rusty/KG4AU will be active in the CQ World-Wide RTTY WPX Contest February 8-9th, as a Multi/Single entry using WT4K's call KG4GC. QSL to WT4K [ex-KQ4GC] with SASE or through bureau. Jan/KG4QD and Bill/KG4GC will also be active February 10-14th on both CW and SSB on all bands.

KP4, PUERTO RICO. Paul, K4UJ (ex KR4UJ), and Steve, K4WA (ex KR4DL), will operate from KP4 January 22nd through January 27th, including operation in the CQWW 160M CW Contest. The contest callsign will be KP4/K4UJ; operation outside the contest on all bands will be KP4/homecall. QSL via homecall.

MEXICO's HAM CONVENTION. The Association of Radio Amateurs of the Republic of Mexico (ARARM) announces the "37th Annual Amateur Radio Convention" to be held July 10-13, 1997, at the Convention Center in Leon, Guanajuato. ARARM welcomes international amateur radio visitors and their families to this event which will include programs on satellite, DXing, packet radio, emergency radio services, etc. in addition to a variety of technical seminars and workshops. As usual, special cultural programs and tours will be available for all guests of the convention. The convention organizers have selected the Real de Minas Hotel as the main hotel. For registration information, please contact Mr. Sergio Valdes Sada XE2RJ at tel: 011-528-357113 or fax: 011-528-353368.

OCEANIA IOTA DXPEDITION. Silvano, KB5GL, reports he and three operators will be operating from Oceania IOTA OC-137 Stradbroke Island, in the Queensland South Coast Island Group. Operations will begin on Saturday, March 15th, at 0530z and terminating Monday, March 17th, at 0100z. Activty will be SSB only: 3995, 7065, 14260, 21260 kHz. Silvano will be operating with his Australian issued callsign of VK4WGL. The other operators will include: Sergio/VK4GK, Angelina/VK4AAC and John/VK4WX. QSLs for VK4WGL go to KB5GL's CBA. All others to the VK4's CBA.

P2, PAPUA NEW GUINEA. The "DX News Letter", report Dietmar, DL3DXX, and Joerg, DL8WPX, will head for Misimi Island where they will stay from February 20th until March 4th. In Papua New Guinea, the team will be joined by Falk, DK7YY, and Juergen, DL7UFN. A licence has been promised orally. Emphasis will be put on lowband CW.

PIRATE ALERT! It has been reported that 8B8KB, worked on 40 meters CW and other frequencies, was a PIRATE. There is no YB8KAR station. DO NOT QSL! The IOTA Dxpedition to Tukang Besi Islands has been rescheduled for March 1997, per Tjok, YB0RX, one of the main organizers. They will use the callsign 8B8WI.

PJ8, ST. MAARTIN. Ron, ND5S, his wife Sue, KF5LG, Bill, W8EB, and his wife Dorothy, KB8ZXO, will be on the island from Feburary 23rd to March 8th, operating as PJ8/ on all bands CW, SSB and RTTY including the WARC bands. They will be using the special callsign of PJ8A again for the ARRL DX Phone Contest the weekend of February 28th through March 2nd. Please QSL via W9NIP for the contest QSOs and QSL via the home callsign for the rest of the contacts. Equipment will be the FT-900CAT that was used by AA8U for his S. Cook trip, ZK1AAU, and an Icom 706. Antennas are

a Cushcraft R-7000 atop the condo complex at the 100 ft. level and an all band 160 to 10 meter inverted V trap dipole. A daily schedule is kept with the hams back home in Michigan at 2030z on 14195 and anyone wishing a PJ8/ contact from St. Maartin may jump in at that time. They will move to another frequency to accomodate all license classes. They generally are on the air 1230z to 1600z each day. Afternoons are spend doing the non ham related activities.

RSGB IOTA (New Checkpoint). The RSGB IOTA Committee is happy to announce the following new Country Assistant and Checkpoint appointments for Brazil and South America:
Helio Carlota, PY2DBU, (*) as the Checkpoint for Brazil and South America (excluding French Guiana). PY2DBU can be reached at:
Helio Carlota, Cx Postal 1296, 13200-970, Jundiai/SP, Brasil.
Or his E-mail address: hcarlota@dialdata.com.br

Ronaldo Bastos Reis, PS7AB, as Country Assistant for Brazil,
Pedro Sirzanink, PP5SZ, as Country Assistant for South America (excluding French Guiana). PS7AB and PP5SZ will act as Assistant Checkpoints when necessary. These new checkpoint arrangements, which have the support of the Brazilian National Society LABRE, took effect on 1 January 1997.

RUSSIAN CAPITAL. Serge, RU6BV, will be active from here starting January 19th for about 3 weeks. From the Russian capital of Moscow, he will be signing with the callsign RU6BV/3. His activity will be on CW and SSB all bands, exclude WARC and 160m. He states this will be an educational trip for him. After his trip (February), he will be sending out special QSL cards for these contacts. QSL cards are already printed. QSLs for RU6BV/3 go to his home address: Serge W. Guryew, Kadoshskay str. 13/1, Tuapse, 352803, RUSSIA.

S2, KUTUBDIA ISLAND (Bangladesh). The DXNS states Vittorio/I1SLY, Fernanda/IK1FLF, and Manju/S21AM, are planning to be active from this possible new IOTA February 21-23rd.

VK0, MACQUARIE ISLAND. As of the beginning of December, there are three radio amateurs who are working at the meteorological station on the island. Operators are Tom, VK0TS, who is a Communications Technical Officer; Eric, VK0KBB, in the engineering section; and Graham, VK0WG, who is attached to the meteorology unit. All have been too busy working during the crew change-over which leaves no time for amateur radio. VK0TS has plans to be active on CW/SSB mainly 80 and 40 meters.

VK0IR HEARD ISLAND DXPEDITION. VK0IR started its radio operations at 0654z on Tuesday, January 14th. Reports indicated that they landed on the island at 2230z January 11th (0330z local time) in 30 knot winds. All operators and equipment were put ashore by helicopter, taking 51 trips over five hours. Presently, activity continues on all bands. Updated information and "LOG INFORMATION" can be found on their WEB-site.

ZF, CAYMAN ISLAND. Bruce, W6OSP, and Joe, WA6VNR, report that they will be operating here as ZF2QM in the CQWW 160M Contest . QSL Via W6OSP.

ZY & ZZ, FURADO ISLAND AND FRANCES ISLAND (BRAZIL). Look for ZY3CEJ February 8-11th, on SB/CW, all bands, usual DX frequencies and the Brazil DX Net. This island does not have an IOTA but is good for DIB-62. QSL via PY3CEJ; or F6FNU.
Frances Island is a Brazilian island located in the Espirito Santo State Group (IOTA SA-067, also DIB-068, DFB-ES-07), and will be active February 8-12th. The callsigns to be used: SSB - ZZ0Z (Lima/PY1NEZ), ZW0Z (Lineu/PY1ADV) and for CW - ZX0Z (Zeca/PY1LVF). Activity will be all bands. Suggested frequencies: SSB - 50100, 28400, 24905, 21200, 18075, 14200, 7060, 3790 kHz and CW - 50100, 28015, 24915, 21015, 18075, 14015, 10150, 7015, 3515, 1815 kHz. QSL via home call or via bureau.

SPECIAL REQUEST (STOP THE MAIL!.) Paul Kidd, A35RK, has requested OPDX to tell its users to pass along the following information. PLEASE DO NOT SEND E-MAIL to Paul. He will not reply to any E-mail requests. Paul states that there is no "real" Internet in Tonga: it's an E-mail-only store and forward system, with a periodic (EXPENSIVE!) satellite link to New Zealand. The cost is HUGE! He mainly uses it for family and business matters. He will not respond to any messages dealing with amateur radio operations.

-=-
SPECIAL NOTE FROM THE EDITOR. Please send all DX announcements/information "ONLY" to the addresses below and "NOT" to the distribution InterNet address of: dxinfo@barf80.nshore.org

I'm ready to modify my FT-50R for the MARS/CAP mod but only because this opens up the UHF transmit to 480 MHz or so. I want this to operate under my Part 95 license (KAF8111) on 462.6/467.6 and 462.675/467.675. Besides no being type-accepted, does anyone know of any compelling reason NOT to perform the keypad solder jump 1 removal mod? Please post or email me if you feel I'm going to make a grave mistake in accomplishing this mod. Thank you in advance.

In article <5bpkm8$fpo@phaedrus.kralizec.net.au> richardm@zeta.org.au (Richard P. Murnane) writes:

> NO CLASS LICENCE FOR AMATEURS

>The WIA's position is that, while Class Licensing notionally offers a "fee-
>free"; licence, radio amateurs individually and the Amateur Radio Service in
>Australia, stand to lose a great many advantages which are currently
>enjoyed. Class Licences are not issued to individuals. One of the
>fundamental strengths and advantages of the Amateur Radio Service is
>that each amateur operator must be qualified, and is individually licensed
>by his country's administration. Each amateur and each amateur station is
>known to the administration. That is the way it is around the world.
>Individual licences is one of the cornerstones of how the Amateur Radio
>Service gained and maintains its recognition by the ITU and representation
>at international radiocommunications planning conferences.

A solution to this problem/issue is a class licence "condition" that operators be qualified to a defined standard and use call-signs issued and registered by a competent and recognised authority. Such could be the WIA as an extension of the existing volunteer examination scheme or even a completely separate "radio amateur licensing entity".

>Without individual licences, the Australian Amateur Radio Service would
>likely not be recognised by the International Amateur Radio Union and we
>may lose representation at the international level.

Supposition!

>The issue and use of amateur call signs would be thrown into question.

see above.

>From their inception, Class Licences have only been issued covering the
>use of type-approved equipment meeting prescribed standards.

True so far, because that has been appropriate for the services class licensed todate.

> Class
>Licensing of amateur radio would mean every piece of equipment would
>have to meet those standards - from microphones to packet radio TNCs.
>That means antennas, too. Australian amateurs would lose the ability to
>construct any item of their own equipment.

NOT TRUE - an appropriate licensing condition could deal with this matter.

>Without individual licences accredited by an agency of the Australian
>Government, the ability to operate your own amateur station in other
>countries, under reciprocal licensing agreements or through direct
>application to the administration, would be lost. Your status as an amateur
>radio operator would not be recognised.

>Under Class Licensing the ability to recognise and act against amateur-
>band pirates would be seriously compromised.

These points could be dealt with by a non-SMA licence/call-sign registration entity.

>There is very real likelihood that the Amateur Service in Australia would
>suffer from being identified with Class Licensed operations of low
>specification such as that on the industrial, scientific and medical
>equipment (ISM) bands, or the "anything goes" CB service.

That has more to do with content of transmission and operating habits!!!

>"Without a fundamental and far-reaching rewrite of the definition and
>operation of Class Licensing as presently defined in the
>Radiocommunications Act, the Amateur Radio Service in Australia would
>be disadvantaged and altogether badly served by coming under a Class
>Licence,"

NOT TRUE - simply needs appropriate application of appropriate licence conditions.

>As previously announced in WIA News, the WIA is to present its completed
>submission on Amateur Radio Service licensing to the Minister for
>Communications and the Arts, Senator Richard Alston, on 12 February.

Don't lose sight of the underlying reason for class licensing from a government/SMA perspective. It's intended to reduce government involvement in radio communications and spectrum management, not maintain the status of the amateur service.

With a positive, and forward looking approach, there is a real opportunity to manage the amateur service in a way that best meets the needs of amateurs and which is not simply the "least effort" solution for the government.

1417. Kenwood TH-79A(D) advice.

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-19 00:00:00 UTC
From: Scott Anderson <saa@helios.ece.usu.edu>
Message-ID: <32E2A123.2DC3@helios.ece.usu.edu>
Source record: 206805
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I am in the market for a handheld, dual-band transceiver.
I have previously asked about the Yaesu FT-50R and have
received many favorable responses. I am trying to compare
it to the Kenwood TH-79A(D), and am having a hard time
finding reviews or resources on the Kenwood.

I am interested in opinions of the TH-79A(D). Especially
from those who have owned and operated one. Is durability
a problem with the Kenwood? Does it have the quality that
I might expect given the $100 price increase over the Yaesu?

Thanks in advance for any advice!

Scott Anderson

-
Here is a summary of news items covered on edition #199 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 24-Jan:
-
1. Little LEOs Seek Status as "Emergency Adjunct", Threat Remains
2. Heard Island DXpedition Works 12,000 Stations in First 2 Days
3. Computer Problems Again Delay Issuance of Vanity Calls by FCC
4. MIR Ham-Astronauts Switch Places, KC5HBR Operations Uncertain
5. ARRL Resumes License Renewal Notices to League Members
6. "Tower Safety" - NEW FEATURE with Greg Stoddard, KF9MP
7. "This Week in Amateur Radio" Announces Internet Availability
8. Special Event Station Calendar
9. W3USS to Be in Operation during Presidential Inauguration
10. Jim Talens, N3JT, Leaves FCC for Private Practice
11. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
12. Weekly Propagation Forecast
13. "The RAIN Dial-up" from Chicago
14. AMSAT-Qatar Joins Family of Amateur Satellite Enthusiasts
15. RS-16 Configuration Announced, Russian Bird Launch Next Month
16. Ken Cornell, W2IMB, SK, Renowned "Lowfer" and Author
-
Funding for the program's transmission and production expense was
provided this week by a grant from the Columbiana County Amateur
Radio Club, which carries "This Week in Amateur Radio" on the
KD8XB repeater in Lisbon, Ohio, serving East Palestine, East
Liverpool, East Rochester, and East Central Ohio on 146.805 MHz.
Presentation of "The RAIN Dial-up" has been made possible by a grant
from Therese Cheney, N0YNQ, of Mounds View, Minnesota.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
```

VHF/UHF repeaters throughout North America and on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

>THAT IS A GREAT ANSWERE...KJ7O

Yeah, I know, but nowhere as earthshaking and groundbreaking as yours. The all-caps rendition was great too. What I want to know is how you managed to double-quote me. That's a trick I've never even seen a true computer illiterate pull off. I'm sure when you learn the technology, we'll be even more blown away. BTW, good luck with your new call. When it comes, perhaps you'll be among the elite with a W at the beginning and end of you call. Anything less, and I'm afraid you're not a real ham. For instance, a call with a W at the beginning, a D at the end, and an A4 in the middle.

73

ANNOUNCEMENT
Shortwave & Radio Catalog
of Hypermedia Links
http://itre.ncsu.edu/radio

Shortwave / Radio Hypertext Catalog on the World Wide Web (WWW)
serving the radio enthusiasts since March, 1994
#50 #50

AVAILABLE ON-LINE NOW
ISSUE #50

A new on-line catalog of hypertext links to FTP, GOPHER, and WWW files and services for the Shortwave Listener and Radio enthusiast is now on-line. This issue includes links to broadcaster schedules, digital audio files, graphics, mediumwave, shortwave, FM, Ham Radio, FCC, and other files associated with radio.

Over 1400 hypertext links (and still growing) are listed. These include direct links to Shortwave, AM, and FM broadcasters, Solar reports and images, Scanner information files, audio files, internet broadcasting, ham radio info, radio reviews, info for the novice and much more. All these available with a click of your mouse via Netscape, Internet Explorer, or whatever browser (return key for NCSA lynx users), and the catalog is searchable!

The URL to put in your hotlist/bookmark file or Home Page:

http://itre.ncsu.edu/radio/

> Rick Rikoski

Well, other arguments aside, if its so easy, why aren't there more
generals/advanced/extras. And certainly the brilliant elite who you claim
to represent should have no problem mastering the memorizable exam content,
let alone a simple motor skill like cw.

And since there's so much vhf/uhf knowledge floating around there ought to
be plenty to do to keep those who don't choose to upgrade busy. I asked a
vy technical friend of mine what he wanted to do on hf. I expected answers
outlining great plans for scientific research and utilization of "cutting
edge" technology. He told me "same things as you: ragchew, chase dx, etc.
Well, in that case, he did the right thing by not pursuing the "whine"
philosophy utterly and he just passed his 13 wpm. He will still, i
imagine, argue against the code as a requirement. But at least he had the
good sense not to let it stunt his possibilities now...

73 and 88, where applicable.

Quite humorous..... but, at least I know that there was enough reason for you to pen your letter. Pretty obvious, there are many, many individuals who think and reason that the ARRL is not in the average ham's best interest. I, for one, will never belong to that organization even if the FCC decides to do away with ham radio and the ARRL is the only voice left.

Good luck with all the trash that the ARRL sponsers on the bands and may all your QSO's be wiped out with some silly contest!

Wyatt

>Agreed ... the written tests are NOT "hard." Certainly not "professional
>level."

I didn't know they were supposed to be hard. And could you elaborate a little more on what you consider to be "professional?" The word gets confused with "expert" a lot, but the two are totally different.

>I agree on this, too ... problem is again that most pro-coders don't
>want a bunch of new hams that are smarter and know more about
>radio than they do ... (but they have to beep)

Most pro-coders want people that recognize that ham radio is *hobby*
I've said this before, Carl, and it warrants saying again. HAM RADIO IS A HOBBY! You would turn that hobby into an exclusive club for the technically elite. I can see where you're no different than the pro-coders that you denounce. The following is even further evidence of that.

>I agree on the test methodology ... an "open book" exam is fine. The
>presence of the book will transform a dolt into an EE ... it is reasonable
>to allow reference works for looking up information ... what we want is
>people who KNOW HOW TO FIND THE ANSWER/SOLVE THE PROBLEM,
>not people who simply parrot back something of which they have ZERO
>understanding.

The key word here is "what we want" But it's actually what YOU want, Carl.

Although I doubt you'll respond to me since you only seem to respond to two types of messages 1.) Flames, in which you usually post more flames, and 2.) People you agree with. You've conviently ignored any attempts at a logical debate on the subject of code, or responces of those who are only in ham radio for the purposes of it being an enjoyable pastime. I've come to the conclusion that you only want to expound your own opinions and engage in name calling.

1436. WANTED: 450 Mhz. crystal or synthesized ALPHA NUMERIC pager

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-19 00:00:00 UTC
From: Patrick Cook <pcook@dimensional.com>
Message-ID: <Pine.SUN.3.95.970119015415.14337A-100000@nova.dimensional.com>
Source record: 206841
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.swap,rec.radio.amateur.misc,rec.radio.scanner

Hi everyone:

I am looking for a 450 Mhz. crystal or synthesized ALPHA NUMERIC pager capable of receiving (or recrystallable to receive) the frequency of 449.750 Mhz. Reason being one of our local clubs has a repeater on the 449.750- repeater pair capable to transmitting to pagers as if the pager was a radio receiving packets.

The pager **MUST** be 512 bps. POCSAC on the 70 cm meter band and a Motorola brand (There are several companies here in town where I can go to have the crystal installed). I'd prefer an Alpha Numeric pager over a numeric one because of the various message codes that are uninterpretable by a numeric pager.

I have an AT&T numeric pager capable of receiving a frequency of 158.700 Mhz. for trade.

If you wish to recrystalize the 70 cm. pager before shipping or if you have a pager that meets the aforentioned requirements, please drop me an email at pcook@dimensional.com to discuss logistics of such a trade. Each party pays for their own shipping and handling charges.

If you'd like to BUY the AT&T pager, email me at the above address to discuss price (I'm willing to offer $30 bottom price).

Many thanks in advance and 73's for now my friends!! :-)

Hi, I'm looking for help with an Ameritron AL-80A amplifier. As I was loading it up, I noticed a blue arc coming from the starboard side of the unit (The side away from the tube).The ten amp fuses did not blow. Since then I can't control the grid current. The only thing that I can see that would arc on that side is the 115v relay. I respect the potental voltages enough where I'm a bit timid to stick a probe in there while the unit is plugged in and the power turned on. Any suggestions would be greatly appreciated. You can E-mail me at: ka1dza@aol.com. Tnx in advance es 73, Bob

Hi, I'm a no-coder and I beleive the code should stay so that the
HF bands don't become like the 11 meter band (CB)...

They say that Ham radio is a HOBBY, well then you should read what
the definition of HOBBY is:

HOBBY --- something that one likes to do in one's spare time.

This should tell those who wants to get on HF, they should learn
the code, in one's spare time...

Jim:

I hope that your attempt to educate turns even a few people around. Hams have to be the worst software thieves in existence. All you ever hear is stuff like "Oh, you like that program? Why don't you send me a copy?" and the deal is done. I deeply resent that because I pay out the rear end for their dishonesty when I walk into a software store and buy product.

The bottom line is that it appears that a large number of hams are dishonest, and they steal software simply because they can get away with it. It's sad and surprising because lots of these people seem otherwise fairly normal.

Good luck!

Dave K9XK

Tom, Carl is a walking oxymoron..or is that just...well, you het the
picture. As far as debate is concerned, Carl aka Mr pottymouth, is the
master of it. And he is a far from logic as a Vulcan is from expressing
human emotions. Forget Carl, he's in his own little Burt world. So be
it, let him and his buddies (lennart and crew) have their 15 minutes of
famine.

Off to work the VK0, ragchew and contest. WHAT A GREAT HOBBY. What
makes it better is knowing the likes of Carl never gets to enjoy it. His
hobby is pissing and moaning. I'd join but the entry requirements are
too steep...I think it's sonething like banging your head against a wall
till someone tells you too stop..catch is, no one every does

Hams aren't any different from the rest of the population, Dave. Most of us have been burned too many times by products that do not work as advertised. In the case of software, I am not aware of any commercial software that you can return for a refund after you try it. I don't buy software anymore without trying it first. If this means a bootleg copy, then so be it. I spent thousands of dollars on garbage software before wising up.

I do pay for software that does the job I need to do.

Unless there was some HOA that he was a member of, and had deed restrictions on his title, upon what authority could the requirement have been based? If he and/or his local law enforcement was not aware of the applicable laws and pre-emptions, then the mini-fascist lady could easily get her way. The only way to prevent this from happening to you is to be aware of your rights. Phil?

Well, not completely true. A codeless tech can "do" CW on any band s/he
has access to (which is basically 60mhz and up). There is nothing in the
regs that prevent this.

Tom:

While I abhor software theft, I do think that your point about bad product is valid. Some software is trash and retailers and publishers need to make trials available.

If you do use a bootleg copy to evaluate it and then either get rid of it or buy it, you are in effect establishing a policy that the publishers OUGHT to offer. I have mixed feelings about this kind of "theft". It seems that you can make an moral and rational argument for it. (not like the bozos that say that it's too expensive and that the publishers are "ripping off" the poor public and ought to be penalized, so they steal product)

However, if in fact you do adhere strictly to this procedure, you are in the minority. For every one of you there is probably 1,000 who never walk down to the store and plunk their money down.......but continue to use the program.

This is a huge problem. I know huge commercial institutions who own approximately one copy of MS Windows for hundreds of PCs. And all you have to do is listen on the ham bands to see that hams are really bad about it.

Check out our selection of goodies :Amateur Radio related Ham Tool Kit CD ROM, GSM Mobile Phones and accessories Electronics and so much more at our web site http://sphynx.com/murphy

To Check out our Stun Gun offer ..keep readingï¿½

What is a Stun Gun?

A Stun Gun is an electrical self-defense device that puts out a high voltage and low amperage shock. By merely touching a person with the stun gun, he is immobilized for several minutes with no permanent harm. Stun Guns are considered reasonable force to resist attack. They can be used many times to ward off attackers before the batteries need replacing.

Our Current Best Seller is the "Talon 250"ï¿½."The Finest Stun Gun in the World!"

Features:

Curved Head.
Strength: 250,000 Volts.
Power requirements: 2 X 9V Duracell Batteries (included).
Complete with hand-strap and belt clip.

Effects of the "Talon 250":

The Talon 250 Stun Gun does not merely rely on pain for results. The stun gun works on the muscular and neural system. A short blast of ï¿½ second duration will startle an attacker, cause minor muscle contractions and have a repelling effect. A sustained blast of 1 to 4 seconds can cause an attacker to fall to the ground and result in some mental confusion. It may make an assailant unwilling to continue an attack. A sustained blast of 5 seconds can overwhelm and control the attackers neuromuscular system IM-mobilizing him, causing disorientation and loss of balance. He will probably fall to the ground, feeling weak and dazed for some minutes afterward. Full recovery in this instance takes about 10-15 minutes. The "Talon 250" is effective through 1/2inch of clothing.

TALON 250 STUN GUN: ï¿½95 (Batteries included)

Methods of payment:

We accept payment by ACCESS, VISA or MasterCard.
NO Commission charged on credit card orders.

I don't know the specifics of the case, but most likely the
local ham lost in a court of law. I read a couple of years ago
in Money magazine about a couple in Washington (near
Seattle I believe) that was sued by their neighbors over the
color they had painted their house. Although there were
no CCRs, the neighbors apparently won and the couple was
ordered to paint their house again a different color. I don't
know if the couple appealed or not.

Damned few, I would venture to guess ... the pro-coders place virtually all
of their emphais on CW "skill" and many of them see no problem at all in
an extra who doesn't know Ohm's law or how to cut a dipole to resonance,
as long as he can beep at 20 wpm.

> You know when all it takes for a general license is to memorize the

> The test ought to be upgraded and the incompetents weeded out.

The problem is, there are many imcompentents amongst the incumbents.
Most of them are amongst the pro-code contingent and they're scared to
death of losing priveleges if sensible rules, tests, and licensing
requirements
are instituted.

The idea behind the ASP - Association of Shareware Professionals - is to
try to
put some guidelines for the shareware developer in place. If you look
for
the ASP logo in a shareware package (most brag about it), you will
usually
get a better product, since it's usually been reviewed by a panel first.
And you will usually have a lesser chance of not receiving
acknowledgement.

1459. !!! YAESU FT-8000 MOD REPORT

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-20 00:00:00 UTC
From: 1 <ACABAMS@WORLDNET.ATT.NET>
Message-ID: <01bc0725$f7c50580$3f7174cf@default>
Source record: 206665

I performed the wide transmit mod for the Yaesu 8000, the mod which requires you to remove the # 6 component from the left, on the panel behind the lcd. I also played with the remaining diodes, but they only limit your freq range. The mod works great, but does not recover the cellular receive.

Any one have any info?

Thanks

kc5egg@ix.netcom.com(Gerald Schmitt) wrote:

>Also to hear other tell it, learning those conditioned responses is one
>Hell of a lot easier for some folks than others.

> Jerry

I'm starting to beleive this is true. I had absolutely no trouble
learning code, and by the time my novice license had arrived, my
speed was around 18wpm. I never experienced any plateaus until
I got to speeds where I couldn't write fast enough to get it on
paper, though I can still copy it in my head. It's been hard for me
to imagine anyone having problems learning code, but after hearing
some of the stories, especially from credible people, such as Gary
Coffman (not Crybaby Carl) I am starting to see the frustration some
people are having and their distain for Morse code. However, it's still
a requirement! While it is, if you want the privileges, you still need
to learn the code.
Code is still used world-wide by a very large portion of the ham
population. Over the next decade or so, I feel that it's usage will drop
as the availabilty of digital equipment becomes readily accessable. SSB
took the place of AM in the same manner. That leaves us with the question
on how to go about the transition of removing the code requirement from
amatuer testing and when to implement these changes. Also, the question
of how to make this change needs to be brought up. Bill Sohl has come
up with a few ideas, but instead of anyone following up on these threads,
the code, no-code bashing goes on. When someone calls me a beeper (or anyone
that beeps), because I use CW (at times) I find it hard to give their opinions
any credibility, the same as when someone calls a no-coder a person with
a welfare mentality. Hell, if everyone on USENET got along and agreed with
everbody else, it would be too boring to bother with. We need to get on
common ground with this and find some plausible solutions. I definitely
don't have the answers, but with the combined effort of the people on this
newgroup, the answers may be found. If not, back to the flame wars.

Beep Beep!

Craig,
Wouldn't laser dispersion cover more than the visible surface of
the moon at 280,000 miles? You wouldn't have to keep the laser on just
one spot (Sea of Tranquility) unless your running a mil standard laser
or something along those lines. Just illuminating the moon should be
enough.
BTW, I like the 448 Tera Hertz bit. At first I though it was a typo
for 70cm ham band..<G>

Commonly Used Frequencies for Mir Radio Traffic (MHz = mc):

Amateur radio:
145.550 MHz simplex
435.775 MHz uplink/437.975 MHz downlink
435.725 MHz uplink/437.925 MHz downlink

Used during Atlantis visit:
143.625 MHz (VHF-1, Mir to TsUP Moscow)
130.165 MHz (VHF-2, Mir to Shuttle)
121.750 MHz (JSC/MCC to Mir)

Cosmonauts also use:
145.200 MHz uplink/145.800 MHz downlink

All right!! I knew morse code before getting my ham ticket from
teaching it to my scouts. The kids learn it awful fast!! I could
pass the majority of my kids through the 5 WPM test at the end of the
year no problem. Some will do 10-12 in that 6 month period. Think of
this folks, the kids learn it in 6 months, and that's at one 2 hour
meeting per week (Of which 30 minutes max are dedicated to code
practice).. Think it's too hard to learn? You're spending too much
time bickering.

Also very true. But how many of us can afford that good lawyer?? That's what I fear will have the most effect. Being right and legal is one thing...being able to afford to defend yourself is quite another. Lots of people have been driven into bankruptcy proving their innocence.

I need info or a source of info on a french military radio set.
I beleive made in the US, looks similar to a american AN/PRC-104.
Probably manufactured in the 1980's. VHF FM? SSB? Data modes?
Approx: 28 lbs, 8 x 10 x 3
Freq's: 33 to 47
Markings as follos:
STTA
EMETTEUR-RECIPTEUR-ER79A
MARCHE No74/83006

STTA
CASE CY 744 A/PRC
CSF.79 Bd HAUSSMANN PARIS

Any information would be appreciated.

If you would have bought a used Mac it probably would have come with a
word processing program (I forget what Mac used before Claris) and you
would have only paid $200-$250 total for the unit, a power cord, and the
keyboard and mouse. I know Apple itself is on its last legs, but used Macs
still have a lot of life left in them. I've heard of people who still use
Mac Pluses, made around 1985-86!

The couple lived in a planned community that required approval
of a board to paint a house any color not on an approved list.
The couple painted the house a very bright color not on the
list. They repainted the house. And I do believe CCR's were
involved. And their house was not in a rural area.

1474. Geographic coordinates of NCDXF/IARU beacons?

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-20 00:00:00 UTC
From: Stan Huntting <stan@mutadv.com>

Hi, and thanks for taking the time to help with this problem.

I am putting the final touches on a program to aid DXers in monitoring the NCDXF/IARU propagation beacons. One of the program's features is short- and long-path beam headings to each beacon from your QTH. For that, I need geographic coordinates for each of the established beacon locations. The NCDXF spokesperson doesn't know this information. Can you help by providing the location of a beacon near you? The complete list of beacons is available at the NCDXF Home Page, http://www.ncdxf.org/beacon.htm

My preferred format is Latitude and Longitude, in degrees and decimal degrees (DDD.ddddd), referenced to the WGS84 datum. Having said that, I'll be happy with whatever I can get. Even the name of a city or town would be an improvement in most cases. For many, I currently know only the country.

When complete (as soon as I can get these locations) the program will be distributed from the KaWin Home Page as FREEWARE, so pitch in and be a part of creating this new tool. Thanks and 73,

Stan

Here's an idea: If you want to try out... say... Windows95, and you
know where you can get a bootleg copy. Go out and buy a legitimate
copy, but don't open it. Get the bootleg, install it, and if you
like it, perfect, if not, return the new unopened package for the
refund, and destroy the bootleg. Problem solved, everyone happy.

I have to agree with both here. I have been shafted by several of those
anal-retentive so called "software authors" I have paid up to 40
dollars for a program, only to find that it was a beta version, it didn't
work worth a crap and it was never upgraded. So I ended up having in a
couple of cases reconfiguring the computer as the software changed
several things in the config sys file and did not state that it was going
to and did I want to. I since have given up on the "shareware" clowns
and only buy top line software from a reputable source. Burned three
times is three times to many to be nice to them guys that wite crap any
more. My advise to the wannabe and at present software/shareware authors
is to either do it right or stay away from it, period..... All you do is
tick off a lot of guys that do a lot of talking (hey, hams talk with the
rest of the world as a hobby) about how they were ripped off by so-in-so.

Fred

I may not always agree with what you say. But I will defend to the
death your right to say it.

Recently have found plenty of "look alike" software in major book stores
and computer stores for a song as far as price is concerned. For
instance, about 2 weeks ago was in a Books and Co. (no I don't work for
them nor am I associated with them in any way other than a customer) and
found a set of four CD-ROMS for around 16 bucks. Word processor,
"excell" type spread sheet, graph maker and a "sticky note" program with
audio message capacity. Price......16 bucks......not to be passed up.
No need to buy the wallet busting stuff.... Just look around. All top
line software and not shareware!!!!!

Fred

I may not always agree with what you say. But I will defend to the
death your right to say it.

Probably a much larger percentage of 'brass pounders' could pass the test than todays crop of no code techs. I wonder how many no code techs have worked Heard Island ?

>You know when all it takes for a general license is to memorize the
>questions and answers when they give you the complete set of both in
>advance and then learn a rote but useless skill like tapping 13 wpm, one
>has to ask is there much difference is there between a ham and a cb radio
>operator.

All it takes for an extra license is to memorize the answers to the questions and pass a 20 wpm test. Today. Tommorrow, it may be different.

>The test ought to be upgraded and the incompetents weeded out.

This is contrary to popular no code on HF theory. We need to UP our numbers by letting everybody on HF without taking a code test, not reduce our numbers by making the written tests harder.

There are some rumors going around that there may be some radical changes made to the licensing/testing system. So I would suggest that anyone interested in getting on HF start learning how to receive and SEND Morse code......

Wouldn't that be a kick in the pants Squiggy ? Soon you may have to not only condition your wetware, but learn how to connect your wetware to one of your hands...... or your foot, or your forehead, whatever..... business oportunity here Squiggy, better talk to the marketing people:

Order yours TODAY !! The NEW SQUIGGY FOREHEAD KEY !! One piece mounts to the adjustment strap on any standard baseball cap - the other piece mounts to the wall with double sided tape. Simply turn the hat around with the bill facing to the rear of your head, plug the wire into the key jack of your transmitter, and you too can send Morse code by banging your head against the wall !! Tired of standing up to send Morse Code ?? No problem. Move your keyboard out of the way, mount the wall contact on the desk directly in front of you, slide your chair back and send Morse code by banging your head on the DESK !!

Every boy wants a Sqiggy Toy - and - so do GIRLS !!!

Don't DELAY - ORDER YOURS TODAY and receive a FREE box of 24 cotton pads, great for stuffing up your nose to stop nose bleeds. Call 1-800-SQUIGGY to order. Nobody else takes DISCOVER cards, so we don't too.

73, Jim KH2D

The HTX-212 will not X-mit out of band, with the exception of MARS/CAP.
Why do you need to X-mit out of band anyway?

I got hit by a flatbed truck and have to get a new vehicle.
I have heard stories of 2M rigs frying Toyota engine computers.
I have been told that Toyota and GM specify 5 Watt limit.

Can anyone offer me any advice?
I am looking at:
Mercury Tracer/Ford Escort wagon (Like this best so far)
Honda Civic
VW Golf
Kia Sportage

I need something you can open up the back of and load up for hamfests
that I can successfully install a 2m/70cm rig in.

Hi Guys,

I have heard that the space shuttle uses CW as a backup mode of
communication. I don't know if this is relevant or not to retaining CW
as a amateur radio qualification but I think it points out that there
are still some bonafide uses of CW out there. Also, I seem to remember
that Scott O'Grady, whose plane was shot down over Bosnia, communicated
with his rescuers via code until the last moment. Apparently, the
rescuers won't pick up an airman unless they have voice confirmation.

>>the right to "use" the software, not own the software.

What license. Such alleged licenses have yet to win in court.
I assume you are talking about shrinkwrap and/or shareware.

In the shrinkwrap, the license is NOT agreed to by anyone just
because they purchased it. In shareware, there is no license
at all...only an expectation based on honesty that users will
pay for it if they CONTINUE to use it.

As to ownership...I own all the software I have. It is not leased
anymore than the books on my shelves are leased. There has
never been any case involving over the counter software that
has established that the purchaser only has a use and not actual
ownership of the copy they bought.

>>(This is sort of like the difference between renting and buying
>>a home...)

>>You gave your word, and agreed to these terms before you began
>>using the software. You most always have the option to return

>>the product if you can't agree to the terms.

Not true for most software, especially shrinkwrap. Once its
opened you can't return it. In any case, I stand by my comments above
also as to ownership and licenses.

>>Here's a web site with some interesting facts on the subject.
>>(this site may be gone now?)
>>http://www.bsa.org/piracy/piracy.html

>>Please don't take food from the table of these hard working
>>individuals. Instead, help educate others. Software prices
>>will vary with supply and demand. More sales means lower prices
>>along with new versions.

Nothing wrong with being honest, but it works both ways too.

>>Most software pirates haven't thought through what they are doing.

This also depends on what is or isn't piracy of software.
Go to any computer show and you can buy used software at
very cheap prices. Piracy? I think not.

Now back to the regularly scheduled ham related
newsgroup subjects.

Thank god, that no-code Technicians are not banned from using the key. In this weekend's VHF QSO party I resorted a few times to my key for getting through. With only seven watts and most contesters behaving like the six meter band was just 85 kHz wide, I really learnt, what CW might be good for *grin*: You either have an amplifier, or you have a key. I had seven watts and a key ... and thus a lot of fun.

Funny experience on the side was a 1x2 call, who thanked me (in SSB) for the patience I had, repeating call and exchange several times and with big pauses in between the individual characters, as he was not good at it any more ... if only he knew, that this was my first day of morse key use (I had to signal an error pretty often....) and that it was me who owed to thank him and others for the lesson they taught me on the feasability of the code just by coming back to me, when I switched from SSB to CW.

Dear Fellow Hams,
I have received many telephone calls from well wishers, in regard to my re-election for a 3rd term as Section Manager in North Texas. Winning is important, or I would not be running. But, it is not the most important thing here.

What is, is the integrity of this office and the credibility of the ARRL. Many friends have suggested that I "retaliate" in some way for the unfounded, malicious lies which have been written on the internet by a few persons. I will not stoop to their level.

Mr Allen seems to think that he understands this job, and far be it for me to judge what his real intent is. What I do know, is that his letter which seeks to discredit our team pretty much defines who and what Dave Allen is. I'll let each of you draw your own conclusions.

Mr Allen's writings contain no substance, no plan, and no solutions. Aside from that, they are full of unsubstantiated accusations, misguided conclusions, and nothing of any real value. I might also add that Mr Allen has never called me and offerred any ideas, or even constructive criticism.

Not for my sake, but for the sake of the ARRL and all of amateur radio, I sincerely hope that Mr. Allen takes it on the chin in this election. THAT would send a message into the future, in regard to mud slinging in an ARRL election.

God Bless and 73

Think the ARRL lab did a measurement many years ago. Something like 90 ohms. But REALLY lossy. The insulation used is intended to only deal with 60Hz (and audio freqs for speaker wire use), not RF.

Go with TV 300 ohm twinlead. It's cheap and low loss, unless it gets wet in the rain.

Note that the twinlead insulation material is different than that used in zip cord. Different requirements....

I can't believe you clowns. Here you are, defending theft. But let someone
just *think* about operating a ham radio without a license and you would be
sreaming bloody murder. By the way - you may think that the ham license with
your call on it is yours - it's not. It belongs to the government, which can
revoke its use at any time. You're a bunch of hypocrites.

Read the packages, folks. You don't own the software. If you want to whine about it, then whine about it on the airwaves and keep the crap out of the newsgroup.

Bill, I hope you don't instill your crap to your students. If you don't even bother to read the shrinkwrapped notices, I really question whether you are qualified to teach anyone anything.

Of course it's piracy. What have you got? A dictionary with some of the definitions you don't like substitued with those you dream up???

Idiots.

Cough up a few extra bucks and have a Motorola radio (i.e. Radius line)
programmed for GMRS. You won't be disappointed.

Mastering Morse is not that difficult. It just tales practise, time and effort. People want something for nothing! Well, no one owes you a license - you have to work for it!

It has been my experience in 30 years licensed that the only way to go when conditions get tough is to use CW.

The welfare society in which we live has given many people the idea that they have a God-given right to everything anyone else has. Its bad enough that the exam questions and answers are published - thank Dick Bash for that! This means you don't have to actually know anything about radio theory, electronics, etc. All you have to do is be able to recognize the correct answer. Now, not being satisfied with that many of you want to do away with the code test. Next thing we'll be hearing is why not get rid of licensing altogether like what happened to the Citizen's Band?

As a volunteer examiner I will only participate in Morse Code testing. I will NOT be involved with testing no code freeloaders! I know my attitude is kind of retentive but so be it! I accept the no-code Tech license as a "use-it-or-lose-it" solution but it seems that putting no-coders on two meter CB doesn't solve the problem. May have been better to stick them above 220 where their numbers would serve a useful purpose. The HF portion of the spectrum is crowded enough as it is.

Yes, I know - many of the operators on 75 and 20 sound worse that any CBers ever did. Maybe one day the FCC will crack down on them. Whether or not they passed a code test is really not relevant. 5 WPM is not an unreachable speed. So quit your snivelling and whining and spend the same energy learning the Code. It won't kill you and besides you may just find it is a lot of fun.

Anything that is worth having is worth working for.

Asbestos suit donned - flame away!

> BTW. I understand the US is considering to join (maybe witin this year..??)

I hope that nowhere does arrival of CEPT be seen as a reason to discontinue the issue of reciprocal licenses. There are significant bugs in the way CEPT works. For example, CEPT recognizes two classes of licenses, a full license and a restricted VHF one. The problem in implementation is that countries with such classes have generally based the division on the Radio Regulations which require Morse Code proficiency to operate below 30 MHz. But the CEPT VHF Class only allows use of frequencies above 144 MHz. So say any ham with a VHF license visiting another country and operating under CEPT is denied the use of 6m (and in the UK 4m).

The other bug is that visitors operating under CEPT must still abide by their home license privileges (except for restrictions on territory of operation) and do not get the full privileges of a reciprocal license. BTW, the FCC reciprocal permit works the same way as this, so a visitor to the USA under some future CEPT agreement would not see any change in this regard. But for visitors to countries which do issue real reciprocal licenses, the CEPT permit would generally be a poorer alternative to use, although it has the advantage of being available without any bureaucracy.

Countries which have adopted the CEPT recommendations have NOT stopped issuing reciprocal licenses, and applying for one of these will generally give far superior privileges to the simpler alternative of operating under CEPT without any individual permit.

According to the newspaper reports Newt baby was on a cellular phone
and when monitoring cell phone freq's you can 99% of the time hear
both conversations , (it's like listening to the *output* of a
repeater) You hear the cell tower that picks up the low-power
cellphone(from Newt) and retransmits it to the *base* (installation
that places the 8 - 900 mhz signal onto the regular land-line phone
lines (and to Newt's receiving party)) , you then hear the signal from
the *base* phone installation that transmits the land-line phone (from
Newt's land line party) signals onto the cell tower frequency (and
back to Newt). Personally I'm *thrilled* that Newt got caught
lying/cheating again though it's certainly *not* legal to monitor
cell-phone freqs .... to use a cellphone for
important/private/damaging converstaions proves IMHO that Newt is as
brain-dead (and not *NEARLY* as slick as he thinks he is) as is a
(seemingly) large portion of the DC establishment.

I am having a local line noise problem and am unable to narrow down my search... I can get it down to the approximate area but I need some way to localize it more closely... Anyone have a suggestion as to some kind of a tight directional antenna and receiver setup for accomplishing this???

It is a problem that show up after 5:00 pm in the evening and usually goes off around 8:30 am, so mostly likely coming from some resident home, but locating the source is really the problem...

Any suggestions for the equipment I can buy or build we be greatly appreciated...

Thanks, Ken (K8JWC)

In addition to being very illegal, there is only one modification that
will work, legally or otherwise, to make the 212 go out of band
transmit.

Here it goes. Take a clean work surface, and cover it with something
to ensure that the screws do not get lost.

Take the 212, and set it face down on the surface.

Take a type accepted radio, for the band you need, and set it, face
up, on the back of the 212.

Take duct tape, and tape liberally.

There you have it!

>important/private/damaging converstaions proves IMHO that Newt is as
>brain-dead (and not *NEARLY* as slick as he thinks he is) as is a
>(seemingly) large portion of the DC establishment.

Well, I wouldn't be surprised if a newspaper reported it that way,
but that's almost totally wrong. In the first place, Newt was at
his Cobb County home in suburban Atlanta on a regular wired phone.
Some of his aides were in Washington, also on wired phones. One
political advisor was in Florida on vacation, and dialed into the
conference call using the cellular phone in his car.

Your explanation of how the cellular system works is wrong. The
cell sites aren't repeaters. They either tie directly to a wireline
trunk back to a CO or they relay back to a CO via a digital microwave
link. There is often enough *sidetone* to allow both sides of a

conversation to be heard. Sidetone is what the telcos call the small amount of your voice that they feed back to you so you can tell the phone is "live" and can control your voice level more precisely.

Now what is interesting about this is that the person in Florida would have had his signal handed off, cell to cell, every mile or so. Thus the agents would have to have had some means of tracking the handoffs to the different channels (adjacent cells don't use the same frequencies) or they'd only capture a minute or so of the conversation before there'd be an ugly and obvious break as they attempted to find the new cell frequency. It would require fairly sophisticated monitoring equipment to make a seamless recording. An ordinary handheld scanner and pocket recorder wouldn't do. (You've got a 1 in 400 chance of guessing right at each handoff unless you have equipment that can automatically follow the handoff codes.) Government agencies have the right sort of equipment to do that, as do cellular techs, and a few private investigators probably also have such equipment (illegally under ECPA), but it isn't sold at Radio Shack.

Somebody committed at least two Federal felonies here. If we take the statements of the yokels at face value, they violated both the ECPA and the Communications Act of 1934. They also violated Florida's state anti-wiretapping law. But it is more likely that they are fronting for someone else, and that adds conspiracy to their list of crimes. That brings RICO into play, and a number of Democrat party officials have dirty hands under that statute. I suspect the net is wider than that given the level of sophistication required, and the need to have that equipment at the right place at the right time. I expect Janet Reno and her boss have dirty hands too. This has all the trappings of a black bag job. The timing is too good to be coincidence.

Not necessarily nothing.

> Well, no one owes you a
>license - you have to work for it!

The first clause of your sentence is correct, but the second does not follow. Would you mind quoting me where in Part 97 it says that one must work to gain an amateur license?

>It has been my experience in 30 years licensed that the only way to go
>when conditions get tough is to use CW.

You don't use the digital modes much, do you?

>[...blah, blah, blah...]

>As a volunteer examiner I will only participate in Morse Code testing. I
>will NOT be involved with testing no code freeloaders!

Luckily, thousands of volunteer examiners don't share your patently shortsighted approach. You don't have to sign anyone's 610 form you don't want to, but hey, in America you don't need a licence to be stupid, it's your right!

> I know my attitude
>is kind of retentive but so be it!

It's not "retentive" but rather "exclusive".

I'm not going to comment on the 'caste' comment...

Not quite - UK Novice is 5wpm, send and receive (receive test from
computer-generated tape, and sending from a straight key at a speed of
5wpm or higher). Power output is 3W RF, or 5W DC input. Most HF
allocations are Morse only, and there is no allocation at all on 20m.

>Yes, many countries have a single license - it usually has a strong theory
>test (with no question pool) and code requirements anywhere from 10 wpm
>through about 20 wpm.

UK licensing splits down as follows:

FULL

To get a full licence you have to pass the Radio Amateur Examination
(RAE), which is set twice-yearly, and is currently two multiple-choice
papers (no published question pool, just a syllabus). A RAE pass
entitles you to a full 'B' licence - full legal power from 6m upwards
(UK maximum is 26dBW = 400W on most bands). If you want HF as well, you
must pass the 12wpm morse test, and apply for a full 'A' licence.
Current series are My0xxx for full 'A', and My1xxx for full 'B'.

x - any suffix letter (obviously no Q codes though!)
y - secondary regional identifier (not going to go into these...)

NOVICE

Initially you must do a practical course of about 30 hours run by a RSGB
registered instructor (I'm currently training nine potential novices).
You then take the Novice RAE (one paper, set quarterly), then you can
apply for a Novice 'B' (maximum power as above, 6m, 70cm and some

microwave - no 2m). You can add some HF by passing either the 5wpm or 12wpm code test (12wpm test is send and receive, both from a straight key), and applying for your Novice 'A'. As a 'concession' Full 'B' licencees of one year's standing can apply for a Novice 'A' as well if they've passed the 5wpm test.
Current series are 2y0xxx for Novice 'A' and 2y1xxx for Novice 'B'.

As you can see, getting a UK Novice licence is a lot of work. For any licence (other than a Novice aged under 21) we pay GBP15 A YEAR!

The other comment that I must make is that the UK tests are stiff - no more than about five errors in the entire receive passage, and *no* uncorrected sending errors. Both tests are now in QSO format.

As far as code-free HF goes, I'm not sure. Personally, I like using the code, and increasing my on-air competance in its use. I do use HF phone, though not as much as the key (I've got a TS-450SAT with narrow filters, which is a good rig for both). However, I agree that some throw their key straight in the river as soon as they've passed the test, and never use Morse again. The distinctions talked about by many American amateurs wouldn't work well over here (access only to some voice frequencies for codeless op's, and possibly some data frequencies as well) as bandplans aren't mandatory in the UK, and we, like most of Region 1, don't have incremental licensing. A recent RSGB survey indicated broad desire amongst UK amateurs for retention of the Morse requirement (though, of course, the RSGB membership is skewed towards those who have HF licences).

The realistic viewpoint is that WRC-99 is unlikely to discuss code-free HF (or so the RSGB's journal - RadCom has persuaded me), so I can't see abolition of the international Morse requirement for at least five years. There are issues on both sides:

FOR MORSE
Morse is often the only effective communication method under difficult circumstances.

Morse equipment is often simple and cheap, and is easy to home-brew. Many new amateurs can't afford big, expensive rigs, with the latest DSP technology to dig out those weak SSB signals.

QRP is a lot easier in Morse than SSB - bear in mind that the usual European definition of QRP is less than 5W RF output.

Many people, myself included, get a great deal of pleasure from operating in Morse, and, if the compulsory tests are dropped, then will Morse survive, especially against the background of new advanced digital modes, and DSP technology?

Morse is more spectrally efficient than SSB (especially an issue in Region 1, where some bands are much narrower than in the US - e.g. 40m from 7000 to 7100kHz). [Yes, I appreciate that the nature of a Morse QSO is often radically different to a SSB QSO, and a data QSO].

Even in V/UHF operating, a lot of the more exotic contacts use Morse - for example CW EME, Meteor Scatter and Aurora.

When all else fails, Morse can usually be transmitted and received. I remember reading the (possibly apocryphal) story of the ham in the crashed car who, unable to speak, sent his emergency message by keying his FM transmitter!

AGAINST MORSE
Some people struggle with Morse, and never make test speed. Many of these people want to try things such as HF digital modes, which require no Morse competence at all, but are prevented from doing so by the Morse 'hurdle'.

The use of Morse is being phased out in most of the other radio services - EPIRBs and GMDSS systems have replaced the 500kHz distress watch in many areas (or at least obsoleted it). So why do amateurs need Morse competence any more?

It seems that the HF spectrum may be reallocated within the next five years, with wider bands for amateurs, and more allocations becoming 'Primary' rather than shared or 'Secondary' - so do amateurs need to be able to understand Morse so that other stations can tell them to QSY?

In these days of increasing technology, have advanced digital modes surpassed Morse as a reliable last-resort communications method. If the weak signal claims made by a certain manufacturer's PactorII controller are true, then they are very impressive.

Hand-sent code often decodes poorly by computer, making Morse QSOs inpenetrable to the layman, possibly adding to the supposed 'geek' factor amongst hams(?)

A lot of anti-morse people might find the code easier if they spent more time practising it, rather than complaining about the test. However, this is human nature I suppose :-) I stand by my opening gambit in this section though, that some people find the code impossible.

I think that I must say that the original reason for requiring operators below 30MHz to be competent in Morse - that is avoiding official traffic and other higher-priority users has probably now passed, especially as much of this traffic is now carried in higher bands, and via satellite. However, there are good arguments to keep the Morse tests for other reasons, so the passing of the original requirements is not, in itself, an excuse to abolish the Morse tests.

Finally, a little story:

In the Falkland Islands (near Argentina), there is only one class of Amateur licence - full! I remember reading of a UK class 'B' amateur being issued with a HF licence as his reciprocal over there. He discovered, however, that he couldn't then use the Falkland Islands licence to obtain HF reciprocals anywhere else! The even wierder thing is that the Falkland Islands is linked to the UK (not sure what the

exact relationship is, though).

I hope this is interesting. I originally intended to just correct the UK information, but I hope I've presented a balanced picture pro/anti-code from someone who's really on the fence.

Interesting follow-up mentioned (though please retitle the thread if you're going to broaden the discussion any further). Flames to alt.flame, or I'll send them to /dev/null or the 'dit'-bucket here!

Cheers all, and 73,

David

Yes... Disassemble the case, and solder a 50-ohm, 5-watt resistor
across the two antenna leads. This opens up the receiver to
"full receive" of all frequencies from 0mhz to 1.2ghz.

Everything depends on altitude and whether you have a clear shot at the other station. My best DX was with a Drake TR22 (1 watt to a 1/4 wave antenna) standing in a driveway in San Jose to an identical radio/antenna inside the cockpit of a Lockheed L188 P3 Orion 14,000 feet above Lake Tahoe, about 145 miles airline distance.

I'd expect something like a mile under most circumstances in an urban setting over flat terrain.

Just wanted to get my opinion in here somewhere. My dad recently purchased a used computer for my little sister who is in high school. The computer didn't have any word processing programs on it and this is what it was purchased for. I went in search of the elusive "word for windows." Nobody carried it. I found plenty of upgrades. I expected to pay between $80 and 160 for this product. I finally found it. $320!!! HOLY SHIT! The computer only cost $500!!! I finally gave in for a copy of MS works for $59. The word processor on there works for her needs, but the way the page is displayed on the screen is kind of a pain in the ass. It is only half the page from side to side so as you type to the side of the page, the page shifts back and forth. Stupid. What are my alternatives? 1. Finding someone with a copy of Word for windows would be nice. I don't have a copy. I bought the computer used and the program was on it already. 2. Fork out over 300 bucks for the latest, greatest, wipes your ass when you're done new program.

Q: Why can't I purchace an older version of the software that maybe wouldn't cost an arm and a leg? I really don't think my little sister needs all of bells and whistles on the super duper version. I WOULD BE WILLING TO PAY FOR THIS. (I know...how white of me) I am NOT willing to pay for all of the bells and whistles that the latest program comes with. I don't need them and I don't want them.

Sorry to ruin your party. I just had to get that gripe in there.

Les:

I have the Radio Shack PRS-101. It seems to work fairly well, however the build quality isn't too good. It doesn't have pl tone capabilitys either and won't work repeater offsets. I didn't need these features, and paid less then $100.00 for a used one so I went with it.

I looked at the Radio Shack PRS-102(Motorola) It looks pretty good. I don't think it will do repeater offsets, and the pl tone is an optional accessory. I think it runs about $40.00 for pl capabilitys. The build quality for this radio looks to very good though.

Bottom Line:
If I were buying a new unit then I would definitely get the Maxon 210+3. (I am thinking of getting one myself!) If you can find the PRS-101 used and dont need tone/repeater capabilitys its a good buy only if you don't pay more than $100.00.

Just my 2 cents!

Source record: 206750

Wouldn't it be possible to use a HIGHLY focused, HIGHLY amplified laser beam to do EME? NASA has done it by bouncing one off the mirror left by Apollo 11, so why can't we?

Of course, the only open window would be on clear nights during a New Moon at its perigee. And, the laser would have to be constantly aimed at the small mirror in order to keep contact. Plus, high-power lasers and big telescope lenses aren't cheap.

So, it doesn't look like there will be too many contest awards given for 448 THz EME.

OK. What's wrong with asking the 'ligitimate' owner a chance to test
drive the program at his or her site to see if you like it? This
would be the ONLY legal way to do it, and it keeps you from
cluttering your disk with useless junk.

I don't buy into the 'I've been burned before' bull, although it
would be a rather cute justification for these illegal actions.

> just *think* about operating a ham radio without a license and you would be
> sreaming bloody murder.

Whoa. You're painting with too broad a brush, here. I'm a ham operator, extra-class - the highest license. AA7AS. I've also passed the commercial licenses. I do not, repeat NOT, support piracy, or the nonsense that this guy was spouting, and I know other hams that do not. Piracy is rampant among hams, but I am not sure that it is any less so than the general population.

> I really question whether you are qualified to teach anyone anything.

I completely agree - but unfortunately, ethics is not part of the teaching syllabus in most edu systems - for that matter, if it's not taught in schools, many people have not even the basic ability to reason through the issues. It is my considered opinion that this situation is directly the fault of the educational system, and the fault of parents, who extend the problem of their own ignorance in these critical social areas. Obligation? Responsibility? Not Me, cry the public, and there you have the root of the problem. Add to that, little, if any, ability to understand the difference between a moral and an ethical issue and you have a pretty chaotic consumer-base.

> Of course it's piracy. What have you got? A dictionary with some of the
> definitions you don't like substitued with those you dream up???

What he probably has is more powerful than a dictionary. He's likely got a good case of self-delusion going - and I honestly don't believe you can fix the problem in an adult.

I really like the features of the Kenwood. I have used one for 6 months now and it has everything I have needed so far.

> Does it have the quality that
> I might expect given the $100 price increase over the Yaesu?
The price difference is because the Kenwood is a true dual-band while the Yaesu is only a dual-watch. Comparing the Kenwood to a Yaesu FT-51 would be a better comparison there. I have not had a problem with the Kenwood (and have used it in some tough conditions), but I would suspect that the Yaesu would perform quite well also. My only major complaint about the Kenwood is that the receive audio is not very loud.

If you have checked ftp://oak.oakland.edu/pub/hamradio/mods and found nothing, you're probably out of luck. Mods for Radio Shack radios are quite limited; that's why I never buy one.

If you ever need a Kenwood mod, e-mail me and I will do my best for you.

In reference to the other response you received, I do wish people would lighten up about type acceptance (and I mean the general public, not the FCC, which has more serious concerns than type acceptance to worry about.) I would certainly appreciate reading anyone's comments on this issue.

I don't know about that. Two comsats were disrupted last week, possibly due to coincident high solar activity. One of them has not (yet) reawoken and is being written off.

Extrapolating short term observations to long term predictions is sometimes unreliable.

>Radio Shack.

As of late, any number of popular electronic scanning/communication magazines sold software that decoded the digital data stream that the towers send to phones to control handoffs and so on. Usually these devices sell for about $500.

Now, since the device itself doesn't receive cell frequencies, but instead merely decodes cell data streams (which, by the way, is publically-available information if you know where to look for it) I am curious how you come up with the "fact" that these devices are in fact "illegal" under the ECPA.

I believe the best code course, besides a code class, is a short wave
radio with a bfo. Listenning to actual contacts will help with
learning the code better than record, tapes etc.
Unfortunately, you will have to find stations that are operating at
your speed. Try the noice band, 3.7 mhz.

Works for me 486 - 33mhz, 8meg, soundblaster, etc
(Gotta use EMM386 or as Don has Qemm.)
Decoding takes some tweaking but I got it working in the ham
bands on rtty and weather FAX.

Every decoder I have (hardware) really takes tweaking and
experience, I am still evaluating this
software (shareware), but it looks promising.

I beg to differ. What about some poverty-stricken student who gets
hold of a bootleg copy of, say, Photoshop? The price tag is way beyond
his means and he wouldn't dream of going out and buying a copy even if
the bootleg wasn't available.

There are probably thousands of people out there using software,
albeit illegally, in this way. You can't lose what you never had.

If you want to be able to read a full line of text you must either shorten
the lines (change the margins) or switch to a higher resolution on the
screen. If you switch to the higher resolution and cannot read the smaller
text, just get a larger monitor. Of course that could cost quite a bit.

Most 14" monitors these days can display 80 character lines or more in
800X600 resolution.

I also run ATI Mach64 card. (also QEMM)
My vidio card required the VESA driver.

This card has some strange behaviour with
programs that make VESA calls without the
driver.

Look for 64VBE200.ZIP from ATI. Contained
in this .ZIP is the driver M64BE.COM which
is a DOS TSR.

BTW the program runs in an OS/2 DOS full screen
session (with the tsr installed.)

1552. NEW SOFTWARE ANNOUNCEMENT

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-21 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <5c1rnb$bhl1@mars.online.uleth.ca>
Source record: 206614
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc,rec.radio.swap

For the first time in history, the general public can now monitor solar and geophysical activity IN REAL-TIME, from the comfort of their own personal computer, without having to spend thousands of dollars on elaborate satellite microstation equipment and specialized computer software.

Our new software product is known as SWARM. It is a Solar Warning And Realtime Monitor capable of efficiently interfacing with computers over the Internet to retrieve, process and display solar and geophysical information in REAL-TIME!

In a very real sense, your computer becomes a Professional Warning Center. SWARM provides access to the same data and graphical plots that professional solar forecasters use! For example, you can sit back and literally watch the behaviour of x-rays from one minute to the next, or the velocity of the solar wind as it suddenly rockets upward in response to the arrival of a super-sonic shock-front that marks the leading edge of a large coronal mass ejection related to a recent major solar flare.

SWARM will change the way everyone looks at the Sun and the space environment. Here are a few examples of how.

Amateur radio operators have long thirsted for more accurate and readily accessible information on the geomagnetic field and solar conditions. With SWARM, amateur radio operators will be able to literally watch their radio signals disappear into blackness as solar x-rays from major solar flares produce intense ionospheric ionization. HAMs may also be able to snag rare propagation openings through the dynamic auroral zones when SWARM audibly wakes you up in the middle of the night to tell you that a major geomagnetic storm has begun (a good sign that auroral activity is at storm proportions and may support odd bent signal paths).

Satellite operators will now be able to visualize what is happening in space and will be much better equipped to protect satellite systems by watching the behaviour of energetic electrons, protons and geosynchronous magnetic activity in real-time.

Hydro operators will be able to guard against damaging geomagnetically induced currents by being continually alerted of levels of geomagnetic activity that exceed certain thresholds.

Navigators using low-frequency beacons will be able to tell well in advance when navigational beacons may begin producing positional errors due to enhanced levels of energetic solar protons.

Amateur solar astronomers interested in observing flare activity will be able to see almost every minor and major solar flare by allowing SWARM to

alert them the instant x-rays exceed C, M or X-class levels.

Groups of widely separated scientists (even in countries half-way around the world) will be able to synchronize observation efforts by being able to see solar and geophysical conditions at nearly the same real-time instant, world-wide.

Educators will be able to show students more than just ordinary text-book descriptions of solar activity. They will be able to show them exactly what is happening in space and on the Sun at that instant, opening up limitless educational possibilities and experiments that can be verified in real-time, in class, and even while at home!

SWARM will become an invaluable tool for everyone as we begin to more rapidly see periods of increasingly frequent energetic solar activity during the rise toward the solar activity maximum of Cycle 23.

A complete description of SWARM and its capabilities, including a printable order form and pricing can be obtained from our SWARM WWW page at:

http://solar.uleth.ca/solar/www/swarm.html

Source record: 206615

MC>From: mc@shore.net (Michael Crestohl)
MC>Subject: Re: Thank god for the code (Was: Die, evil code beast! DIE!!!)

MC>Mastering Morse is not that difficult. It just tales practise, time and
MC>effort. People want something for nothing! Well, no one owes you a
MC>license - you have to work for it!

How LONG do you define "time?" Like it or no, some people who TRY to
master morse simply cannot do it in a lifetime.

MC>It has been my experience in 30 years licensed that the only way to go
MC>when conditions get tough is to use CW.

It's been my experience of 45 working years and 40 1/2 years licensed
commercially that the TOUGH conditions are incoming artillery...or
the below-noise-levels of far interplanetary spacecraft. But that is
digression. The issue is NOT whether morse code or even Continuous
Wave is "useful" in your own pet, bigotted opinion but whether or not
it should be used as a TEST REQUIREMENT by the U.S. government.

MC>The welfare society in which we live has given many people the idea that
MC>they have a God-given right to everything anyone else has.

The issue is NOT whether you consider yourself judge, jury and
executioner for breaking your personal beliefs but whether or not
morse code should be logically, legitimately used as a TEST
REQUIREMENT by the U.S. government on the basis of that government's
description of the U.S. amateur radio service.

MC> Its bad enough
MC>that the exam questions and answers are published - thank Dick Bash for
MC>that! This means you don't have to actually know anything about radio
MC>theory, electronics, etc. All you have to do is be able to recognize the
MC>correct answer. Now, not being satisfied with that many of you want to do
MC>away with the code test.

If you've been reading rec.radio.amateur.policy (obviously not or
you'd have posted in there), then you would have had the astounding
revelation that no-code-TEST advocates want TOUGHER written test
elements. Now what?

MC>As a volunteer examiner I will only participate in Morse Code testing. I
MC>will NOT be involved with testing no code freeloaders!

Then you are in violation of 97.525 and should have your VE status
disqualified.

MC> I know my attitude
MC>is kind of retentive but so be it! I accept the no-code Tech license as a
MC>"use-it-or-lose-it" solution but it seems that putting no-coders on two
MC>meter CB doesn't solve the problem. May have been better to stick them
MC>above 220 where their numbers would serve a useful purpose. The HF
MC>portion of the spectrum is crowded enough as it is.

It's not anal retentive...worse; fascist with a touch of the KKK
thrown in. ALL U.S. license classes are defined by LAW as are the
VECs and VEs. You either support ALL or you support NONE. YOU do
NOT make the law nor do you interpret the law that exists.

MC>... So quit your snivelling and whining and spend the same
MC>energy learning the Code. It won't kill you and besides you may just find
MC>it is a lot of fun.

"Snivelling and whining" and "welfare" and "you have to WORK for it"
knee-jerk phrases must sound emotionally fulfilling at your end, but
they betray a closed, dictatorial mindset to all readers, plus
indications of fear that a beloved fraternal order may change from
your concept of it and deprive you of some status and privelege on
the basis of certain tested skills.

At issue is NOT whether or not morse code or continuous wave is to be
"banned" but whether or not it has a legitimate reason to exist as a
qualifying test element in the U.S. amateur radio license
examination. Such legitimacy has to do with whether or not it fits
with the law as given in USC Title 47 Part 97. Such legitimacy has
nothing to do with whether or not you arrive at testing appointments
clad in a white sheet and armband of opinion, refusing to test
applicants for a certain license class.

U.S. law CAN BE CHANGED. It HAS been changed. So can international
requirements.

MC>Anything that is worth having is worth working for.

Yes it is. In a half-century of adult experience, I and others
who are no-code-TEST advocates WORKED for many things, WITHOUT the
closed dictatorial mindset of keeping requirements frozen just
because they happened to be rewarding to a few individuals. None of
us show any of the supposed "welfare" attributes that you impugn in
your note. However, your own little concept of what is "worth"
working for is in great dispute...which you have not justified on any
grounds other than emotion.

MC>Asbestos suit donned - flame away!

You have made your emotional opinion known. Now, we can either argue
on an issues' merits or we can revert to high school teenism with
resort to faux-manliness posturing and nyah-nyah commentary. The
latter is counterproductive for your side since it offers NO
incentive for newcomers, NO encouragement, merely the curious false
military attitude of a gang leader. Your choice.

Source record: 206616

CR>From: craigivey@aol.com (CraigIvey)
CR>Subject: 448THz EME

CR>Wouldn't it be possible to use a HIGHLY focused, HIGHLY amplified laser
CR>beam to do EME? NASA has done it by bouncing one off the mirror left by
CR>Apollo 11, so why can't we?

CR>Of course, the only open window would be on clear nights during a New Moon
CR>at its perigee. And, the laser would have to be constantly aimed at the
CR>small mirror in order to keep contact. Plus, high-power lasers and big
CR>telescope lenses aren't cheap.

The retro-reflectors left on the lunar surface are "corner cube"
arrays. A corner cube has the unique property of reflecting back in
the same line as the incident wavefront. [I would have to check, but
I think the first corner cube array was left by Apollo 12, not 11?]
Such retro-reflectors are excellent for optical ranging, requiring
only medium-power lasers and smaller telescopes...but poor for
bouncing signals to any other terrestrial location except in the
direct line of transmission. That isn't EME as amateurs know it.

Note: The 420 to 660 nanometer "band" isn't regulated by any
government.

Hi Brian,
My name is Bob Pratt, KA1DZA, Mars callsign is NNN0QAD.
I've been a proud memeber of Navmarcorpsmars (Navy,Marine Corps Mars) since 1990. As far as I know, only the military types are paid, the rest of us are dedicated volunteers. The government funds MARS, but as with everything else, we have seen our budget cut every year. The civilian members use their own equipment, unless they can get surplus equipment issued to them (a near impossibility).
Our mission is to provide a communications link, whether it be marsgrams, or phone patches, from millitary personel to their loved ones and visa versa. We also provide emergency communications for the millitary too. Just recently when a ship ran aground on the Rhode Island coast, Mass/ RI Mars provided on site communications for the Coast Guard. Most of us have either been in the millitary (Navy) or knew someone in the millitary, and we know what it's like being thousands of miles away from home.
We just don't operate on the holidays. We are on the air 365 days a year providing important links between those who defend our country and their families. It's sort of our way of paying you back for your service to our country.
If you want any more info, take the time to stop by the MARS station and ask some questions. (It's great duty too)
73 for now, if you need any more info my E-mail is ka1dza@aol.com

after dealing with my 250 being off freq. ie not what the dial says I am wondering if anyone has ever tried to use a Radio Shack digital freq counter for a readout?

I know it should be a simple matter of tapping in at the right place, but there are tubes in there and I am ashamed to say my knowledge of tube circuits is lacking to say the least.

I have tried to use the counter externally, but no luck. Any and all suggestions are welcome.

I got a 15 dB gain from my antenna when I painted it the same colors as the nearest tree. I think this had something to do with phased arrays, seeing that the frequencies of the tree and the antenna now matched. I found that the tree was about 140 wavelengths from the antenna using the frequency of the color green. I matched the electrical length by painting my coax yellow.

Yeah, at least you can get the main screen up if you reboot to DOS mode,
but when you give it the run command, it crashes and burns. It appears
to put the SVGA card in a very strange mode. The monitor goes into sweep
protect. And the only way out is a hardware reset. That's with it configured
for the default 640x480 mode, which should work on any hardware. I haven't
tried it yet in 1024x768. PC is a 100 MHz 486DX4 with 16 Mb RAM running
Windows 95 and using an ATI Mach64 video card and a Soundblaster 16 sound
card. I configured the EMS memory, and at sign on the program Oks that and
finds and checks the sound card Ok too. But give the Run command and the
screen goes dead and the machine locks solid. Not pretty.

>all those who want hf priv's handed to them can move to these countries
>and the rest of us wont have to listen to you bitch all the time.
>grin 73 we8w

First even without the code requirement HF priv's (as you call them) is not just handed out, there is a theory test for general and above if my memory serves me correctly.

Second I, being a no code tech, oops, I passwe my 5WPM so I'm a Tech Plus, but I am not asking for a easy pass, nor are the vast majority of hams. I just can't justify spending so much time and energy for something I may never use,and that is a disproportionate part of the testing. No other part, ie theory, FCC rules etc is required to be fully passed to have access to the higher bands. Why is code so important to you? Is it because you had to do it and you would be PO'd if the rest of us didn't?

The arguement that if no code HF is allowed the bands will turn into CB is so full of holes, just look at some portions of the band now and those garbage mouths have passed the code requirement. Some of the rudest hams I know are some who were Hams long before there was a No-Code Tech license. Code dosen't make a better Ham, knowledge, self dicipline and respect do more than all of the code in the world will ever do. If you want the theory exams to be harder, then that at least has some merit.

Now having said all of that, let me also say that I fully support keeping the CW portions of the bands intact, and will fight to keep them that way. I just can't understand why all of you people who want to keep the code requirement don't put all of that energy into encouraging new Hams and recruting more non-Hams to become Hams.

The usual practice is to agree on air whether you want to exchange QSL cards. It's a waste of time your sending a QSL card if the other person is not interested in them - if you send them via a bureau to someone who doesn't want them then they just pile up in the bureau until they decide to scrap them. All that's needed is something like "QSL via the bureau" on phone (brief if you're in a hurry, longer if you're having a real chat!) or "QSL via buro" on CW and let the other person agree/disagree. I haven't met many people say that they won't send QSL cards, but only a fraction of them do actually send cards.

In some QSOs, for example if you are talking to a special event station or a 'rare' station, then they may not take the time to tell you individually about QSL cards. It still doesn't hurt to ask, but they will also (hopefully) announce from time to time how QSL cards will be managed - sometimes via a 'QSL manager', so listen carefully.

Do be ready for QSL cards to take a L-O-N-G time to get to you - like several months at least if you go via the bureau. But get your own cards, especially to special event stations, out quite quickly as they may stop handling cards after a certain point.

Hope this is useful and not too limited by my own experience!

Best wishes

Mark

Can anyone with Collins 618T experience help me? I (as a member of
Colorado Civil Air Patrol) have installed a Collins 618T into an ambulance
[used as a mobile command post] for disaster response preparedness. The
radio was taken from a USAF MRC-108 communications central. The entire
MRC-108 radio package was installed in the ambulance, sans radio
"coffins". The UHF/AM and VHF/AM radios work perfectly. The problem is
the Collins HF. Receive mode works fine; the antenna coupler aligns to
the frequency selected, albeit a bit slowly. However, there is
no transmit, and the meter on the R/T does not show 1500 Volts. I've
tried 3 different R/T's, 4 different 1500V power supplies, the equipment
rack and wiring twice, and the control head twice. It acts like an open
interlock, but the blower interlocks have been bypassed, and I know of no
others. The only thing not swapped out as yet is the antenna coupler, and
I doubted if that was the problem. Has anyone using the Collins 618T had
this problem? Any help or suggestions would be welcome!

Whew - 140 wavelengths. That's impressive, considering that green light has a wavelength of about 540nm (as far as I remember without checking it!). So your 140 wavelengths is about 75 micrometres. Mind you, the tree is truly a 'long wire' being millions of wavelengths long.

hi all,
one correspondent mentioned an idea regarding the sale of amateur
equipment only to amateurs and may require the showing of your licence
but
that
that may be going a little too far.....

I would like to respond to that by pointing out that
here
in
holland the showing of your valid amateur operators licence is required
when
purchasing your new or second hand equipment either at
markets(hamfests??)or
at shops.if you have only a novice licence then forget getting any HF
gear as
you
are not licenced for it and so it goes on.All sales are registered with
the
government too.It is clear that ether piracy, and that is what it is in
fact
because

they are stealing our air space is on the upward trend the fact that
others
are
using our band portions is because their portion is too crowded and they
hear

nothing on our sections so they say .....why not.As I see it and that is
purely
personal, the getting of the holy buck should if necesary be curtailed
by
the use
of the licence when you buy.Any gear sold illegally then prosecute the
dealer,seller or backyard yobo,when they find that their profits
arewasted
away in
fines and loss of equipment then.....
But more importantly we MUST USE our air ,ether space to the
fullest
and as the old saying goes.don't use it then lose it.if we do that then
the
pirates
may stay away.If they don't then lets band together do a fox hunt but now
we
call it
a pirate hunt(lets face it we have the gear interest etc) triangulate
him
,find him
and report him to the radio branch in your state/town or whatever that is
available
in the states.It is done here in Holland and at times also in australia
for
persistant
offenders.

this may seem drastic and maybe a little daunting but lets face
it
they are
STEALING the ether that we have, and still do have, to fight very hard to
retain as
business and government would love to take it for themselves.

anyway thats how i feel about it and you assume rightly,i feel
strongly

1573. Code Petition

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-21 00:00:00 UTC
From: nz2t@aol.com
Message-ID: <19970121175101.MAA19865@ladder01.news.aol.com>
Source record: 206635

I know this is a "hot" issue, with as many opinions as there are Hams. I intend
to put together a Petition For Rule Making in the near future. I'd like some input,
prior to doing so. I am NOT INTERESTED in emotional statements or flames. Niether will be taken seriously, nor will either be replied to by me. This is just a draft of what I have in mind, so please keep that in mind when reading it. It is also not in proper format for a PRM, but (as I just said) this is just a draft:

CW is currently the ONLY testing procedure that can not be learned by starring at a book or a computer screen. It is a skill that takes practice and commitment. As I see it, that is just one positive aspect of CW as PART OF the testing procedure for amateur radio licenses. Therefore, if we are to replace or modify the use of CW as a testing element, we must also come up with an equally difficult (and yet still relevant) testing procedure. If some of the pundits had their way, all one would need for a ham ticket is to show the ability to push a PTT button on a microphone. After all, what else does one "really" need to know about "radio"? Is that what we are now? Simple appliance operators?

On the other hand, our licensing system is out of control, and does not reflect "reality" either. What I suggest is also predicated on the addition of some
pending HF spectrum, which I believe will be allocated to the amateur radio
service in the near future. If this does not occur, I have an alternate suggestion
within this proposal, which I will state in its proper sequence. Here goes:

1 - Novice License - No change in testing. EVERYONE operating on the HF bands should have a basic understanding of CW, in case of an international emergency, This complies with one of the purposes for which amateur radio is organized. There would also be no changes in privileges for the Novice, which is a learning license.

2 - Technician (NC) - No changes, until allowed by treaty.

3 - Technician (+) - Same test requirements. Additional privileges on limited sub bands on 12, 15, and 17 meters (All allowable emissions). Additonal privileges also on limited sub bands of all spectrum added in any HF band, where voice or data emissions are allowed.

4 - General - Same written test required. CW requirement reduced to 10 WPM.

Privileges same as current Advanced, with full privileges within any new HF Spectrum which may be assigned to the Amateur Radio Service.

Option: The 10 WPM test can be waived, if candidate agrees to take a technical exam, which would be formatted in a manner which can not be memorized. This may include demonstrating knowledge of schematics, ability to use skills such as soldering, antenna construction, or other technical knowledge which would equal or surpass the CW requirement's value to the amateur radio community.

5 - Advanced - This class license would be eliminated! All current Advanced would immediately be upgraded to Extra.

6 - Extra - Same as General with an additional new written test (Element 4). This would be a combination of current 4A and 4B, and would contain 100 questions, with the same passing grade of 74% which is currently required. There would be NO additional code requirement for the Extra Class license. This license, of course, would have exclusive privilges on ALL BANDS, other than WARC.

Well, that's pretty much it folks. I think what I stated thus far gives you the concept of what I have in mind. So, what y'all think?

Thanks for your input and 73

And I'm using mine to satisfy my tinkerer's urges,
being a "gadget nerd" and so forth. Stayed away
for years because I'd rather tinker outside the
hobby than join what I thought to be a cadre of
old fogeys tapping on telegraph keys (sorry about
the stereotype, but that's what I once thought).

The point is, I've made a lot of technical con-
tributions to the local practictioners, and I
probably wouldn't have gotten involved if not for
the no-code ticket. Someday I may upgrade, when
I get the urge to build some HF gear, but I'm a
microwave engineer by trade and most of my messing
around is at the higher frequencies. The tech
license gives me all the privileges I need, for
now.

Best regards,

Marty Jones
And I've made

Hi, I would like to hear from anonyone who has converted one of those Motorola MICOR EMS radios into a repeater. They have a duplexer as well as a control board built in. Looks like a great Emergency mobile /portable repeater project.

I have 4 of these and would like info on converting them.

Thanks,

Scott N0WFL sidener@umr.edu

The ELNEC and EZNEC antenna modeling programs can be returned at any time
for a full refund if you're not satisfied. This has always been my policy
(I am the developer and seller), and is stated clearly at the beginning of
the manual. The return rate has been roughly one in 300.

I've gotten a refund with no hassle for two other programs I've returned.
(One was in the $50 category, the other around $1000.) Perhaps you should
choose your vendors more carefully.

1578. Heard on Heard?

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-21 00:00:00 UTC
From: hans_brakob@adc.com
Message-ID: <853875404.28650@dejanews.com>
Source record: 206640

I noticed some interesting numbers from the VK0IR Heard Island expedition. Their "mission" is to make as many contacts as possible with amateurs all over the world. Their bias is to use those modes which net them the largest number of solid contacts. They are equipped for SSB, Morse, data, and Satellite modes of operation, and have world-class experts in each mode on their team.

They are operating literally "from the end of the earth" at the lowest point in the sunspot cycle, so this might be a good laboratory for observing "what gets through".

Yesterday, after about a week on the island, they passed their 50,000th contact. By a wide margin, old fashioned Morse code has netted them more verified contacts than all other modes combined.

Perhaps, as I have been told, "logic is a systematic method of coming to the wrong conclusion with confidence"; therefor I leave drawing conclusions as an exercise for the audience.

hi all,
one correspondent mentioned an idea regarding the sale of amateur
equipment only to amateurs and may require the showing of your licence
but
that
that may be going a little too far.....

I would like to respond to that by pointing out that
here
in
holland the showing of your valid amateur operators licence is required
when
purchasing your new or second hand equipment either at
markets(hamfests??)or
at shops.if you have only a novice licence then forget getting any HF
gear as
you
are not licenced for it and so it goes on.All sales are registered with
the
government too.It is clear that ether piracy, and that is what it is in
fact
because

they are stealing our air space is on the upward trend the fact that
others
are
using our band portions is because their portion is too crowded and they
hear

nothing on our sections so they say .....why not.As I see it and that is
purely
personal, the getting of the holy buck should if necesary be curtailed
by
the use
of the licence when you buy.Any gear sold illegally then prosecute the
dealer,seller or backyard yobo,when they find that their profits
arewasted
away in
fines and loss of equipment then.....
But more importantly we MUST USE our air ,ether space to the
fullest
and as the old saying goes.don't use it then lose it.if we do that then
the
pirates
may stay away.If they don't then lets band together do a fox hunt but now
we
call it
a pirate hunt(lets face it we have the gear interest etc) triangulate
him
,find him
and report him to the radio branch in your state/town or whatever that is
available
in the states.It is done here in Holland and at times also in australia
for
persistant
offenders.

this may seem drastic and maybe a little daunting but lets face
it
they are
STEALING the ether that we have, and still do have, to fight very hard to
retain as
business and government would love to take it for themselves.

anyway thats how i feel about it and you assume rightly,i feel
strongly
about it so let's hear from others.....73's

1580. R7 on 6m and 2m

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-21 00:00:00 UTC
From: levine@mc.com
Message-ID: <5c374m$9ir@newsy.mc.com>
Source record: 206642

Having just purchased an ICOM 706 and having no 6m antenna, I connected the R7 to to the 706. The SWR was 3:1 or less across the 6m band and using a HF tuner, the 706 reports 1.5:1. Also tried 2m and it seems that the 706 is happy with the R7 across the 2m band also. I worked Michigan and several other states this weekend during the contest on less than 100w on the R7. This is amazing given the trap loss and the cross-polarized signals on 6 SSB.

Anyone else with similar findings?

Unfortunately, most software licenses aren't setup this way.
Borland has a "like a book" license (which I consider perfectly
reasonable), but most of the other software vendors don't. They
claim to retain ownership of the product you thought you bought.
All they say you're buying is a license to use it, IE they are
claiming it is defacto a rental.

Now I don't have a problem with that either, if the software vendors
would treat it like a rental, IE I expect them to deliver a functional
product meeting their claims, I expect them to maintain their product
for the duration of the rental, and I expect them to allow me to cancel
the rental agreement and get a refund of the unused portion of the contract
if I'm either not satisfied or find I no longer need their product. But they
don't do that. They claim that once the shrinkwrap is broken, it is
my problem. They disclaim all liability. And that's defacto a no
warranty sale.

That's why shrinkwrap licenses haven't held up in court. If it waddles
like a duck and quacks like a duck, its a duck no matter what else you
want to call it. The courts have found it to be a no warranty sale, not
a rental, so the product does belong to you, and you can do with it what
you like (within copyright fair use guidelines, IE like a book). If I
own a book, I can rip out pages, scribble in the margins, sell it to
someone else as a used book, etc. If I don't like the way the book
ends, I can rip out the last chapter and glue in one of my own. It
is mine, I can use or abuse my copy of the book any way I like. I

can even burn it if I want.

I can't xerox it and sell copies, and I can't pass it off as my work. That's piracy and plagarism respectively. But I can reverse engineer it or patch it to my heart's content. Almost all of the shrinkwrap licenses say I can't, but the courts say those restrictions aren't enforceable. Note all this applies only to the single copy I bought. I can resell that *one* copy, no matter how I've modified it, but I can't make other copies and sell them, or even give them away. That would violate copyright, and would be piracy.

True licensing also exists. IBM practiced it with mainframe software, and a few other companies did too. One had to negotiate and sign an agreement, a contract, *prior* to tendering payment, to be allowed to use the software. This is a true licensing arrangement freely negotiated by both parties prior to the transaction, and the vendor retains ownership of the code, and responsibility for its behavior as well, during the period of the license. Where shrinkwrap licenses fail is that the terms are not fully disclosed until after the point of sale, and the vendor won't give a full refund after the shrinkwrap is opened, so the terms are not freely entered into by the buyer.

Now shareware falls in a special niche. It can be divided into two rough categories, crippleware and begware. Crippleware has some key functionality disabled, and the author expects someone possessing a copy of the program to pay the author for an authorizing code to restore that functionality. There is no legal liability to do so, however. People can do without the functionality, or they can patch or reverse engineer the code to restore the functionality themselves. Now I don't like crippleware, but it is the author's right and choice to distribute it that way. If I want the full functionality from the program, I'll pay.

Begware is fully functional, and depends solely on the charity of those possessing copies to send money to the author. There is no contractual obligation for anyone to pay for begware. It is strictly a matter of conscience on the part of a possessor of the shareware. The fact that a good number of people do pay for begware is rather remarkable. I like begware, and I send the requested donation to the author of begware that I like and use.

In both cases the code is freely given to people prior to any transfer of funds or any formal contract being drawn. Like the case of the shrinkwrap license, the only protection the code retains is copyright. And like a book, the possessor of the code can do with it as he likes under fair use, including patching or reverse engineering it. But unlike the case of the book, the shareware author has also given explicit permission for people to copy and redistribute his code at will. This is how shareware is distributed. So it is like a book which says "Xerox me" on the cover. It is impossible to pirate shareware because what could be called piracy in another context is in this case specifically authorized

by the shareware author.

(Redistributing an authorizing code issued by the author of crippleware would be piracy, though, because it was not freely distributed. You only bought one copy, and that's all you've got, one copy. You can resell that one copy, but you can't *make* copies of it for redistribution. It is *not* shareware.)

The thing that started this thread, the offer of a patch to remove the begware notice from a piece of begware, is not piracy. It might not be nice from the POV of the begware author, but it isn't piracy. It is perfectly legal for me to tear the author's bio out of a book I possess, or discard a publisher's ad tucked in the book. If someone wants to give me a tool to make that easier, he can do that too. I think this is harmful to the concept of shareware, but it isn't illegal.

On Wednesday morning, 22 January, around 7:47 a.m. EST (12:47 UTC), the Space Shuttle Atlantis (STS-81) is expected to touch down at the Kennedy Space Center. (If weather conditions don't allow, landing may be delayed for 90 minutes, still with KSC as the destination.) Assuming all goes as planned, about 25 minutes prior to landing, as it approaches the coast of British Columbia, the orbiter will experience sufficient atmospheric friction to create an ionized wake, a condition persisting for nearly fifteen minutes as the craft streaks like a meteor over the southern parts of Alberta and Saskatchewan, above central North Dakota and Minnesota, eventually passing almost directly over the heads of Chicagoans. This trajectory is nearly identical to the re-entry of STS-79, on 26 September last year.

DXers working VHF frequencies -- TV, FM, 2-meter, and 6-meter ham bands -- who reside within a thousand miles of all but the easternmost re-entry track will have a rare opportunity: the Shuttle-generated plasma trail may enhance reception of over-the-horizon signals, much like meteor scatter. Meteors, known to be just pea-gravel-sized flotsam colliding at high speed with Earth's atmosphere, create narrow ionized columns for a few seconds; in contrast, the near-airliner-sized Shuttle should cut a much larger plasma swath over an interval of minutes. Such temporary plasmas scatter very-high-frequency radio signals over the horizon, whereas normal reception is limited to line-of-site distances from the transmitter. Shuttle plasma effects may persist for as long as a few minutes.

DXers should tune to a known distant station in the general direction of the Shuttle's re-entry track -- that is, if you are south of the track, try for a northern station, on a locally unoccupied, interference-free frequency.

- Re-entry Time Line -

If the re-entry goes as planned, the time line is as follows:

Event Time UTC EST CST MST PST

Arrives British Columbia 12:23 7:23 6:23 5:23 4:23

Overflies Calgary, Alberta 12:26 7:26 6:26 5:26 4:26

Overflies Fargo, ND 12:29 7:29 6:29 5:29 4:29

Overflies Chicago, IL 12:32 7:32 6:32 5:32 4:32

Overflies Cincinnati, OH 12:33 7:33 6:33 5:33 4:33

KSC Touch down 12:47 7:47 6:47 5:47 4:47

More detailed predictions (containing "look angles" at best visibility
for various locales) are available at the end of the document found at:

http://shuttle.nasa.gov/sts-81/orbit/orbiter/sighting/sighting.html

Also, check out the groundtrack maps for both the primary and secondary
landing attempts at:

http://shuttle.nasa.gov/sts-81/landing/grtrack

Note that only observers west of Illinois will have a decent chance
at a visual sighting of the Shuttle, due to lessened interference from
sunlight/twilight. The sonic boom, however, may be noted by anyone
in the vicinity of the re-entry track; be aware that it occurs a few
minutes *after* the Shuttle's closest approach to your location.

- Last-Minute Sources of Information -

Weather conditions at Kennedy may cause last-minute postponement of
the landing. The following Web site provides weather status:

http://www.ksc.nasa.gov/weather/weather.html

Last-minute information about the Shuttle's re-entry/landing status
is available at:

http://shuttle.nasa.gov/

Also, last-minute schedule changes are usually reported on the hourly
national news (e.g., CBS Radio affiliate stations, CNN, etc.) and on
NASA TV.

I would be especially interested in receiving successful (or even un-
successful) reports of DX catches made possible by Shuttle plasma scatter.

Good luck!

Where have you been, man? The FCC used to have regulations about DC
input power, but those have been changed to output power. You can have
up to 1500 watts DC output from your transmitter now. :-)

The primary reason I hardly EVER use packet is because my 28.8 modem
far outperforms it. Why on earth would I want to use 1200 or 9600 and
SHARE it when I can get a dedicated connection? Anywhere I can find a
phone line (both analog and digital) I can use it.

> Ironically, the no-code Technician class license was created in part to

Piracy and Customer Satifaction:

Although software piracy is a problem, it does not EXCUSE any vendor for providing customer satisfaction. I have learned not to purchase anything without an option of a full refund if I'm not satisfied with a product.

I am sure that everyone else agrees that there is a lot of junk software out there and I for one will not take a gamble on any package because of the piracy problem. If your vendor cannot accept that, then perhaps some time needs to be spent on your part for finding a better vendor.

> like an outcast thing to be one. It just seems alot like racism.

It seems to me like a war between ignorance and knowledge. Those, who know the code, know what they are talking about. The fun of "getting through" on low power even (like I experienced it last weekend) and what other fun might be associated with the code. Have not experienced it in full myself, but some of my ham radio buddies back in Germany seemed to have kind of mystical experiences, chirping away while telling me what the other station just sent.

Those guys, who pejoratively talk of "beeping" obviously don't know, what they are talking about. You wont hear beeps from those who enjoy the code, it is more like chirps. Even me in this weekend's contest did not beep but chirp, though I sent the code out faster than I am capable of copying it. But as most stations were on SSB anyway, and responded on SSB, I must not have been too bad at it, as they usually got my part correct.. If I now only could copy CW at the speed I can send it ... *sigh*

Actually, there are several software companies that offer a money-back guarantee on their software if you don't like it. Microsoft, for one. Maybe not for every program they sell, but "Flight Simulator", for example, comes with a 30-day money back guarantee. I think some of the stuff that Symantec sells also comes with a money-back guarantee. It's printed *right on the box* if you look for it. Also, a *few, very few* retailers still give refunds on software if you request it. I think there's a chain called "Micro Center" or something close to that which offers refunds on software. However, most stores do not.

Just my observations. (No refund.)

I am considering a crank up tower for the QTH. It may be the best way
to get it past the local zoning (read XYL) committee.
I am considering an 72' unit and want some opinions Vs a free standing
one. I am open to either a standard triangle structure or the pole
type. I would like to hear experiences, opinions etc.
Any thoughts on manual Vs electric control. How hard is it to crank it
up ?
I will be stacking several medium sized 144 and 440 beams. Nothing
large. Main problem here is tree line (about 65') not elevation.
Any thoughts or comments would be appreciated.
Tnx es 73,

Hello fellow radio enthusiasts,

I've been an adult school teacher for a number of years - and I'm just starting to learn the code at 51 (years, that is) because I want an Amateur Radio License - Tech +. It's taken me two days to learn 50 % of the alphabet and I've devoted 12 hours to the learning process. Yes, that was a lot of time, but I NEED to learn information in big blocks of time - because that's the way I (individual, me, myself) learn best.

My point is this. Many of my adult school students thought they couldn't learn very well because of whatever reason some well-meaning educational system (or teacher) gave them.

Bull-shit!!! Most of the adults I work with have never been TAUGHT how to learn. Our eductional system is (for the most part) designed like an auto factory assembly line. Trouble is, we are all INDIVIDUALS, and learn in DIFFERENT ways. Our education system is basically designed to teach the "masses" in one particular way, and if you don't fit the system - well too bad! You must be stupid, or a problem learner, or something worse. And with the frustration that type of thinking brings - I'm surprised anyone learns anything. (And a lot don't. Just look at the school drop-out rate!)

There are successful teachers out there, but they have learned to get around the "system" and look for the BEST way to teach and motivate individual students.

I hate to see amateur radio throw the baby (code) out with the bath water, so to speak, on the argument that it can't be learned, obsolete, not necessary, etc.

So many things are being "dumbed down" today, it's nice to see some standards of learning being upheld.

IMHO - Gary

Well, very interesting. HF licensee numbers are declining.

Sure doesn't bode well for the future of our hobby.

But we'll cling to the CW requirement to the bitter end; I guess until all of the old guard, myself included, dies of old age.

I sure hope amateur radio as we know it exists when the above occurs. There may be nothing to save by then.

Some folks on this newsgroup have stated that they don't think that HF ham radio is endangered by our lack of numbers and our declining numbers. Instead, they point to the possibility that we may soon get more HF bandwidth.

However, this is erroneous and deceptive. Our lack of numbers has already had terrible effects on the hobby. For example, back in the 1950s, TVI was a problem. As usual, it was usually not the hams' fault when TVI occurred; crummy TV filtering was the problem. Because there were enough hams to make this a reasonable common problem, TV manufacturers quickly moved to build better filtered TV sets. This and CATV has eliminated TVI as a problem. But we have newer and worse ones. Today, many consumer devices are unfiltered. Because there are so few hams, it is not cost-effective for them to spend the extra $.02 or so for the necessary capacitor or RF choke. Thus, it becomes the hams' problem when he is surrounded by neighbors whose telephones, smoke alarms, etc. are triggered by normal HF operations.

Ditto zoning laws affecting antennas. Restrictive CC&Rs and zoning rules would be much less common if there were more HF hams.

Young people today are disciplined and smart. They have computer skills that put 99.9% of the old timer CW hams to shame. They don't learn CW not because they lack a work ethic, but because they view Morse Code as a silly waste of their time. So they never get bitten by the HF bug, and they are lost to our hobby. The statistics prove it. But I guess we hams will keep arguing about this right up to the time that our hobby's HF component disappears.

It's tragic.

Now I know why I gave up on amateur radio and took up flying.
Don't meet people like this "in" the air and the radio work
is totally professional. Got to the point I was extremely
embarassed to let people listen to those people that passed a
code test talk on the radio. With attitudes like that displayed
below, amateur radio does not have a very promising future.
Seems to me once folks get a license they somehow believe it
gives them the right to do and say anything. Gee, wern't
we here in the '70s with CB. Face it, the FCC will not police
the amateur bands. They don't have and won't have the money.
What they will do if the bands continue to deterioate is
the same as they did with CB...let everybody in and write
it of as lost RF spectrum.

Hello all, I have a GE Master II repeater for sale.
It has the following:

Scom 7k repeater controller (top of the line)
Phelps Dodge 6 cavity Duplexers
70 Watt GE Master II w/ hamtronics preamp.
Doug Hall Remote Base Interface (RBI-1)
Keeping the kenwood radio

This does not include the antenna, hardline, or power supply.

The reason I am selling is because I also have a 2 meter repeater and we are expecting a baby at anytime. I had to get rid of one of them, and I have too much in the 2 meter machine right now. I have to think of the family at this time.

Asking price is $1,200 neg. please contact me via email first. Then if interested I will gove you my private number. Corey N3GZW

PS this repater is currently on 442.700/447.700 MHZ.

Have manuals for the Doug Hall remote and the SCOM controller.

>I can't believe you clowns. Here you are, defending theft.

Some of us don't believe software piracy is theft in the traditional sense. In order for something to be stolen, one party must suffer a loss. It's unclear whether or not this happens in many cases of software piracy. I'm not saying that piracy is morally acceptable - that is for each person to decide for themselves. But it's not traditional theft. That's why there's a different name for it, piracy. Some people feel that some forms of piracy actually help the industry, by advertising the products and allowing "try before you buy." It's not a clear-cut issue.

>>Not true for most software, especially shrinkwrap. Once its
>>opened you can't return it. In any case, I stand by my comments above
>>also as to ownership and licenses.

>Of course you do. You're wrong, but go ahead.

Perhaps you can provide some case law to sustain
your opinion.

This issue has been beat to death in misc.legal.computing and
there has yet to be any case law to establish the claims you
make...i.e. that software is
leased and not owned when sold in over the counter
retail stores and/or via mail-order.

>>Nothing wrong with being honest, but it works both ways too.

>Honest???? You call what you do HONEST??

Just what have I done that you consider to be dishonest?
I didn't post the original comments. I only posted
the most recent comments to which now you have
replied. If my comments are dishonest I must confess
total ignorance to what you may be basing your

opinion on.

>I can't believe you clowns. Here you are, defending theft. But let someone
>just *think* about operating a ham radio without a license and you would be
>sreaming bloody murder. By the way - you may think that the ham license with
>your call on it is yours - it's not. It belongs to the government, which can
>revoke its use at any time. You're a bunch of hypocrites.

Where have I defended theft? Please, be specific.
As to my license, and call, just who claimed it couldn't be revoked?
What's your point to even mentioning it.

>Read the packages, folks. You don't own the software. If you want to whine
>about it, then whine about it on the airwaves and keep the crap out of the
>newsgroup.

Learn something about the law. You can't enforce a contract (i.e.
license) after the purchase. As above, just provide us with one
case law cite to substantiate your claim.

>Bill, I hope you don't instill your crap to your students. If you don't even
>bother to read the shrinkwrapped notices, I really question whether you are
>qualified to teach anyone anything.

Again...shrinkwrap licenses are not enforceable. If they were, you'd
have seen it done already.

>Of course it's piracy. What have you got? A dictionary with some of the
>definitions you don't like substitued with those you dream up???

Nothing I have written here condones actual piracy. It is in your
mind that you seem to think that.

I'm a cheater tech right now, and I'll be taking the upgrade exam in a few weeks-hopefully to Advanced.

I was wondering, does anybody know any good mnemonics for any of the stuff on the Element 3 or 4A exams? Other pointers? Tricks that worked for you? (Aside from getting a good night's sleep before and not taking the test wired up on coffee, that is.)

If this works, I'll be beeping at y'all presently. (Call me a freak-I kinda like the code, even if it is a bear to learn.)

Don,

Consider kids are in the time of their life when the linguistic part of
their brains are still developing naturally a new sound pattern
recognition (language) come easily to them. It is not so easy for adult
and it varies greatly from individual to individual. Note that most of
the folks who go on here about how easly it is to learn code learned it
easily. That means THEY learned it easily not that everyone can. Those
of use who struggled to learn code find it demeaning and insulting to
hear "how easy it is" it wasn't for me and many others some of whom
never will make it. My $0.02 worth

Source record: 206710

Use the cheapest AM portable radio you can find. Tune it to an unused frequency, where you just get the most "noise".. then, use your body as a shield. Twist, twist twist.. then SHOUT.. when you get the culprit. Alternate .. THE BEST AM portable radio you have, with S Meter, .. w/ external antenna connection..use a 2 inch wire.

Seriously, this will work in some instances .. this method also works on 2m when someone inadvertently keys their xmtr.. your body is a great RF shield! You can use an HT w/ SMeter, like RadShk, to zero it in pretty darn good .. I have done so more than once! .. `course, I'm kinda BIG GUY - lots of shielding .. .. but have found unknown key down rigs over 8 miles away within an hour!

Back to your thing .. use your body as a shield, so you can tell generally where the noise is being generated.. the cheaper the portable AM receiver, the better this will work! Hold the radio CLOSE to your chest, then .. slowly spin and see when the noise increases .. VOILA! You will probably find that this is from a touch on/off lamp, or .. a dimmer switch, .. or .. welder, etc..... not "line noise" .. but caused by a nice new consumer whiz bang cheapo doo..dahh... If you find it to be near a power pole, hit the pole with a baseball bat, while listening to your cheapo AM receiver. If that is where the problem lies, you will hear a "ringing" when you bang the pole. This "cause" can be "increased in volume" by the fact that people get home after 5 PM . and start "cooking" .. causing your power company's hardware to be stressed., showing up its "short"comings. Depending on your power company's personnel, you can probably solve this within a couple of days! Hope this help! .. At least, starts you in a direction!

Hi Bill - Think of it as buying a book. You own the book, but you're not free to reproduce the contents in any manner without permission from the author ("fair use" aside).

Another example would be purchasing a video taped movie; you own the tape but just try making copies and then distributing them!

This topic really has nothing to do with ham radio. ("But my computer runs my radio!" some will say, and I'll respond that my home houses my radio but I don't discuss carpentry on here.)

True! It often takes hundreds of hours to write, test and debug a program. Considering the limited sales potential of amateur related software, especially terminal programs and such, and the price most shareware authors are asking for registration, they are probably getting paid 25 to 50 cents and hour for their time - and some want to steal even that from them. If they charged "fair market value" for their time you'd probably pay upwards of $1000 a copy for a terminal program!

Most shareware authors will never get rich writting amateur radio related software. Registration at least permits the author to recoupe something for his time and effort and makes him feel the user's support and appreciate his efforts.

1619. ! RETURNED YAESU 8000 ---WARNING

Newsgroup: rec.radio.amateur.misc

Source record: 206515

I had the latest version of the Yaesu FT-8000 and it was really bad. I live in New Jersey, about 15 miles west of New York City.

Like every one else I go out every year and buy the new piece on the block. But a lot of times I get ripped off.

Maybe amateurs should sue the manufacturers like AOL is getting. Then we will get things fixed. I called Yaesu, but got the same old excuse,'not in amater band can't do anything'. but what about in band? My scanner from radio shack does better and they DO HAVE A GUARANTEE!!

I have a Yaesu FT-50 and have no problem.
I have a Kenwood TM 742 and have no problem.

118-136mhz am wiped out, even at airport!!!
144-148mhz flock of birdies, bad intermod
440-450mhz bad intermod, birdies,EVEN GOT FM RADIO STATION AT 450.000mhz!!!!
800-900mhz ok reception, cellular blocked
1100-1300mhz cellular images DFQ, wipes out 1200mhz amateur.

The audio is really low, my FT50 has louder audio.
It's a shame because the package is put together nice. My only other complaint is no direct frequency entry.

Can anyone who has experience with different radios recommend a radio that:

receive 144-148 and 440-450 with no intermod?
receive 118-136am so I can at least hear someting?
receive 440-471 so I can listen without intermod?

Please reply if you can recommend a good radio.

Thanks for listening,

Mike

>are not fully disclosed until after the point of sale, and the
>vendor won't give a full refund after the shrinkwrap is opened,
>so the terms are not freely entered into by the buyer.

Although I tend to agree with Gary's sentiments, a couple of clarifications are needed:

A case recently *did* uphold the validity of shrinkwrap licenses. (_ProCD_v._Zeidenberg_, 7th Circuit, 1996 -- don't have the full cite handy).

This decision also held, in a brief and unnecessary discussion that is almost certainly dicta rather than precedent, that limitations on reverse

engineering in a shrinkwrap license are enforceable.

Trying to be objective (not always easy for me...), the ProCD case is probably correct on the overall enforceability of a shrinkwrap license, but goes too far in allowing restrictions on reverse engineering to be enforceable.

Unfortunately, the 7th circuit is well-respected, as is the judge who wrote the decision, so ProCD is likely to be causing trouble for a while.

You also need to be careful when talking about rentals in the context of software. There's a statute called the Software Rental Act that basically outlaws rental of software (except for some very limited exceptions for libraries, etc.) and raises some questions about to what extent the "first sale doctrine" (that allows you to resell a book) applies to computer software.

Hi Mike,

The basic rule of QSL card exchanges is "Reply to each one
you receive".

If you have no big interest in collecting cards, the above is probably
the only rule you need.

1624. re.nocode hf solution

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-22 00:00:00 UTC
From: ken cubilo <kcubilo@freeway.net>
Message-ID: <32E60C78.25C3@freeway.net>
Source record: 206520

Well will you guys quit e-mailing me your sob's and tears. come on
i make a simple suggestion for you guys who what to just lay around and
milk the system and this is thanks i get.look we dont need no code
support on the hf bands, and just because some portions of goverment
no longer use morse code that doesnt entitle you to get a hf ticket
without working for it.I dont think myself or my so called cronies will
ever side with you guys, you see your idea's may come to pass only
because of the greed in the system lots of organizations and companies
would love to see your dreams come true just for the fact that they can
put a few extra bucks in their ass pockets at the expense of ham radio.
perhaps all your complaining will force the system to go back to the
old way, stiff cw requirements and a exam that you dont get the answers
to ahead of time, how many of you ever drove 500 miles round trip only
to fail the cw or theory portion of the exam,of course in them days
most of us had a drive to get something done. so if you dont want to
move to xe or ct land then go get on 11 meters thats hf....or sit down
and learn the code hey 4 and 5 year olds do it everyday!!!

one final question, how many of your supporters have a commercial
interest in the so called dream licensing plans?

I've installed radios, both commercial and amateur, from 3 mhz to 500 mhz, from 5 watts to 100 watts, in Ford, GM, Pontiac, and Mazda vehicles, and never had a problem. Make a good, clean installation, ground everything, and make a permanent antenna installation (avoid mag-mounts and such). Don't be afraid to drill a hole! If you keep the vehicle to 75,000 or so, an antenna mount isn't going to effect the trade-in value much, if at all.

1626. ARLB003 ARRL Board Meets

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-22 00:00:00 UTC
From: w1aw@arrl.org

SB QST @ ARL $ARLB003
ARLB003 ARRL Board Meets

ZCZC AG03
QST de W1AW
ARRL Bulletin 3 ARLB003
From ARRL Headquarters
Newington CT January 22, 1997
To all radio amateurs

SB QST ARL ARLB003
ARLB003 ARRL Board Meets

The ARRL Board of Directors met in annual session, January 17 and 18, 1997, at Albuquerque, New Mexico. Here is a summary of the meeting highlights:

Responding to survey results that show that the majority of members favor retention of Morse code for HF operating privileges as an international treaty obligation, the Board decided that the ARRL will not support changing the existing treaty requirement, an issue on the WRC-99 agenda. The Board also accepted other committee recommendations regarding the international rules that govern the amateur and amateur-satellite services.

A committee proposal for modifications to the FCC amateur licensing structure is to be published shortly in QST. Members will be invited to comment to their Directors before May 31, 1997. The Board will not take action on the committee recommendations earlier than the July meeting of the Board, to afford members an opportunity for discussion and comment.

Noting the increasing number of participants in the spectrum management process, the Board created the ARRL Spectrum Forum, an electronic mail roundtable for national amateur organizations, as well as regional entities and interests. The ARRL Spectrum Committee was dissolved with the thanks of the Board.

Dr. Robert C. Smithwick, W6JZU, and Mr. Ken Kirk-Bayley, GJ0KKB, co-founders of MediShare International, a program of the Medical Amateur Radio Council, won the ARRL International Humanitarian Award for 1996.

James Jacobs, K1GHT, was tabbed for the ARRL Certificate of Merit in recognition of his lifetime of humanitarian service and goodwill through Amateur Radio. Michael Pilotti, N3IRZ, also won an ARRL

Certificate of Merit in recognition of his arranging for the travel of Ukraine radio amateur Nick Bortnick, UX0ZZ, to the US for special medical assistance.

The League's Executive Committee was tasked with studying the adequacy of FCC rules governing the qualifications of Volunteer Examiners, particularly with respect to those VEs who have obtained license upgrades by means of Morse code element credit waiver provisions. The Executive Committee was also tasked with investigating the extent of abuses of the Morse code exam waiver provisions for applicants with severe handicaps, and recommend any regulatory changes deemed necessary.

The Membership Services Committee was directed to study ways to better serve the digital community.

Atlantic Division Director Kay Craigie, WT3P, Northwestern Division Director Mary Lou Brown, NM7N, Southeastern Division Director Frank Butler, W4RH, and Southwestern Division Director Fried Heyn, WA6WZO, were elected to the Executive Committee.

Roger Franke, K9AYK, Tom Comstock, N5TC, and Tom Frenaye, K1KI, were re-elected to the ARRL Foundation Board of Directors.

ARRL will establish an Alternative Dispute Resolution service for the use of individual amateurs, amateur organizations, citizens, organizations and others having disputes over Amateur Radio related subjects.

Full details will appear in March QST.

Scott,

I have owned 2 of them. I sold one last year. They work great and have all of the features I would need to use on a regular basis. The 30mW "Economy Low" power output comes in handy too when chatting localy, saves battery power and is better suited to comply with "minimum amount of power necessary" rule.. hehehehe

The only problem I have had with them is the display. I accidently dropped one and it landed, you guessed it, right on the display. The replacement part cost over $100 with shipping and all, but was rather easy to install. Otherwise, they have been really good rigs.

The squelch control is accessed by the menu system, which to some people that might be a bit of a drag, but I have had no problems using it. Crossband-repeating does not require turning the radio off and on, it's a simple 2 key command..

I'm not sure about the other radio you mentioned, but another handy little feature (used millions of times by myself) is the ability to lock the display light on. The keypad does not light up, but the display does. I have had other rigs that you either had to hold the lamp button in or the lamp would simply shutoff after a pre-specified length of time. Even if you turn the rig off and back on, the lamp will still be toggled on, so you don't have to turn the lamp back on again..

One other neat feature I take for granted is the activity lights on the top of the radio. There are 2 multi colored LEDs on top of the rig near the control knobs, one for each band. They are off when not in use, green when receiving and red when transmitting. When talking into the radio, you can see at a glance what the radio is doing.

Modification of this unit requires a very steady hand though. There are very tiny SMT diodes that heat up real fast and can be destroyed if your not carefull. The MODs rolling around the net are not very accurate since there are two versions of the TH-79 (79 and 79A). But, it can be modified easily enough, if that's what you decide to do.

The 79 was the first one in production, but there were complaints that the unit did not provide for a memory "lock-out" function, so they re-worked the keypad and the CPU and called it the 79A. Therefore, the mod does not cover the same RF territory as the MOD describes. The antenna is different from the 79 to the 79A as well, in that the 79

has a shorter, more stubby look to it. The 79A comes with a longer, sleek looking duck. When the 79 came out, the tone decoder was an option, with the 79A it came standard and is visible through the little black plastic cover on the right side of the radio (away from the PTT).. If you buy one used, make sure the tone unit is there.

If you get the 79(A), get the high power battery (costs less in the long run, and get the appropriate HT sheath (cover) for it. There are different size covers for the different length battery packs.

If you need any other information, feel free to email me.

Who says we don't put energy into recruiting new hams. I have encouraged 5 of my co-workers to get into ham radio in the last few years. One is now a novice, 3 are tech-plus', and one has an advanced license. The biggest issue I find with getting people into the hobby is not the code, but conflicts with school or with family activities.

Exactly the point I was trying to make. I don't condone theft. But to
claim there is a _loss_ in the case I cited is clearly stretching a
point. It may not be right, but there isn't a loss to the software
author because he wouldn't have sold that person a copy of his program
anyway. And no, I don't believe Photoshop would be 50 dollars a time
if we wiped out piracy tomorrow. Or even 100.

Hi there,

Some year or so back I pulled an article off packet (I think from
OH9MV@OH9RBA.FIN.EU)
It was a little program called x-temp, using the SMT 160-30,
a sensor with a built in A/D convertor. This is connected directly to
the
par. port.

Specifications were givin as: input v = 4.7 - 7.0 v (typical 5v)
current consumption =
<200uA
Range = -30c to =130c
o/p freq = 1-4 kHz

Problem is, I have not been able to find any reference to this
device,
neither do any dealers/importers know of it. I sent a message to
OH9MV on
packet but never received a reply and now I am not qrv on packet
anymore
either. In the article the heading is SMT 160-30 however all
through the
rest of it he talks about SMT160-30, I have not been able to locate
it with
net searches whichever way I spell it. Please if you know of it or
any
similar device which will operate over the same program (x-temp) give
me a
shout or reply to this newsgroup.

Thanks

i fly gas balloons in competition in the US and in europe. we normally use aircraft band handheld built by ICOM. this are 5 watt units and work quite well in the US. however, when we fly in europe in long distance races and need to contact ATCs for permission to fly into a countries airspace we are often unable to make contact with the countries ATC center to get permission. normally the center is several hundred kilometers from the border crossing point and the 5 watts doesn't hack it.

is it permissible to use an amplifier to boost power to 20-40 watts in order to up the possibility of talking to these centers? the aircraft band is approximately 115mhz to 135mhz. what is the law on this and what is the maximum permissable power? not getting permission can be dangerous to your health - big time.

if this is an inappropriate newsgroup for this query, please advise me as to where i might post and get some help. since this is a specific question please reply to my .sig address.

TIA

That's a completely bogus claim. No law prohibits accepting a return on software (and, in fact, a number of laws that require a product be of suitable quality for sale actually require it.) What the laws do require is that a product (not just software) accepted back by a retailer not be resold AS NEW. Many stores completely disregard this regulation and resell the returned product (many even go to great lengths to point out that they are going to do it, WalMart was very clear on that recently with me when they checked all the paperwork that came with a camera saying they needed it to resell the camera [it was all there]). There certainly is no law that keeps a store from accepting a return and sending the product back to the manufacturer for credit; they just don't want to do it.

Isn't "Flight Simulator" $40 software? To return that, I'd have to ship
it to MS, as well as make a toll call to work it out with them. 99% of
the time I buy from a retailer, and they don't take refunds. In addition,
many software vendors will void their warranties and policies if you
purchase it through a 3rd party.

That's because most stores are required by law to not accept refunds for
opened software.

Well, I might be able to help you with that. Make sure you have your
EMS memory manager installed in config.sys, and make sure it isn't set
for NO EMS (that's the default way it'll be with Windows). Just delete
the NO EMS from the line and reboot.

> the use of 6m (and in the UK 4m).

No, Gold is incorrect. Quoting from Appendix I of the General Conditions for
the issue of "CEPT Radio Amateur Licences"

"2. LICENCE CLASSES

...

Class 2
This class permits utilization of all frequency band allocation to the
Amateur Service and Amateur Satellite Service above 30 MHz and authorized in
the coutnry where the amateur station is to be operated."

>
> The other bug is that visitors operating under CEPT must still abide
> by their home license privileges (except for restrictions on
> territory of operation) and do not get the full privileges of a
> reciprocal license.

Once more, Gold is incorrect. In accordance with the CEPT
Recommendations, the visiting amateur is not bound by the home regulations,
but by those in the country that the amateur is visiting. Quoting from the
same document I referred to above:

"3. CONDITIONS OF UTILIZATION

....

3.4 The licence holder shall observe the provisions of the ITU Radio Regulations, this Recommendation and the regulations in force in the country visitied. Furthermore, any restrictions concerning national and local conditions of a technical nature or regarding the public authorities must be respected. Special attetnion should be apid to the difference in frequency allocation to the radio amatuer services in the three ITU Regions.

> BTW, the FCC reciprocal permit works the same

Would Gold be kind enough to give us some proof to the assertion that the CEPT licence would be a poor alternative? Although I stand to be corrected, I doubt that Gold would be unable to substantiate this viewpoint.

In the US you cannot do it. Unless someone markets a type accepted external amp that I don't know about. You wouldn't be able to install it yourself unless you hold a GROL. (legally).

I cannot address the regs for other countries. It sounds like a good question for rec.aviation, rec.aviation.misc or maybe even better, rec.aviation.products. The are a fair number of european aviators in those groups that may be more informed.

If you do decide an amp is in order for use outside the U.S., use caution should you deide to buy a VHF amateur amp to save some money. Many VHF ham amps are designed for FM and are not linear. AM aircraft comms require linear amps.

In the US an aircraft station can run 55 watts max on VHF. But I believe most general aviation aircraft run radios that operate at less than half that power.

Since you will need an increased power source (batteries) for an amp (compared to what is required for your ICOM) you might want to forget about the amp and go with a regular radio. You might find the cost of a simple 10 watt VHF radio to be as cost effecetive as a legal amp. Or consider a higher performance, external antenna.

Regards

We checked out the W5YI data before we ran the story. (We never run anything that we do not double source.) The trend the past 4 years in General, Advanced and Extra is -- unfortunately -- downward. The trend in no-code Tech, while still climbing, is not what it was a year ago. We are doing a follow-up in our next newcast that traces where hams are going rather than upgrading. Ill give you a hint -- we are using it right now.

None of this is surprising. The codeless tech is the entry-level license
of choice. It was created for people who do not want to get on HF.
There should be no surprise that people in that category are seeing
growth, while higher licenses classes see less growth.

Unfortunately Jeff, the two are not equal.

Software (at least a bootlegged copy) is an intangible item.

The Porsche in your example is a tangible item. By my "theft" of it,
I deprive you of your ability to use it.

The same is not true of the bootlegged software. By bootlegging it,
you do not deprive someone else from using it.

Akin to your example, if I see your Porsche and decide I like it and
want to use it, and thus make my own copy, deprive you of yours?

Not that this makes the behaviour correct, mind you, but comparisons
to tangible property examples are simply not appropriate.

Wow! This is great! There a lots of things I can't afford! Gonna go grab some of that right now. And maybe if I scrimped and saved I *could* afford it, but as long as the line is not clear cut, I may as well bend the rules a little bit.

"Not being able to afford it" is my ticket to riches!

I find that far and away the biggest obstacle to recruiting new members into our hobby is the Morse Code. Simple as that.

As Newsline sadly explained the other day, our hobby is dying. The old guard will continue to insist upon retaining the anachronistic Morse Code requirement. I guess until they all die of old age. Of course, our hobby may not be around by then.

SSB already sounds like an old folks home. This month's guest Op-ed piece in QST said it all: the major topic of discussion on SSB is people's deteriorating medical condition. How bad does it have to get before we recognize that we either open up our hobby to newcomers or we lose it?

It is just tragic.

The saddest part is the way the old Morse Code crowd feels free to say awful thing's about our country's young people. It is discouraging to continually run across such nonsense here on the internet. In reality, today's youth are a helluva lot smarter than we were: their knowledge of computers, on average, is simply awesome. I've met many 13 year-olds who knew computers well enough to work in industry. (I wonder how many fiftysomething breadwinners have been helped out with computer problems by their kids. A lot, I'll bet). These are smart, savvy young people we are failing to attract. It is our fault, not theirs, that our crazed adherence to a 19th century communication mode is turning them away from our hobby.

Should that poor student borrow your car just because he wants
transportation? This half baked rationalization is what is costing
everyone more because the software vendors must take into account all of
the thieves.

The same folks who argue that piracy is not stealing are the same who
believe that porn does not exploit and cheating on taxes does not hurt
anyone. You most likely apply the same bs logic to your job and then can't
understand why business isn't great.

Ray,

This may be redundant if you have already read my last post to you, but my buddy Steve, W2ZR, spoke to the FCC today and they advised that their original estimate of March 1st to fix the problem was wrong. Now they are saying that they should resume issuing vanity calls around February 1st. I hope this they are correct and can resume issuing new vanity calls on February 1st.

Not so, Jim ... most of us no-code-test-advocates would be willing to see a
more
meaningful technical test ... and retesting of beepers like you to weed out
the
incompetents ...

We don't believe that the theory tests are the barrier to increasing our
numbers,
we believe that outdated "requirements" like Morse testing are the barrier,
in both
practical and esthetic terms.

UPDATED 1/16/97

Lab collection of tubes, all of which should be considered
USED unless otherwise marked. All are guaranteed to be
within normal test limits when shipped. All tubes are
either American made or made by Amperex, Mullard, Siemens, or
Telefunken. TUBES ARE NOT SORTED BY MANUFACTURER, AND SORTING
BY MANUFACTURER IS NOT AVAILABLE. (Please don't ask!) All
items subject to prior sale. When they are sold, they are
gone forever; there will be no restocking.

The case was well publicised and is on the public record. There
were several county hearings and in the county hearing the complainent
made the statement about the "Rural" experience. The county got
bogged down in the usual buracracy, then the complainent entered
a law suit. There is no point in getting into all the gritty details as it
is
history now. I can E-Mail you name of the principals in you INSIST, but
these
folks have had enough grief and expense. Not everyone in this world has an
extra $100,000 to fitter away playing in the court system. Maybe you have
and
I would encourage you to expend all your funds chaseing windmills. The
lawyers need the work.
Cliff, W7VVA

Our society is full of mini-fascists who are getting their way. I am not a smoker but still object to the non-smoker in a condominium complex who obtained a court order to stop a neighbor from smoking in his own apartment (poor ventilation). Rather than work to correct the ventilation, the path of least resistance, and I suppose to advance a personal agenda, was to revoke the neighbor's rights. Many will say that, in this case, the end justifies the means. That they do fails to surprise me anymore. I agree with Bill's opinions but tend to believe the story.

Dan

Date: 1997-01-22 00:00:00 UTC
From: newsline@ix.netcom.com
Message-ID: <5c4mqp$ofp@sjx-ixn3.ix.netcom.com>
Source record: 206585

As I was driving home from work tonight (1/21) I tuned into "Coast to Coast AM" with Art Bell (W6OBB). Bell announced that his guest on Wed night (1/22) through Thrusday morning (1/23) will be 73 Magazine publisher WAyne Green, W2NSD. It was also noted that any of us can call in and ask Wayne questions.

Here in Los Angeles, Art Bell's show is carried on KABC (790) at midnight. San Diego station KFMB (760) takes it from its start at 11 PM.

To find out which station in your area will have Wayne with Art, try checking the station list at www.artbell.com

Green is ultra "no-code." It will be interesting to hear what -- if anything -- he has to say about the recommendation of the ARRL WRC '99 Committee to retain Morse testing. It might make an interesting topic for us here. Maybe not.

Well, you're selling yourself short. The antenna and surroundings should
be configured to present a "natural harmony" Z to the transmitter
feedline. This can be accomplished variously, and some perusing through
material on High Power Exterior Decorating would show you which colors
are most efficient with other colors.

Howard.

well I figgured the answer was simple. wrapping one turn of insulated wire
around the plate lead of the driver tube and fed into the Radio Shack freq
counter works great. All I have to do is switch to CW tune and there is my
frequency. Thanks to all who responded.

The "other" problem is that Win95 still seems to "own" the
soundcard when you are in a "DOS" box. The program does not like
that. You will get an "interrupt" error or similar.

Make sure himem.sys is loaded in your config.sys and "emm386.exe
auto" is in your dosstart.bat. Exit windows with the "restart
computer in dos mode" menu. You will then drop right into DOS.

I have had good success with it. It works! I got a perfect copy
tonight using a DX-440.

Pentium 120
S3 Vision 330 PCI 2MB
Soundblaster 16 value PNP
64 Megs RAM
Running Win95's stock EMM386.exe and himem.sys

640x680 and 600x800 worked fine, 1024x768 seemed to revert back
to VGA.

Unless you have a "magic" soundcard, you will probably have to
tweak the <esc>/Settings/Demodulator/Clock-cal setting.

Type <ESC> S D C

At first, I got a screen-full of scrambled lines. Totally out of
sync. Slowly decrementing the value, I got it to "straighten
out". It straightens out all the stored data, too. So the whole

image should "snap" into place.

My final clock-cal setting was 0.98698. You may need to step in increments as little as 0.0001 to "zero" it in.

Good Luck!

Cheers,

What is even more nifty is to use the newer communications techiques,
like pactor and clover, that allow you to chat with others when the
signals can't even be heard.

> Those guys, who pejoratively talk of "beeping" obviously don't know, what

I would suggest that Rambaum take a survery of those who comment in
favour of abolishing Morse code testing, and discover that his
prejudicial viewpoint is baseless.

>U.S. amateur station to operate on the spectrum my license covers.

You don't mention one very important factor, what radio are you using?
It is quite common for the majority of reported "splatter" to be
in your own receiver. The difference in receiver front ends can be
huge when it comes to operating successfully near a high power station.
It isn't uncommon for another nearby amateur operating the same band
with you, and who is running high power, to be accused of splatter
when in fact his signal is clean and your receiver is generating the
products you're hearing.

Now these guys may be operating dirty, but before you get carried away
with that thought, make sure it really is their problem and not yours.
You may discover that you can solve the problem in your own receiver
and thus avoid confronting these other operators. A quick way to check
if your receiver is contributing to the probem is to switch in an
attenuator. If you switch in 6 db and the "splatter" drops by *more*
than 6 db, your receiver is generating at least part of it, and you
need to take steps to clean up your receiver.

As you note, the FCC has little interest in doing anything about high power CB operation, and not much interest in doing anything about CBers sliding a bit outside their bands either. So the chance of getting these guys shutdown is probably small. If they are operating dirty, not just out of band and with high power but actually misadjusted, you *may* be able to "help" them if you approach them properly.

I've been able to do this on one occasion. A neighbor two blocks away was running high power on CB and giving me fits because his rig was misadjusted. I paid him a friendly visit and offered to help him adjust it properly. Once that was done, he had more success operating, I had much less interference on 10m, and the TVI complaints *I* was getting from other neighbors dropped dramatically.

It isn't an ideal solution, but it may be the only practical solution you'll be able to find. (Note: at the time there was an operational FCC monitoring station nearby, and I was on a first name basis with the FCC EIC for the region, but I couldn't get them to act. They told me bluntly that they had higher priority things to do and to solve the problem myself. So I did, and without making an enemy too.)

Jim Kelly, KK3K (skeptic@netaxs.com)

LAMBDA AMATEUR RADIO CLUB CO-SPONSORS ARRL AWARD

==========

The Lambda Amateur Radio Club (LARC), a club for gay, lesbian, bisexual, and transgendered radio, electronics and computer enthusiasts and their friends, will co-sponsor the American Radio Relay League's (ARRL) Excellence in Recruiting Award for 1997 as a part of the club's ongoing public service effort.

Details of the award were announced in an issue of the ARRL Letter in November, and an ARRL Bulletin issued in December announced the LARC co-sponsorship of the award. LARC co-sponsorship has been acknowledged in ARRL bulletin ARLB090, and the club name will be inscribed on the plaque awarded to the winner of the award.

The Lambda Amateur Radio Club (LARC)

LARC welcomes new members. There are no special requirements for membership other than an interest in radio, electronics or computers and a supportive attitude toward members of the sexual minority community. LARC publishes a monthly newsletter, sponsors local get-togethers at computerfests and hamfests, and organizes DXpeditions.

LARC is a public-service-oriented club which proudly affirms the sexual minority status of the majority of its members. LARC works publicly and visably for the benefit of all amateurs by promoting fairness, acceptance, and good will in ham radio especially on behalf of members of the sexual minority community.

FOR LARC MEMBERSHIP INFORMATION, visit our web sites:

http://www.netaxs.com/people/skeptic/larc/

Piracy doesn't affect the support a software maker gives. This is
nothing
but an excuse to steal.
I don't know of any software makers who don't offer a money-back
guarantee.
While some *vendors* may not give your money back, if you contact the
maker with a problem, they will give your money back.

Those who feel a "try before you buy" deal is best, this is what
shareware
is about.
If shareware isn't your cup of tea, join a user group. The members will
have tried almost all applications, and can help you make a decision.

Piracy is theft. It raises the cost of software for those of us who
don't steal. It steals the work of many people.
There's no excuse for it at all.
To defend it is like defending rape. It only makes you look stupid.

Bill

Stretch this a bit further and you are saying if the same poverty
stricken student steals a Mercedes Benz, Mercedes didn't lose anything,
as he never would have bought one anyway... Let him keep it...
Theft is still theft. If you can't afford it, you can't afford it. It
doesn't mean it's OK to steal things you can't afford.

Later,
Dave

'Way back before WWII and coax the use of the old cotton covered lamp cord,
like was hung from the ceiling with one lamp socket on the end of it, was
used
to feed antennas. To be really effective it was boiled in paraffin to
improve it
use outdoors and it's RF handling capabilities. It was a good idea at the
time
but today with all the alternatives we have, it seems like not such a good
idea.

Try putting a sizable ground from ambulance body to the rack that
holds the receiver/exciter and expecially the pa/coupler. Without
the ground on the pa/coupler rack there will be no output.

>the thieves.

This is where things become non-traditional. If someone steals your
car for a joy-ride, you suffer a loss, but if they make a *copy* of
your car and drive off in that, you don't suffer a loss. Now the
auto manufacturer might try to claim a loss, since he didn't get to
sell another vehicle, but as noted above, the poor student couldn't
have bought the new vehicle anyway. The only real loss may be to
Nike because the student won't have to walk everywhere and won't need
a new pair of shoes quite so quickly.

Now that doesn't mean it isn't stealing, it is, but what it means
is the claims by the software houses that they are losing large
amounts of revenue are based on the bogus idea that they've lost
a sale. They haven't, because there was never a possibility for
a sale in the first place. The student had a choice of ripping off
Photoshop or buying a #2 lead pencil and a sketch pad.

The common claim is that if it weren't for piracy, software vendors
would lower their prices dramatically. If you believe that, I have
a bridge I'd like to show you. Mercedes could sell a lot more cars
if they lowered the price (and there's enough margin that they could

do that), but you don't see them doing that. They are skimming off the cream of the market and ignoring the dregs. Most of the big ticket software being ripped off is doing the same thing. Piracy, as long as it doesn't cut into their lucrative cream skimming, is irrelevant to them (that's why software vendors get real upset at corporate piracy, because that threatens their cream market, but don't much care if some hacker rips off a copy of their software to play with at home). It is claimed by some that certain software vendors actually want some piracy because it helps them consolidate their dominance in their market niche by leaving no niche for lower priced competitors.

Now this latter is a real downside to piracy. Piracy tends to harm, not the company whose software is being ripped off, but the second tier company who might consider offering a lower cost product to sop up the bottom of the market, IE Ford Escorts can be sold because lots of people can't afford a Mercedes. If people could just copy the Mercedes, Escort sales would disappear. What you would *not* see is a lowering of the price of the Mercedes. That's a high margin cream skimmer, and Mercedes wants to keep it that way.

The reason piracy is bad is because it hurts the little guy who wants to do the right thing and buy his software. He can't afford the Mercedes products, and there aren't any Escorts for him to buy because piracy sopped up that market niche. So he doesn't have a place to spend his limited money. He winds up either having to do without, or turn pirate himself.

Now Borland had the right idea about how to deal with piracy. Since most pirates don't Xerox the instruction manuals, they have to go buy a third party book to learn how to use the software they just ripped off. What Borland did was price their product "like a book", so that there was no advantage to ripping them off, it cost the same either way, so people just bought the software with the manual. Some other vendors saw that as a threat to their cream market. They didn't want to lower their prices to match Borland, so they started including the manual online with their software so the pirates wouldn't need to go buy a third party book. This killed Borland's "like a book" sales tactic while not damaging the big software vendors' cream corporate market.

There are two ways to make a profit from sales of any item. You can sell a few at a very high margin, or you can sell a lot at a very low margin. It is cheaper to produce and market the high margin product than the low margin product because there are fewer customers to target, less product to produce and ship, etc. So the cream market is the most desirable one. But you can't do that if you have effective low margin competitors who are willing to undercut you in the cream niche. So you let the pirates consume the volume the low margin producer needs in order to profit, and you rid yourself of competition in your core market. You didn't want to sell to Joe Shmoe

anyway, because you'd have to cut your price to do so, and that would make your cream customers unhappy about paying a higher price for the same thing, so the fact he got his copy of your software via the Jolly Roger doesn't bother you.

There are effective ways to prevent software from being pirated. The dongle is the classic, but Intel also offered at one time to embed serial numbers in their chips so that software could be written which would only work on the particular CPU for which it was purchased. The software vendors didn't go for that. It would have removed piracy as an anti-competitive tactic in their cream skimming operations.

>Is the ":-)" meant to be friendly, or to signal a spoof? It has to be
>the latter.

Well, it is a spoof, but one intended as a real example. A number of
hams have told us that the minute the tower went up, their neighbors
started complaining about interference. When a ham shows them that the
antenna wasn't connected to anything yet, the neighbor usually accuses
the tower of stealing all the signals from the air.

I guess if I have to explain it, it isn't as funny as I thought. :-)

Legally, you are not permitted to transmit on the aviation band
unless you are involved in a flight operation, either as a pilot,
controller, airport advisory station, etc.

I don't say it isn't done, but it is not permitted. And as a
pilot myself, I would be _most_ upset to hear ground chatter on
a frequency reserved for ATC, advisories, weather, etc. You
should know that many airport towers and flight service stations
have accurate direction finders built into their consoles, so
it wouldn't be hard to locate an unauthorized transmitter.

Happy listening!

Software is priced too high!, I gave better stuff away free.

I'm not going to pay a dime to any Basic programmer who thinks
he is hot stuff. Most large commpanies have defeated the problem
with OEM versions of their software, $15 dollars to MS for Win95
is better than a dealer shipping a hot copy with a CPU.

Did you avery wonder why you can buy a $1,500 Computer and get
about $600 worth of software with it.

If I just had more time.

I'm working on some VERY GOOD Ham study software that will create
Test pages, teach etc. All graphics included. It will be FREE
on the net when it is ready. I expect to put it on the market
after the new NOVICE/TECH question pool comes out this summer.
It will beat most of the stuff you can purchase and I will
give it away FREE, just to make a name for myself.
If anyone wants to sell it at a HAM fest, all they have to do is
tell me, no royalties, no cash it will be free.

Bruce

The problem with most commercial scanners is that they don't
have a wide enough bandwidth for the wx sats. The polar orbiters,
which you're trying to receive need a 50KHz IF bandwidth. This comes
about from; 37KHz deviation + up to 5KHz off frequency + doppler
shift of +/- 3KHz at 137 MHz = 48 or about 50 KHz. Much less than
that and you'll start clipping the audio.

> SO......
> 1) Assuming I find an antenna, will the little 741 interface
> and the shareware program for weather fax I got with it do the
> job for 137 MHZ reception ?

Don't expect great results. The commercial demodulators phase
lock to 2400Hz subcarrier to keep the borders straight and
other circuitry to get good data.

> 2) the Nuts &volts article has a diagram of a double crossed
> dipole antenna. Bottom cross must be grounded as "reflector",

> ancient RLL handbook design... OK. but what length??? The
> formula in my 1970 Arrl book doesn't look too useful over 50MHZ
> or am I banging the calculator wrong???

Get a new ARRL antenna book. There are designs in there for
wx sat antennas. A recent QST (Aug. 96?) has an article for building
a Quadrifilar Helix very cheaply which is the best circular
polarized omni antenna.

> 3) I am really interested in the High Orbit 1691 MHZ sat

> On the other hand, I garbage picked an old sat reciver a while
> back (swapped it off.... they aren't worth much if they don't
> de-cypher) Now.... hmmmmm..... Conversions anyone???

You need a low noise figure (<1dB) preamp/downconverter for a
reasonable sized dish, about 4 ft. Of course a used TVRO 8 or
10 footer would allow use of a noisier receiver.

> 3B) Those really cheap mini-sat disk systems being sold to
> hook one in to paying subscription fees forever.... wonder how

> modifyable these are....

Not! Sorry.

For more info on getting started with the wx sats visit my weather page: http://www.aa6g.org/weather.html

Good luck,

As an ARRL member in good standing (since 1953), I *hope* the above does not
in any way represent the thinking of the folks who represent us at the ARRL!

Is CW now such a dead issue that the ONLY way hams might learn it is because
they are FORCED to learn it to obtain a license?

What is wrong with the idea of getting as many hams on air as possible (via
relaxed licensing requirements) and then EDUCATING them to the joys of CW?

Howdy Tony -- not sure of your question but near real time DX Spots are
available from several DX packet Clusters world wide. Go to URL:

http://pw2.netcom.com/~ac6v/page8.html

There are several links to try out.

New release of P-Base

Version 1.01 corrects some problems reported in the initial release and improves the PD import feature.

If you are evaluating P_Base, upgrade to Version 1.01 by downloading the new version via my Homepage "http://www.devans.demon.co.uk", (or add "/p_base.htm" to go direct to the P_Base page).

Regards,

Dave Evans

Not necessarily, I enjoy cw and would like every amateur to learn it,
but something
the "new age" code less hams could do is a little reverse Elmering. I
know very
little about digital communications (spread spectrum and the like) but I
can fix
an old tube rig. It would not bother me in the least for a no-code to
explain
spread spectrum and possibly how to build such a rig. (And it would not
have to beep)

Hi! I agree with the other posters suggestions for using AM radios,
but I especially urge you to look for faulty/intermittent streetlights -
those that are weak and turn off/on a lot, either from faulty day/night
sensors or from overheating. I've been almost driven mad by one that was
going on and off because of overheating/poweroff/turn on etc etc.

Good luck!

My personal distance records on 2 meters are from
Mt. Katahdin, ME (5200'+) to St. Johns, NB, about 105 miles
on 1.5 watts (Icom micro 2AT), and from Mt Snow ski
area, VT (3800'+) to the Mt Washington repeater (6288'),
about 125 miles away (Alinco DJ-560, 3 watts).

Both were with telescoping antennas.

For Sale,
Hamtronics Repeater Controller with AP3 Phone Patch. All in good condition. All you need is a simple transmitter and receiver. The controller also has a port for an auxilary receiver, good for linking to another repeater. This controller was factory built, not a kit. Comes complete with owners manual. Price is $200 shipped.

Maybe the smoker refused to take the corrective action of improving
the ventilation. He/she *would* be the burdened party, you know.

An analogy: If I crank up my stereo to the point where it bothers my
neighbors, why should they have to soundproof their apartment? I am
the one creating the problem and should therefore, have to take any
and all corrective action.

>

The warranty on my 95 Taurus said "VOID" if a there was a "non-professional" radio installation of over 5 watts. That was kinda scary! But heck if I didn't make any obvious holes then how would they tell?? So I used a trunk lip mount with a 40 meter hamstick (No repeaters required...anywhere) and powered my TS-50 from the cigarette lighter plug. (At a reduced 50 watts because the plug is only good for 15 amps. No grounds, or direct battery cables, I broke all the rules. It worked great. Probably not as good as a better installation but I was getting out OK and having great fun. There was no problem from the car computer and better yet, no car noise on my receiver. I lucked out! And best of all no static from the XYL on those unsightly holes in the car......73 CW OP

==========

For what it's worth, for the past three years I've been running 50
Watts on 2M/440, as well as 600 Watts HF in a Jeep Grand Cheroke. No
problems whatever.

A good clean installation with proper rig grounding, adequate+ power
leads dirrect from battery, good antenna with proper SWR are the keys
to success.

Good luck, 73

Overwriting drivers? Sounds like your problems are self inflicted. Maybe you need to have a clue as to what your doing, before you start installing that pirated software.

Phil,

Is this documented someplace? I've seen several pieces of code that I wrote
years ago floating around on ASP tables at hamfests. The sellers will tell me
straight up that they have 'the authors' permission. I must have amnesia, I don't
remember giving 'permission'. Only one guy who distributes it had my permission,
because he was polite enough to ask.

1747. Sat weather maps the cheap way: questions o plenty...

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-23 00:00:00 UTC
From: helling@uwindsor.ca
Message-ID: <E4G89B.B0x@news.uwindsor.ca>
Source record: 206480
Cross-posted to:
rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.space,rec.radio.scanner

A few questions on the fine points of weather satellite image
reception...
(on a shoestring budget.......)

I have read the article in Nuts and Volts, picked up the LM741
fuzzbox interface for my Pc (it does reemble a crude guitar
fuzzbox effect...what an odd way to get square waves!!!!)

My ancient heathkit GR-64 has a BFO, am bust dusting it off,
Won't hook the mess up until I get an isolation xformer for
the patch...

AND.... Tadah.... just scored an ancient Radio-shack PRO-33
20 channel scanner for that all-important 137 MHZ reception...
As the scanner tunes in 5KHZ steps, it might even
tolerate the reported doppler shift...

SO......
1) Assuming I find an antenna, will the little 741 interface
and the shareware program for weather fax I got with it do the
job for 137 MHZ reception ?

2) the Nuts &volts article has a diagram of a double crossed
dipole antenna. Bottom cross must be grounded as "reflector",
right? Top one is PVC and wire along the sides, just like the
ancient RLL handbook design... OK. but what length??? The
formula in my 1970 Arrl book doesn't look too useful over 50MHZ
or am I banging the calculator wrong???

Any suggested lengths???? Got baling wire o plenty...
(then off to the cable co dumpster for coax.... and away we
go...)

3) I am really interested in the High Orbit 1691 MHZ sat
images... But that $US600 downconverter.... ulp...
On the other hand, I garbage picked an old sat reciver a while
back (swapped it off.... they aren't worth much if they don't
de-cypher) Now.... hmmmmm..... Conversions anyone???

3B) Those really cheap mini-sat disk systems being sold to
hook one in to paying subscription fees forever.... wonder how
modifyable these are....

Ok...at this point my ignorance is REALLY SHOWING, but heck...
one week ago I was ripe for a Ramsey 137 MHZ kit (fortunately

I am perpetually broke), and then I pick up the scanner at a
2nd hand store for CAN$30.... As a bonus, I get to hear the
walky-talkies at macdonalds 4 blks away (YAWWNNNNNNN!)

This sat stuff looks great.... (I used to mess with
electronics and DX a bit, went to University, got useless
degree, decided to have FUN, went to ART school, got a REAL
USELESS DEGREE, and now do gallery sized set-ups involving
wonky technology... Still can't draw worth a %$&....
So what If I recycle a few sci-fi plot lines here and there...

TRY this....
Sat receiver => computer => stored images scripted to slide
show mode, adding latest image to end => cheesy VGA-2-video
coverter => rented scan rate doubler => rented video projector
high up projecting on the floor of a darkened room...

OOOOHhhhh..... View from a height....

The pro sat pictures from high orbit would be best, but the
low orbit ones are a good start...

Any tips, sites, advice, apreciated big time...
Thanks & regards.... B/H

>In the US you cannot do it. Unless someone markets a type accepted
>external amp that I don't know about. You wouldn't be able to install
>it yourself unless you hold a GROL. (legally).

Someone does make amplifiers for VHF aircraft handhelds, can't remember who,
but I regularly see them advertised in catalogs such as this one:

Wag-Aero Group of Aircraft Services General Catalog
Phone: 800 558-6868; 414 763-9586
Fax: 414 763-7595
Mail: Wag-Aero Group, Inc., P.O. Box 181,
1216 North Rd., Lyons, WI 53148 USA

I would bet that a better antenna than the rubber duck on the handheld would
make more difference than the amp. Attempting VHF communication over distances
of several hundred kilometers will probably require a yagi beam antenna and
some altitude.

I've got an Optoelectronics Scout for sale. It's a scout model 25 with a frequency range of 10Mhz-2.8Ghz. It requires a CBAR interface to interface to the AR8000 and 2700, and I have and will provide this also. It's in good shape and works well, I had it recalibrated and cleaned at the end of October 96.

I'm asking $300 for the Scout and CBAR Interface, please e-mail me at mwaldron@ohio.net.

Ventilation within the building would be considered a common area.
Units owners who smoke must personally pay to fix up common areas?
Non-smokers may expect the condominium association to fix up common
areas?
>
>An analogy: If I crank up my stereo to the point where it bothers my

>the one creating the problem and should therefore, have to take any
>and all corrective action.

Nope. The act of smoking cigarettes is generally not burdensome to
neighbors when done in one's own home. In this case, there is one
hypersensitive neighbor who may even have an allergy problem. She is
the one with the problem (hypersensitivity) but she expects the
environment around her to conform to a stricter set of rules so she
can live a more comfortable life. She could care less about anyone's
"rights", especially perhaps a "smokers" rights.

Your analogy of the stereo would track more closely to the smoker
operating a barbeque grill indoors. There a court order would be
appropriate ;) Smoking cigarettes at a reasonable level would be more
analogous to the noise generated when talking with friends on the
phone.

I predicted there would be several who see nothing wrong with this
(originally described on the Rush Limbaugh TV series...and I
personally did not "ditto" very often!). The term "mini-fascist" is
his. I am carrying it over to include people who would attempt to
preserve the rural experience at all costs. In eastern NC, the rural
experience would have to include hog farms (now talk about odor!).
Perhaps a hog farm next door would allow her rural experience to be
more representative of rural "reality" than the obvious fantasy she is
living.

Bur you agree with the plaintiff. I understand.
Smoking is not good. It is analagous to operating a stereo full blast
so what the heck, make him put it out, even in his own house, that he
paid for and holds title to. After all, we have a victim. Whenever the
victim gives us a clear choice as to how to be politically correct,

then any end justifies the means. And smoking has been politically incorrect for several years now.

(And we used to be a nation of pioneers)

Yet that is exactly one of the reasons the Home Recording Rights
Act was passed which allows you and me to make audio
copies of musice from the radio, from another cassett, from
a CD-ROM, etc. as long as it it for personal use. The music
industry claimed huge losses from illegal taping, but
it was shown that tho taping, even if it was stoppable,
was not going to cause hugeadditional sales at all because
most tapig was by teenagers without the discretionary income.

Don't kill the messenger here just because you don't
like the message. Review the legislative background
involved in that copyright change.

Actually you wouldn't. No one would pay $1000 for a terminal program,
so your return per hour spent would be $0. It doesn't matter how much
time or effort a programmer puts into a piece of software, it is only
worth what people are willing to pay for it. That hinges on its perceived
value *to them*. This is Marketing 101.

Most ham software has a low perceived value, so it will never command
a high price. That means that you have to A) put little effort into it,
or B) get a *huge* distribution in order to make a profit on it, or C)
you have to accept you're doing it as a hobby and release it to the public
domain.

Hi;
Some of us HAMs are going to be fortunate enough to be going to Dayton.
I thought that these news groups could be used to make contacts for
'that
special item you are really looking for'. This may save the potential
purchaser and seller some time. With that in mind and the permission of
the
group let me suggest that you post:
1. what you want,
2. What time you'll be there,
3. and a Freq., or booth# to contact the vendor - simplex.
4. With no disrespect to large vendors this should be limited to smaller
'flea market' items.
5. WTAB: = Wanted To Buy At Dayton.
- - - - -
Cheers, VE3SLJ. Gabe.

Let me start:
1. 6M SSB transceiver.
2. HeathKit Phone Patch Schematic for the older H101 radios
3. Used DAA for phone lines.
4. ~200Mhz Oscilloscope, recently calibrated. Must be willing to
demonstrate operation.
5. Used Freq Counter up to 2Ghz.
6. 70cm, or 23cm Data Radio's - for packet (preferrable tuning other
than replacing crystals).
7. used 70CM FMvoice pagers.
8. A dual band recceiver for P3D - this is a pipe dream right now,
but you never know.

I'll be monitoring the Dayton Call in for contact and we can switch
to a simplex freq. Or, by all means Email me at gabe@bnr.ca, or
gabe@interlog.com.

Cheers, and '73. VE3SLJ, Gabe.

This is just so damn funny.

Mr. Deignan may not be aware that the HTX-212 is the mobile
rig, and is capable of 45 watts output. If the owner transmits
on high power, that 5W dummy load may not last too long.

The HTX-202 is the 5W HT.

I guess he was going for humor first, accuracy second.

Missed on both.

Your comments miss the point. The higher class licenses are seeing
NO growth. In fact, they are seeing **negative** growth.

But hey, that's OK. As the old CW crowd dies off, so will the HF
component of our hobby. But that's better than opening up HF to young
people, right? We'll just keep that CW requirement, which deters
today's smart young people from joining our hobby. Heck, my Grandpappy
had to do code to get onto HF, why shouldn't today's computer-savvy
young people?

Although, you know something? Grandpappy didn't know squat about
computers...

>When you consider that most software is made and sold by large corporations,
>it's a little hard to feel sorry for them. Especially after one has been
>downsized because some schmuck in upper management decides the company
>has a tummy ache. Most software authors are just employees, just like
>the rest of us.

And just as subject to layoff as the rest of us if their company doesn't
turn in good quarterly results. So don't feel morally justified in ripping
off the big companies, because you're really ripping off the employees
too.

>Recently saw on PBS a debate on what's wrong with American industry,
>someone from Japan comments that American companies have killed any
>sense of loyalty from their employees. No shit Sherlock, after all
>these damn mergers and takeovers and downsizings. Give us a REASON to
>be loyal.

Unfortunately, what you say here is true. Loyalty is a two way street.
If the company isn't concerned about its employees, its employees won't
be concerned about the company.

>author because he wouldn't have sold that person a copy of his program
>anyway. And no, I don't believe Photoshop would be 50 dollars a time
>if we wiped out piracy tomorrow. Or even 100.

Right, they're cream skimmers. They make their money from sales to
the Fortune 500. If they lowered their price to the range where Joe
Shmoe could afford it, their corporate customers would demand the
same price break, and their profit would fly out the window.

But someone might decide to offer a lowball program that does most
of what Photoshop does for under $100 if piracy hadn't destroyed
that market niche. That would fall into Joe's price range, *and* it
would attract the Fortune 500 buyers too. Photoshop wouldn't like
that. So they make it easy to pirate their software.

That doesn't excuse piracy, of course, it just shows that some of
the software vendors who scream about piracy are really hypocrites.
They've taken advantage of piracy as a way to maintain an anti-
competitive position in their core market.

Shuttle does not use CW as a backup (if they did, astronauts would
be trained in Morse, and wouldn't need a waiver from the FCC to operate
space based amateur stations because they could pass the Extra license
Morse exam required for space based operation). In fact, every SAREX
flight has required a waiver, and most ham astronauts are no-code
Techs.

And Capt O'Grady didn't use Morse either. He did use an automatic
digital distress radio, which sends out a signal with a low probability
of intercept by the enemy, IE it isn't CW, to attract the attention of
friendly rescuers. He didn't have any two-way contact until voice comms
were established. He confirmed this himself in interviews after he was
rescued.

The decoders alone aren't illegal, but in combination with the scanners they drive, the system is illegal. ECPA bans manufacture or sale of any receiving system capable of receiving cellular which can automatically access more than 4 channels. These systems can, so they're illegal. (With exceptions for law enforcement of course, cops can always break laws with impunity, "Who watches the watchers?" is as old a problem as government itself).

Very interesting article at
http://griffy.nmt.edu/sara/sara/finley.morse.html

on learning CW at very fast speeds right from the get-go. It was
successful in the '40s. And with computers to generate the method, it
is very easy to implement the training today.

best regards,
Gary

Actually you should use complementary colors for the forward gain of the antenna, and opposite colors on the backside, this may require you to repaint your house as you rotate your antenna, but this is a minor detail compaired to the gain you will experience

>This is a very lame arguement, and what you are basically saying is that
>copyright laws in general are not legitimate. You may feel that way, but
>that is the law of land!

If you had bothered to read the rest of the article before spouting off,
you'd have discovered that I do not use this as a justification for violating
copyright. As someone with copyrighted works of my own, I am sensitive to
copyright issues. I was addressing the very specific point that piracy is
not a direct loss to either the person whose software is copied, or to the
software's author. This is very different from the theft of an automobile,
which the person to which I was responding was attempting to liken it.

Auto theft causes a direct loss to the owner of the auto, but ironically is
a net gain for the auto manufacturer since he gets to sell a replacement
vehicle. Piracy represents no such direct loss to the person whose software
is copied, and in most cases it represents no loss to the author of the
software either since the person committing the ripoff wouldn't have bought
a legitimate copy anyway.

I then went on to note that some software vendors subtly encourage piracy
as an anti-competitive measure to maintain their market position in their
core market. When they scream about $20 billion in losses due to piracy,
they are being hypocrites as well as playing fast and loose with phantom
sales numbers. The truth is, most ripoffs don't represent lost sales. The
reason for that is because most ripoffs are committed by people who only
want to "play" with the software, and wouldn't have paid the inflated
price of a legitimate copy for mere play. (Now commercial ripoffs are
a different matter, and software vendors *do* treat those seriously because
they *do* represent lost sales, but they are a small part of the piracy
problem.)

Thanks for an informative post, but I think you got the model numbers wrong. The original version without lockout was the TH-79A. The revised version is the TH-79A(D) (the "D" stands for "Delux"). There is now another "version", the TH-79A(DH); it's the same as the -79A(D), but ships with a higher voltage battery allowing higher max transmit power.

>There are successful teachers out there, but they have learned to get
>around the "system" and look for the BEST way to teach and motivate
>individual students.

This is all very true. Different people have different ways of absorbing information, and have different aptitudes for absorbing different types of information. It is not just how they are taught, but what they are taught which can make a big difference in their success or failure. It is a left brain/right brain sort of thing. The left brain specializes in logical and rational subjects while the right brain concerns itself with pattern recognition and spatial relationships in a more intuitive way. One person may excel at left brain topics while another may excel at right brain skills. To a large extent, that appears to be genetic, though intensive training can overcome that genetic bent (or talent if you will) to some lesser or greater extent. Since everyone is a genetic individual, instruction has to be individualized as well for best effect. Thus the value of the assembly line education factories is limited at best.

>I hate to see amateur radio throw the baby (code) out with the bath water,
>so to speak, on the argument that it can't be learned, obsolete, not
>necessary, etc.

>
>So many things are being "dumbed down" today, it's nice to see some
>standards of learning being upheld.

Standards are only as useful as the things they are used to measure.
This is the real heart of the code testing argument, IE is the thing
being measured useful or relevant to government's legitimate concerns
in licensing today? I would suggest that Morse testing fails to show
relevance to those concerns today. Standards often fade in relevance
over time, IE the standard kilogram is a viable and vibrant standard,
but the standard pennyweight has faded to a mere historical curiosity.
Morse standards are like the pennyweight, the furlong, and the fortnight.
They have faded in relevance over time. We need to acknowledge that
fact, and adapt our regulations to that fact. Today, other things have
gained relevance to amateur licensing, and should be emphasized rather
than continuing to venerate a historical curiosity as the primary
determinent of amateur qualifications.

: drive the program at his or her site to see if you like it? This
: would be the ONLY legal way to do it, and it keeps you from
: cluttering your disk with useless junk.
:
: I don't buy into the 'I've been burned before' bull, although it
: would be a rather cute justification for these illegal actions.

Well, let me say, "I've been burned before". "it" looks good on the
legitimate owner's computer, so i went out and bought "it" and "it" turned
out to be a piece of crap. The day it happens to you will be the day you
won't think it's bull anymore..

I had Doom 2 on my computer for a couple months before I actually went out
and bought it. And if you buy it in the long run, i don't see the problem
with it. I've done that with Doom 2, Quarantine, Telix, and a load of
other software. I really like the shareware concept, and in the event that
a product isn't shareware, personally i "make" it shareware and try it out
for a bit.

You could say that stealing a car is bad even if you pay the price of
the car afterwards, and that you even had the opportunity for a test
drive. But if you've driven 2,000km on the car and then you realize it's a
lemon, you'd be wishing you had a longer test drive.

anyhow, i think this issue has been heard a bit too much on the Net, so..
i won't say anymore on this debate :)

Hello,

My name is Chiron and I'm a student at a Dutch school.
There are a lot of VSRW measuring equipment available in electronic shops,
but I can 't find books or other literature about the theoritical working
of those VSWR equipment. The prinsipal of VSWR is not a problem but I want
to know some implementations and how it works.

If you know some good books or publications please send me a mail.

Greetings and thanks in advance

Tom,

I am not 100% certain, but I believe you would have to have (at least)
permanent residence status
in Mexico ... they seem to want to "reserve" the XExyyy callsigns for
Mexican ops ... I am not certain
if they will issue a permanent license to non-citizens.

The reciprocal permits are good for the duration of a turist visa (6 mos.
max) ...

> It seems to me like a war between ignorance and knowledge.

Dislike for, or just lack of interest in, Morse does NOT equate to
ignorance. I am sure
that I am not alone in resenting your assertion.

> Those, who know the code, know what they are talking about.

Not necessarily ... there are quite a few "with-code" hams who don't know
squat about
radio ... and many others who don't know how to act on the radio (listen to
80m and 20m).

> The fun of "getting through"
> on low power even (like I experienced it last weekend) and what other fun
> might be associated with the code.

What's wrong with "the fun of getting through" at signal levels where code
couldn't even BEGIN
to be heard, let alone copied?

> Have not experienced it in full myself,
> but some of my ham radio buddies back in Germany seemed to have kind of
> mystical experiences, chirping away while telling me what the other
> station just sent.

I'm sure that there are people who enjoy churning their own butter by hand,
too ... fine.
Different strokes for different folks ... just don't insist that I churn my
butter by hand (or
use/work like a dog at gettign better at CW ... I could not be less
interested.).

> Those guys, who pejoratively talk of "beeping" obviously don't know, what
> they are talking about. You wont hear beeps from those who enjoy the
code,
> it is more like chirps.

Beeps, chirps ... what's the big deal? It's still a bunch of fanatical
enthusiasts who
insist on forcing their antiquated methods on everyone, like it or not.

And THAT does NOT a valid, relevant licensing requirement make ...

It's a heck of a lot cheaper to just replace all your tubes with bottles whose digits are twice the original. I was running a pair of 6LB6's in the final of my Galaxy GT-550; after I replaced them with 12LB12's I I easily worked stations twice as far as before.

I've started replacing all components in the rig with values twice the original, e.g. 940 ohm resistors have replaced all the 470 ohm ones; even a 2N1274 transistor was replaced with a 4N2548.

The results are unspeakable.

When you consider that most software is made and sold by large corporations, it's a little hard to feel sorry for them. Especially after one has been downsized because some schmuck in upper management decides the company has a tummy ache. Most software authors are just employees, just like the rest of us.

Recently saw on PBS a debate on what's wrong with American industry, someone from Japan comments that American companies have killed any sense of loyalty from their employees. No shit Sherlock, after all these damn mergers and takeovers and downsizings. Give us a REASON to be loyal.

Hard to think morals with companies that act amoral to their employees. Legal, yes, moral, no. I support the Korean workers in their protests. Give me a little respect, and then I'll worry about your copyrights.

Tom:

Because we have a bunch of thieves among us who actually use ham radio to facilitate software theft. You ever hear over the air: "Oh, you like that program? Why don't you send me a copy?".

And we have further miserable SOB hams who rationalize the practice by saying "So what if we steal it? We're only hurting 'big business', who is always taking advantage of us pathetic, helpless little guys".

So the thread is to raise awareness and save us from ourselves, hopefully setting a bit higher standard.

I don't hear any oboes on 40m - one could probably send CQ on an oboe
for years and never get an answer. Silly suggestions.

>But heck ... ANYTHING to keep the "Morse Challenged" riff-raff out,
>right?

They've got 50 megs and above - that's over 97% of our available spectrum
up through the 23 cm band.

>As an ARRL member in good standing (since 1953), I *hope* the above does

Why didn't you sign your call? Your remarks sound suspicious...

>Is CW now such a dead issue that the ONLY way hams might learn it is
>because
>they are FORCED to learn it to obtain a license?

1. It's been required since the end of WWI; was it a dead issue back
then?
2. No one is being forced. One can work DX on 6m or 11m without having
passed the code requirement. There is ~125 MHz available to hams between
6m and 23cm if they choose not to learn the code. The remaining 3.75 megs
is awarded to those who choose to learn it.

>What is wrong with the idea of getting as many hams on air as possible
>(via
>relaxed licensing requirements) and then EDUCATING them to the joys of
>CW?

Well, if the goal is to get as many people as possible on the air, why not
do away with all licensing requirements? I don't agree that sould be our
goal, though.

>
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
The APT signal is about 38KHZ wide, so the scanner
won't yield a useable signal until it's modified.
Usually a resistor across a couple of the IF ckts
will lower the Q enough to get by. You might have
to change a filter. Either way, the signal to noise
ratio is degraded by increasing the bandwidth, so
a pre-amp at the antenna will be helpful.

Judging from some of the phrases that Carl Stevenson WA6VSE uses like..

blow me
screw you
f**k you

I proudly nominate

Carl Stevenson
Des Plaines, IL
amateur (in every sense of the word) call WA6VSE

Carl is very active in computers and electronics. Carl has done alot to
recruit new amateurs into the hobby and being the sexless person he is,
he certainly qualifies for a sexual or is that asexual minority.

Good luck Carl, I know you'll win by at least 50% +1

>controller, airport advisory station, etc.

In addition, you're supposed to have a station licence for your transmitter. The aircraft's own station licence covers any aviation-band transmitters used in it (which is why pilots can use handheld transceivers in airplanes without fuss). But if you're not in an airplane, you need the station licence.

On top of that, I think that transmitters in the aviation band have to be type accepted. So you'd have to have a radio that's explicitly sold for aviation band use.

TSARC is very much alive and well. It was a major "player" in the creation of the new National Frequency Coordinators Council and National Frequency Coordination Office. If you get a copy of the latest ARRL Repeater Directory, you will find its current mailing address. Or, you can contact your new ARRL Hudson Division Director Frank Falon N2FF or ARRL 1st Vice President Steve Mendelsohn, WA2DHF. Both live in the Tri-State area and you can get their address/phone number out of any current issue of QST magazine.

And, as far as I know, the ARRL still only accepts repeater listings from the coordinators that they recognize. I do not think that they accept individual filings. You can call ARRL-HQ to check.

Bill, I attended last April's TSARC meeting, and was surprised to see
the organization dissolve soon after. (Not my fault). Richard
Sandell was the treasurer then, but had to resign to take over
the Hudson Directorship, and had no time for TSARC. Other
resignations there occurred soon after. We had allocated $50
to register www.tsarc.org and that never happened either.
So, I'm surprised to see you stating that TSARC is alive.
If it is, I'd sure like to see the warm body. -pat

Propagation Forecast Bulletin 4 ARLP004
From Tad Cook, KT7H
Seattle, WA January 24, 1997
To all radio amateurs

SB PROP ARL ARLP004
ARLP004 Propagation de KT7H

We are still at the solar minimum, with very little activity to report. Since there are no really active regions that we know of on the solar surface, there is no activity to forecast as the solar surface rotates relative to the Earth.

This week's average solar flux was exactly the same as the week previous, and the sunspot numbers were barely higher. Unlike the previous week, there were no periods of geomagnetic activity, and the A index stayed in the single digits.

The next few weeks are expected to stay the same, with the solar flux around the low to mid seventies, and the A index around five. The A index may jump up to around ten on February 3, and again around February 6-9.

Sunspot Numbers for January 16 through 22 were 16, 12, 34, 0, 0, 0 and 0 with a mean of 8.9. 10.7 cm flux was 74.8, 74.1, 74.6, 75.3, 76.8, 74.1 and 73, with a mean of 74.7. Estimated planetary A indices for the same period were 3, 2, 5, 4, 5, 9, and 5, with a mean of 4.7.

I've always liked the GE MASTR II for VHF and UHF FM.
They don't suffer from birdies, and have negligible
intermod (and cost $50 on the surplus market). King
and Bendix made suitable AM aircraft radios, though of
course they do suffer more degradation than a good FM
rig due to the nature of the modulation.

If you're looking for a Japanese scanner (that also happens
to have an amateur transmitter), which is free of birdies
and intermod, I think you'll be disappointed. It is the
nature of the beast. You need good tight helical filters
in the front end to keep out the crud, and you can't do
that with a wideband scanner.

I had talked to the FCC EIC about the problem, He said they weren't
interested in doing anything and that *I* should solve the problem.
I take that as official sanction. Anyway, it is ancient history now.
The neighbor relocated to Buffalo NY. Now he's their problem.

VE -Lindenhurst,LI Jan 26, 1997

The Great South Bay ARC hosts ARRL amateur radio exams every 4th
Sunday at 12 noon. Please note the change for the month of June.
Re-scheduled because of Field Day and Father's Day.

Exams are given from Novice to Extra class.
All exams are ARRL/VEC, CW exams are multiple choice w/ full headphones.
The examination site is in the ARES/RACES room located in the basement.
Access is at the rear of the building via stairs. Ring RED (TOP) buzzer
for entry.

Location: Babylon Town Hall
Emergency Operations Center
200 E. Sunrise Hwy.
North Lindenhurst, NY

Talk in : 146.685/r 136.5pl

Please bring the following:
- Photocopy and original of current Amateur Radio License if licensed.
- Photocopy and original of CSCE(s) that are current.
- two forms of ID, at least one photo ID.
- pens or pencils.
- Calculator for math problems on exams, no pocket computers are allowed.
- 1997 Exam fee is $6.25, please bring exact change.
* Novice exams (elements 1A & 2) are free.

For addition information you may contact:

1804. GB2RS News 26th January 1997

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-24 00:00:00 UTC
From: No Junk Email Please <noone@llondel.demon.co.uk>
Message-ID: <854155355snx@llondel.demon.co.uk>
Source record: 206331
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 26th of January and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Further to last week's news story of enhanced tropospheric propagation on the 1.3GHz band, we have received a report from Bob Short, G3GNR, that at 2335UTC on the 14th of January, he contacted SM6ESG in JO67CC on 10.3681GHz. The distance worked was 1275 kilometres, which he believes to be a new UK distance record for 10GHz tropo. The IARU Region 1 10GHz tropo record was set in 1983 and is for a distance of 1660 kilometres, between I0SNY/EA9 and I0YLI/IE9.

The 2 metre beacon GB3VHF, which operates on 144.925MHz from Wrotham in Kent, was switched off at 2347UTC on Friday the 17th of January due to a buzzing noise on its output. At present it is unknown how long the beacon will be off the air. Further information can be obtained from the keeper, Bob Mersh, G8JNZ.

On Saturday the 8th of February the RSGB will be holding an Open Meeting in the Hertford Suite, Forte Posthouse, Belfast, which is situated on the main A1 one mile south of Dunmurry. The meeting is open to all with an interest in amateur radio and there is no admission charge. In addition to the President of the RSGB, the presidents of the Irish, German, Dutch, Belgian and French national societies are expected to be there, as will the RSGB General Manager, Peter Kirby, G0TWW; RSGB voluntary officers; and a representative from the Radiocommunications Agency's Radio Investigation Service.

The meeting will be followed at 7.30pm by a dinner and the installation of the 1997 president, Ian Kyle, GI8AYZ. Tickets for this event, which again is open to all, should be obtained in advance from Mrs Fay Huxley, 2E1EUA, at RSGB headquarters on 01 707 659 015. Details of both events appear on page 9 of the January 1997 RadCom.

The RSGB National VHF Convention takes place on Sunday the 16th of February at its usual venue, Sandown Exhibition Centre at Sandown Racecourse. Full details, including a timetable of the two lecture streams, a list of the exhibitors, and a floor plan can be found in the February RadCom, which was posted to all RSGB members on Friday the 24th of January.

Volunteers to broadcast GB2CW Morse practice sessions on behalf of the RSGB are needed, particularly along the South Coast and in Yorkshire and the North East. Anyone willing to devote half an hour of their time, regularly and reliably each week, is invited to contact David Pratt,

G4DMP, whose address is correct in the RSGB Call Book.

And here are some changes to the GB2CW Morse Practice schedule published in the RSGB Call Book:

There is a new transmission in the Brighton area on Sundays at 10.00am on 145.250MHz, FM, from the station of Mark Shepherd, M0AGQ.

The broadcast from Eastbourne by G0EYE on 145.250MHz on Wednesdays has been discontinued.

The broadcasts on weekday evenings by G4INM in Chelmsford on 145.250MHz have been discontinued.

The broadcasts by G0JUD of Aldershot on 145.250MHz on Wednesdays, Thursdays and Saturdays are now transmitted at 2000 UTC instead of at 1900 as shown in the RSGB Call Book.

Now some items of HF DX news from the weekly RSGB DX News Sheet, edited by Chris Page, G4BUE:

From Aruba, two American operators are signing P40X and P4/N9KHC from now until the 1st of February.

From Surinam, OZ2BJC is active as PZ5CJ for about two months.

And from Bangladesh, three German operators will be attempting to obtain an S2 licence for their visit between the 2nd and 14th of February. If they are successful, look for them mainly on CW on the low bands.

Now news of some special event stations:

GB2TB is operating from the Community Centre, the Causeway, Billingham, on Teeside, from now until the 9th of February. The station is making contacts on a sponsored basis in order to raise funds for a permanent memorial to the former RAF Thornaby airfield and all personnel who served there. The airfield was closed in 1958 and the site is now a shopping complex with nothing to indicate that an aerodrome existed.

Twelve Special Event Stations are on the air this weekend, the 25th and 26th, to help publicise the County Air Ambulance Service. An award is available for contacts with these stations. For further details of the award please write to Geoff Woodford, G0KNM, whose address is correct in the RSGB Call Book, or make a contact with the stations.

Next the Rally News:

The Horncastle Winter Rally is taking place at Horncastle Youth Centre today, Sunday the 26th. The main attraction is said to be 'lots of good honest radio junk' and the doors open at 10.30am.

Also today, the 26th, the Lancastrian Rally takes place at the University of Lancaster. The event features a bring and buy stand and special interest groups.

We know of three rallies next Sunday, the 2nd of February:

The Harwell Amateur Radio Society Radio and Computing rally will take place at Harwell Science and Engineering Centre, between Oxford and Newbury. The event features traders and a bring and buy stand and doors open at 10.00am. Talk-in will be provided on 2 metres, channel S22, and for further details please call Arthur Kinson, G0KOC, on 01 235 815 399.

The South Essex Amateur Radio Society rally will take place at The Paddocks, Long Road, on Canvey Island from 10.30am next Sunday, the 2nd. The rally features amateur radio, computer and electronics components exhibitors, a bring and buy stand and RSGB Morse tests on demand. Please take two photographs and the appropriate fee with you if you wish to take your Morse test at the rally. For further details please phone 01 268 697 978.

And the Newport Amateur Radio Society Junk Sale will be held at Brynglas Community Centre, Newport, from 10.00am next Sunday, the 2nd of February. For details ring 01 633 280 958.

Repeater news next:

The 70 centimetre repeater GB3IW on the Isle of Wight, which operates on channel RB4, was expected to go off the air on the 18th of January for about two weeks for scheduled maintenance. For further details, please contact the repeater keeper R G Griffiths, G0ISB, whose address is correct in the RSGB Call Book.

Now for the contest news:

40 metre sessions in the RSGB 'LF' CW Cumulative Contest take place today, Sunday the 26th of January, and on Saturday, the 1st of February, between 10 and 1200UTC. All activity should be between 7015 and 7040kHz. On Thursday evening, the 30th, there is a 160 metre session. It is on CW from 2000 to 2200UTC between 1830 and 1870kHz and between 1950 and 1960kHz. And next Sunday afternoon, the 2nd of February, there is an 80 metre session of this contest. It runs from 1600 to 1800UTC between 3530 and 3580kHz. Novices are particularly encouraged to operate in the 160 and 80 metre sessions and participants gain additional points for contacts with Novice stations. The full rules are in the September 1996 RadCom.

The CQ World Wide 160 metre DX Contest is taking place this weekend. The contest started at 2200UTC on Friday the 24th and finishes at 1600UTC today, Sunday the 26th. Brief rules are in the January RadCom.

On VHF, the second session in the RSGB 70MHz Cumulative Contest takes place today, the 26th of January, between 1000 and 1200UTC.

Next Sunday, the 2nd of February, the RSGB's 432MHz Fixed Station and Affiliated Societies Contest takes place between 09 and 1500 UTC. The full rules of all RSGB Contests during 1997 were published in the September 1996 RadCom.

SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Tango and M1 Bravo Echo series, and Novice calls in the 2 0 Alfa Papa and 2 1 Foxtrot Mike series.

And now the solar factual data for the period from the 13th to the 19th of January 1997, compiled by Neil Clarke, G0CAS:

Solar flux levels were very steady and averaged 75 units. The 90-day solar flux average on the 19th was 76. X-Ray flux started the period at A1 units, increased slightly to A1.4, but returned to A1, averaging A1.1. Geomagnetic activity was 'quiet' and averaged Ap 4 units. Solar wind data for the period from the 6th to the 12th saw speeds steadily increase from 270 to 590 kilometres per second. Particle densities ranged between 3 and 16 but peaked at 30 particles per cubic centimetre on the 6th, 7th and 11th. Bz hovered around zero nanoTeslas every day except on the 10th, when it was strongly negative, with maximum deflections of minus 16 nanoTeslas.

Now the ionospheric data for Central France for the period from the 10th to the 16th of January. The F2 daytime critical frequencies declined from 7.7MHz on the 10th to 5.9MHz by the 14th, and averaged 6.5MHz. The darkness hour lows averaged 2.3MHz but were up to 3.2MHz on the 11th. The daytime highs took place between 1100 and 1500 hours. The darkness hour lows took place at 0500 hours every day, except on the 10th and 13th when they were at 1800 and 2100 hours respectively.

And lastly the solar forecast. This week the quiet side of the sun is looking our way, and therefore solar activity is expected to continue at very low levels. Solar flux should be in the low 70s, but may show a slight increase next weekend. Geomagnetic activity is expected to be 'quiet' all week. MUFs during daylight hours are expected to be about 19MHz for the south and 16MHz for the north. Darkness hour lows are expected to be about 8MHz.

And that's the end of the solar information.

For more on Propagation see http://www.rsgb.org/society.psc.htm.

Hi, all
Who has info about software and field programming instructions for a
Standard HX340 or HX348s (communique), i have a HX348s, and like to
programme this to the HAM Band (144).
What i want to now:
Where can i find (or,who has) the software, and diagram for the
programming interface.
Has somebody experience with this.

There is one sufficient compelling reason. It's illegal to use it
under Part 95. So don't do it.

ARRL BOARD MEETS IN ALBUQUERQUE

The ARRL Board of Directors met in annual session, January 17 and 18, 1997, at Albuquerque, New Mexico. Here is a summary of the meeting highlights:

Responding to survey results that show that the majority of members favor retention of Morse code for HF operating privileges as an international treaty obligation, the Board decided that the ARRL will not support changing the existing treaty requirement--an issue on the WRC-99 agenda. The Board also accepted other committee recommendations regarding the international rules that govern the amateur and amateur-satellite services.

A committee proposal for modifications to the FCC amateur licensing structure is to be published shortly in QST. Members will be invited to comment to their directors before May 31, 1997. The Board will not take action on the committee recommendations earlier than its July meeting, to afford members an opportunity for discussion and comment.

Noting the increasing number of participants in the spectrum management process, the Board created the ARRL Spectrum Forum, an e-mail roundtable for national amateur organizations, as well as regional entities and interests.

The ARRL Spectrum Committee was dissolved, with the thanks of the Board.

In other business:

* Dr Robert C. Smithwick, W6JZU, and Ken Kirk-Bayley, GJ0KKB, co-founders of MediShare International, won the ARRL International Humanitarian Award for 1996. The ARRL Humanitarian Award is given to Amateur Radio operators who have used their skills to benefit others and have worked to promote international goodwill. MediShare International provides medical supplies, instruments, equipment, and trained health professional volunteers to work in clinics and hospitals in Third-World countries. Smithwick's outstanding achievement began in 1989 when he overheard a ham in Rwanda tell another in England that his small local hospital needed a part to fix the only sterilizer in its operating room. Smithwick, a retired dentist, broke in on the QSO and said he could help by using his connections with another service-oriented organization, the Medical Amateur Radio Council (MARCO), founded in 1965. Thanks to the quick efforts of Smithwick, the English radio amateur, and another from the states who volunteered to make the sterilizer part, the Rwandan hospital got what it needed and MediShare International was born. It's now a MARCO program. Over the years, MediShare International has provided hundreds of thousands of dollars to help people all over the world get modern, safe medical treatment. Among other projects, organization volunteers are now working to staff a new pediatric wing at a Kenya hospital. Soon, MediShare International hopes to begin bringing people to the U.S. to teach them medical equipment repair skills they can use in their own countries. (Thanks to Jennifer Gagne, N1TDY, for supplying additional information--Ed.)

* James Jacobs, K1GHT, received the ARRL Certificate of Merit in recognition of his lifetime of humanitarian service and goodwill through Amateur Radio. Michael Pilotti, N3IRZ, also won an ARRL Certificate of Merit in recognition of his arranging for the travel of Ukraine radio amateur Nick Bortnick, UX0ZZ, to the US for special medical assistance.

* The League's Executive Committee was tasked with studying the adequacy of FCC rules governing the qualifications of volunteer examiners, particularly with respect to those VEs who have obtained license upgrades by means of Morse code-element credit-waiver provisions. The Executive Committee was also tasked with investigating the extent of abuses of the Morse code exam-waiver provisions for applicants with severe handicaps and recommending any regulatory changes deemed necessary.

* The Membership Services Committee was directed to study ways to better serve the digital community.

* Atlantic Division Director Kay Craigie, WT3P; Northwestern Division Director Mary Lou Brown, NM7N; Southeastern Division Director Frank Butler, W4RH; and Southwestern Division Director Fried Heyn, WA6WZO, were elected to the Executive Committee.

* Roger Franke, K9AYK, Tom Comstock, N5TC, and Tom Frenaye, K1KI, were re-elected to the ARRL Foundation Board of Directors.

* ARRL will establish an Alternative Dispute Resolution service for the use of individual amateurs, amateur organizations, citizens, organizations and others having disputes over Amateur Radio-related subjects.

Full details on the January Board of Directors meeting will appear in March QST.--Rick Palm, K1CE

FCC FINDS MISSING CALL SIGNS; VANITY PROCESSING COULD RESUME SOON

Following up on "a few inquiries" into why certain call signs were not assigned when they were available, FCC personnel in Gettysburg report they found some 3355 call signs (mostly 2x2 and 2x3 format) that should have been made available for the vanity program but were not, for some reason. An FCC spokesman in Gettysburg reports a search of all vanity applications (including those that required special handling) comparing requested call sign(s) against the 3355 turned up four to be resolved. The other call signs now have been made available for future vanity grants.

As reported in The ARRL Letter Vol 16, No 3, callers to the FCC's Gettysburg office were being told that processing of vanity call sign applications would not resume until early March because of "unspecified computer-related problems." Gettysburg now seems to be pulling back from that date, and a spokesperson said this week that the FCC hoped to resume vanity processing by February 1. Before processing the backlog of vanity call sign applications, personnel in Gettysburg first plan to deal with those applications that required special handling--the so-called "WIPS" (work in process) stack--which is backlogged from early November. A spokesman said Wednesday that the FCC will resume work on the WIPS stack "in about a week." Also, contrary to what several callers were told, the FCC did not issue a public notice about the vanity call sign program this week.

MISSION MIR 97: GERMAN-RUSSIAN MIR SPACE MISSION SET FOR FEBRUARY

A second German-Russian space mission has been set for February, when German astronaut Reinhold Ewald, DL2MIR, and his Russian colleagues will fly to the Russian space station Mir in early February. Once there, Ewald plans an extensive experimental program. Ewald was a back-up crew member for the Mir '92 mission, in which Klaus Dieter Flade, DL1MIR, participated as the first German astronaut aboard Mir. On this mission, scheduled for February 4 through February 24, Hans Schlegel, DG1KIH--who served during the German-US Spacelab mission D-2--will be on the backup crew.

During this mission, the SAFEX (Space AmateurFunk EXperiment) equipment will be on the air, although, due to Ewald's heavy workload, hamming will take a back seat to his experimental work. Ewald plans to use the SAFEX digital voice recorder to automatically transmit information about the mission. The SAFEX equipment--built by German hams--operates on 70 cm in both packet and FM voice modes. The uplink frequency for packet is 435.775 MHz; the downlink frequency is 437.975 MHz. No CTCSS tone is needed. The repeater uplink frequency is 435.750 MHz, the downlink frequency is 437.950 MHz, and the CTCSS tone is 141.3 Hz. For the QSO (duplex) mode, the uplink frequency is 435.725 MHz, the downlink frequency is 437.925 MHz, and the CTCSS tone is 151.4 Hz.

A special QSL card will be issued for SAFEX QSOs and SWL reports. Those making SAFEX contacts are asked to accompany QSLs with a voice recording of the contact on a computer .wav file (3.5-inch disc) to DF0VR, Ham Radio Group at DLR Oberpfaffenhofen, Postfach 1116, D-82230 Wessling Germany.

OL' SOL STILL IN THE DOLDRUMS

Solar observer Tad Cook, KT7H, in Seattle, Washington, reports: We are still at the solar minimum, with very little activity to report. Since there are no really active regions that we know of on the solar surface, there is no activity to forecast as the solar surface rotates relative to the Earth.

This week's average solar flux was exactly the same as the week previous, and the sunspot numbers were barely higher. Unlike the previous week, there were no periods of geomagnetic activity, and the A index stayed in the single digits. The next few weeks are expected to stay the same, with the solar flux around the low to mid 70s, and the A index around 5. The A index may jump up to around 10 on February 3, and again around February 6-9.

Sunspot numbers for January 16 through 22 were 16, 12, 34, 0, 0, 0 and 0, respectively, with a mean of 8.9. The 10.7-cm flux was 74.8, 74.1, 74.6, 75.3, 76.8, 74.1 and 73, respectively, with a mean of 74.7. The estimated planetary A indices for the same period were 3, 2, 5, 4, 5, 9, and 5, respectively, with a mean of 4.7.

WRTC VIDEO IS AVAILABLE

A videotape of last summer's World Radiosport Team Championship (WRTC) event is now available, thanks to WJET-TV and station owner K3TUP. The 27-minute documentary of the biggest contesting event of 1996 captures all the excitement and drama of the competition and presents the contesting hobby at its best. The tapes are available for a nominal shipping and handling fee, and the Northern California Contest Club and the Slovenian Contest Club are handling distribution (any excess funds remaining after distribution will revert to the sponsoring organizations). To order a tape, send $10 (make checks made payable to Bruce Sawyer) and a gummed address label (maximum 2x4 inches) to Bruce Sawyer, N6NT, 15430 Bohlman Rd, Saratoga, CA 95070. The WRTC tape is available in either NTSC or PAL format. The tape is available overseas for US$10 or DM15 and a gummed address label to Tine Brajnik, S50A, Maroltova 13, 1113 Ljubljana, Slovenia.--Bruce Sawyer, N6NT

IN BRIEF:

* Correction: In the report FCC ESTABLISHES 5.7-GHZ U-NII SERVICE in The ARRL Letter,Vol 16, No 3, a word was omitted in one sentence. The sentence should have said: The FCC concluded that an increase in the power limits proposed in its rulemaking notice was supported by "new material in the record in this proceeding" but said that unrestricted antenna gain should not [emphasis added] be permitted because of interference concerns.

* Job opening at HQ: The ARRL has an opening for an Assistant Contest Manager at its headquarters in Newington, Connecticut. Candidates must be

thoroughly interested in and knowledgeable of the League's varied contest programs and familiar with DXCC countries, ARRL sections and divisions, and current contesting issues. An Amateur Radio license, writing skills, PC familiarity (including DOS, Windows, database management and e-mail), and a high degree of attention to detail and the ability to work well under deadline pressure are required. Send resume and salary expectations to R. Boucher, ARRL, 225 Main St, Newington, CT 06111; fax 860-594-0298; e-mail rboucher@arrl.org.

* New VK0IR frequencies: The Heard Island (VK0IR) DXpedition has announced new low-band frequencies: 160 meters, 1822 (preferred) or 1826.5 kHz; 80 meters, CW, 3504.5 or 3509.5 kHz for Europe; 80 meters, SSB, 3798 kHz; 40 meters, CW, 7007 or 7022 kHz; 40 meter SSB, 7047.5, 7052.5, 7057.5 or 7065 kHz. As of January 22, the VK0IR team had racked up some 55,000 QSOs.

* Changing trustee's call sign: When a club station trustee gets a new call sign, the FCC does not automatically change the trustee's call sign shown in its club records. Although this is not required, a trustee can send the FCC in Gettysburg a letter requesting that it change the trustee call sign on the club license. The letter should include the name of the club, the club call sign, the trustee's former call sign and the trustee's current (ie, new) call sign.--FCC

* School Club Roundup: The School Club Roundup (SCR)--February 10 through February 14--is a chance for young hams to meet members of other clubs on the air. The idea behind the SCR--sponsored by the Council for the Advancement of Amateur Radio in the New York City Schools, the ARRL and its Hudson Division Education Task Force--is to foster contacts with and among school radio clubs. Awards are issued for elementary, middle school, high school, and college or university levels for US and DX. Participants exchange call sign, report, entry class, and US state or DX country. To get log and entry forms, send a large self-addressed stamped envelope (SASE) or a label and postage to Lew Malchick, N2RQ, Brooklyn Technical High School, 29 Ft Greene Pl, Brooklyn, NY 11217. The logging program SCR-LOG ver 2.x for IBM-compatible PCs is included with e-mail requests to caarnycs@aol.com. For contest details, see the announcement on page 114 of January 1997 QST.--Lew Malchick, N2RQ

* Cover plaque winners: Tom Spann, WD0HBR, won the QST Cover Plaque Award for the November 1996 issue of QST for his article, "The FCC Grand Island Monitoring Station." Bruce L. Kelley, W2ICE, won the QST Cover Plaque Award for the December 1996 issue of QST for his article, "Hams Span the Atlantic on Shortwave!" Congratulations!

* The DX Magazine has new publisher: Paul and Nancy Smith (ND4X and KB4RGW, respectively) will turn over The DX Magazine to another Smith--Carl Smith, N4AA--starting with the March/April 1997 issue. Paul and Nancy Smith had acquired the publication last year from Chod Harris, VP2ML. Carl Smith is a former ARRL staff member. He already publishes QRZ DX. Paul and Nancy Smith publish The GOLIST QSL Manager List, The DX Bulletin, and The DX Reporter.

* Keeney no longer FCC candidate: The Washington Post this week reported that Regina Keeney has asked not to be renominated for a Republican seat on the Federal Communications Commission. Keeney said she would, instead, remain as chief of the FCC Common Carrier Bureau. President Clinton nominated Keeney last year, but Congress did not act on the nomination. Keeney cited personal reasons, for her decision, but her Senate confirmation was not assured. Some Republican senators reportedly were upset over not being consulted when she was nominated last year.

* VHF confab set: The 1997 Southeastern VHF Society Conference will be held April 4-5, 1997, at the Atlanta Marriott Northwest in Windy Hill, Georgia (located between Atlanta and Marietta). Jimmy Treybig, W6JKV--a leading expert on 50-MHz propagation--will be the banquet speaker. The Conference Technical Program will include presentations by KA2DRH, K6QYX, WA4NJP, KM4YW, WC4X, WA4KXY and others. Antenna gain measurements for 2 meters through 10 GHz and noise figure testing will be available too. Conference registration is $35, which includes a complete set of the Conference Proceedings. The April 4 banquet fee is $30. For registration information, visit the SVHFS web page at http://www.akorn.net/~ae6e/svhfs/ or contact Tad Danley, K3TD, 770-513-9252; e-mail k3td@amsat.org.

* Visit P3D lab: Hams planning to visit the Orlando, Florida, area this winter might enjoy seeing some Amateur Radio history in the making while there. Visitors are welcome at the Phase 3D International Satellite Integration Facility in Orlando. Hours are usually 9 AM to 6 PM on weekdays and 11 AM to 5 PM on Saturdays. If you'd actually like to get a chance to help make ham radio history, plan your visit for a Saturday, which is often an organized volunteer day when the P3D lab has tasks for all skill levels. So you might get a chance to actually lend a hand on the project. The P3D lab is approximately two miles south of the Bee Line Toll road off Tradeport Road (which runs along the western perimeter of Orlando International Airport) at 4101 Lindy Circle, in the Free Trade Zone Building. For the next few months, visitors can expect to see the actual Phase 3D spacecraft in its clean-room facility, along with the full-size functional antenna mockup, payload modules under test and development, the P3D spin-balance test fixture and, of course, the P3D Lab staff! To avoid disappointment, call ahead at 407-859-2344, to make sure someone will be there at the time you plan to visit. For more information, contact Rick Leon, KA1RHL, e-mail ka1rhl@amsat.org or the Phase 3D Spacecraft Integration Facility, e-mail p3dlab@magicnet.net.--AMSAT News Service

* Hams donate community service time: Amateur Radio operators in the Lincoln, Nebraska, area calculate they donated nearly 4700 hours of public service to the Lincoln-Lancaster County community during 1996. Spring and summer storm watches accounted for some 630 hours, while the remaining 4000-plus hours were spread out over two dozen events where hams were able to make an important public service contribution.--Lincoln Amateur Radio Club Inc

* Providence RA celebrates 75th: The Providence (Rhode Island) Radio Association, W1OP, celebrates its 75th anniversary of ARRL affiliation March 22, 1997, 6:30 PM, at the Airport Radisson Hotel, Warwick, Rhode Island. The

club seeks to honor all past members and officers at this milestone event. The cost is $25 per person. Send reservation requests to Providence Radio Association, 1 Ludlow St, Johnston, RI 02919. For more information, call John Winman, KZ1K, 401, 944-1955 or Rick Rosen, K1DS, 401-272-5626; e-mail rrosen@brownvm.brown.edu.

Many thanks for the info on weather sat pickup.....
The article in Nuts&volts mentioned that some modification to a scanner might be in order, and someone else suggested a resistor across the if stage (find schematic yipe!)....

I think I will visit your site to see if I can't puzzle a bit more of this out....

I am hot on the trail of the QST eggtbeater design tho...

thanks again... B/H...

I am 48 years of age and am studying for my Tech Lic now. Someone told me to try this list for news and assistance regarding the Ham community. That is how I got here.

I am a bit stunned by all the CW / no CW "heated discussions. To the point of wondering whether this is the community I want to join.

I started in radios as a scanner listener with one radio. I now have 7 radios, 3 computer controlled and dispatch for a Firepage organization. This growth took seven years. I am also learning radios because I have become fascinated with the whole communication, radio wave, electronic (etc.) arena.

I have taken on the journey in to "HAM LAND" because it seemed a natural progression, and I want to get involved with the community assistance aspects of the hobby.

If I had to learn code at this moment I am not sure I would bother. I have an interest in it and thought when I started studying that if I found that aspect of the hobby (code) interesting I would venture into it then. That is after all the way I got this far. I have gone one step at a time.

To require code of everyone seems to me to be overkill and I do not think it is going to be the requirement that keeps the caliber of the "Ham" high. Perhaps an more comprehensive test would not hurt, if it was pertinent to the hobby and not just to make it tougher to "get in".

A question from the study guide for the test :

"What are three reasons that the amateur service exists?
Answer: To recognize the value of emergency communications, advance the radio art, and improve communication and technical skills."

I don' think "code" is required to accomplish this.

I think Hank's comment is a solid one.

>
>73, Jim KH2D

I don't know how Jim does it, but I'll tell you how I do it. While you can't always hear the signals, you can always see them on the tuning indicator because the machine can most definitely "hear" them. So I just slowly tune across the popular digital segments while watching the tuning display when looking for random contacts.

Digital operators also have "calling" frequencies that we use for some of the advanced modes. When not tuning around or chatting with another operator, I put my system on one of those frequencies. For example, when 20m is open and my station is otherwise idle, it is listening on 14.065 MHz for Clover signals.

Of course there are also the BBS stations operating on well known fixed frequencies. They are always there for you, and you can also lurk around there to find another operator finishing up a link to the BBS. (Of course you should move off the "calling" frequency or BBS frequency once you make contact.)

Using the RST system is outmoded for the error correcting digital modes. I suppose a RST of 509 would make some sense for this sort of contact. More meaningful is the automatic link quality reporting done by Clover as the contact progresses. It is constantly exchanging signal quality information with the other station in order to negotiate ECC levels, modulation parameters, and where implemented, power control information. That's displayed in the upper right hand corner of each operator's screen in dynamic fashion as the systems continously adapt to conditions moment by moment, so signal quality reporting is an automatic part of the process.

Not much of the routine "contact" information needs to be exchanged by the operators. Many of us have online callbooks, so as soon as contact is made the station is looked up in the callbook and the information is printed to the screen. So we know the operator's name

and address without his having to send that over the air (doesn't always work for foreign contacts of course). We can concentrate instead on saying something of substance to the other operator right away. (Though truth be known, many of us have prepared brag files that we routinely send to new contacts to give them the rundown of our stations and interests before engaging in direct dialogue. That can serve as a useful conversational icebreaker.)

Note that many of the excuses used to break off contact with, or to initially ignore, certain other operators is missing from the advanced digital modes. *They* know how well you are copying, and *they* know if you "heard" them call. If you are the type who needs an excuse to break off contact, you have to be more creative with your excuses. If you aren't using automatic power control, you can just slowly turn down the power until the link fails. That doesn't always work, though, I often can't turn the power down enough to make the link fail unless I just yank the cable loose. :-)

Alternatively, you could say that the wholesale rejection of Pavlovian conditioning represents a wising up of amateur society. When elements of the status quo say "frog", newer amateurs no longer automatically jump. Instead they ask that embarrassing question "Why?", demanding justification for past hazing practices.

I've been saying this for years. Why poke along at 1.2 kb or 9.6 kb when you can fly along at ISDN speeds with 56 kb RF modems? And now we have 1.2 Mb radios too. Poking along at 1.2 kb is almost as painful as using Morse. There is no need for amateurs to take a back seat to the wired networks, the technology is there to do much better. The only real obstacle is inertia among current practitioners. Alas, we may wind up paying a monthly fee to some commercial outfit because we can't overcome that inertia and learn to work together to build useful amateur networks.

"Can" and "will" are too different things. Of course young people **can** learn the code. As I stated, today's kids are incredibly bright, and they know a hundred times more about computers than the average Extra Class ham. But frankly, the code bores them. We hams are in a seller's market, not a buyers' market. The problem isn't how to keep new blood out of our hobby -- we're doing that. (CW is great for that). It is getting new blood **into** our hobby that is the problem. Our numbers are dwindling and our hobby is dying. Is Morse Code worth all that?

20M SSB sounds like an old folks home. Other bands are even worse. The average ham is a retiree who fought in WW2 or Korea. This is good?

As far as I'm concerned, the ARRL, by supporting continuation of the CW requirement, has shown that it has no vision for the future of our hobby, and that it is controlled by a cliquish bunch of old timers. I seriously question whether our hobby can survive if the Morse Code requirement is retained.

I've got one!

But, you are right, I think......much lower production than the A model.

Now for REAL low production, how about a 535B??? To the best of my knowledge, there was only ONE ever made..... And to answer your next question....nope, I don't have it, but I know where it is! ;-)

Fun to see conversation about these old scopes. Best built there ever was. Period. My favorites are the 555, 556, 549 and 547. INCREDIBLE displays that make modern stuff look like it's out of focus..... And tunnel diode triggering that leaves TTL in the dust.

wrote:

>Piracy is theft.

No it isn't, it's piracy. There are some basic differences.

>It raises the cost of software for those of us who
>don't steal.

Prove it. Show me some statistics. You will be unable to do this,
because nobody has ever been able to prove that piracy raises the cost
of software.

>It steals the work of many people.

If the person who pirates a program didn't intend to buy it anyway,
how is the software company losing anything? I don't see it.

>There's no excuse for it at all.
>To defend it is like defending rape. It only makes you look stupid.

False. It makes YOU look stupid to take a simplistic viewpoint that
"piracy is theft." It is a complex issue, and it will never be solved
without realizing this.

Amateur General Classes -Lindenhurst

Subject: Great South Bay Amateur Radio Club Amateur Radio Classes

GENERAL THEORY CLASSES -

The Great South Bay ARC has scheduled Advanced classes beginning
on Saturday January 11, 1997. Classes start at 10:00 AM and
will continue to 12:00 NOON.

The class instructor is Walter Wenzel KA2RGI.

Classes are FREE. All students are required to have the ARRL
General Class Study manual (2nd edition good through June 30, 1998).
Available from the ARRL, 225 Main St., Newington CT 06111.

ADDITIONAL INFORMATION

All classes are located in the basement of Babylon Town Hall,
200 E. Sunrise HWY, Lindenhurst NY in the Emergency Operations Center
(ARES/RACES Room), access is gained via the door at the bottom of the
stairs at the rear of Town Hall.

If you are interested in attending a class or you know someone who is,
contact Walter Wenzel KA2RGI (516)957-0218 for additional information
or just come on down to class.

Information is also available during the GSBARC 2 meter info net every
Monday evening at 7:00 pm on the WB2FKZ repeater, 146.685 -600 4Z(136.5)
PL required. You may also write to:

Great South Bay ARC
P.O. Box 1356
West Babylon, NY 11704

Visit GSBARC online at http://www.li.net/~tomcar/gsbarc.htm

>

Correct - this is the same logic the cellular carriers and landline phone companies use to justify the 'billions' lost to hackers each year. They base the 'losses' on POTENTIAL revenue from system usage. Never mind the 'little' fact that the usage never actually occurred.

A famous Bell South case had the company claiming 'millions' in losses. As it turned out the information they lost was publicly available for $79.00 from a unit in their own company.

It goes to show you any numbers put out by these companies should be scrutinized a LOT more closely ! The methods used to inflate losses would be thrown out by any competent auditor.

The piddly little onesy twosy user - most people on this group, is not the problem. The problem are the operations that counterfeit/copy 1000's or ten of 1000's of software titles at a time, and sell them overseas....

>in the area. Locked the whole system up. THAT's why airlines say cell
>phones are a no-no!

** NOT bloody likely ! .... the coverage angles of the antennas do not favor airborne aircraft. The Nextel system or any cellular system for that matter is 'intelligent' enough to permit only one site at a time to convey call traffic for a particular unit id. It's very remote the helo pilot 'locked up' an entire system. It was most likely some other 'glitch' introduced from the poor coverage afforded by the altitude. Or maybe the system anti-fraud software kicked in, multiple id hits at multiple sites. It could have concluded something 'fishy' was going on and tagged his radio has 'suspect'. Then kicked him off the system.

Cell phones are not permitted in flight for EMI/RFI concerns with navaid compatibility issues. The plethora of FMS, advanced EICAS and FADEC gear on a typical commercial (or buisness) aircraft make such precautions prudent. The airlines couldn't give a rats ass about the cell phone company system. They are more concerned with their aircraft being able to navigate the airspace without incident.

Message-ID: <32E8AEA9.38EE@exit109.com>
Source record: 206439

Hi,

I put up a new page called "WA2WHV QSL WWWALL" at

http://www.exit109.com/~jimh/qslwall.shtml

It's an interesting way to show off your qsl and add a link to your ham page if you have one.

If you send me an image of your QSL, I will add it to the wall. If you include an (optional) URL to your ham page, your qsl image will be a made link to your page.

QSL image is required, link is not, but will be used if included.

I will try to keep all qsls at the correct aspect ratio which will show their various shapes, but at a constant width.

This seemed like a cool idea to try, but if there is no interest, oh well! If the interest is overwhelming, I may have to limit the number for space reasons.

Yes it does. The range is from 67.0 to 256.4 HZ tones. You can have it
set so that the transmitting tone is different than the receiving tone.

>domain.

Or, D) Release it as shareware, but realize that it's mostly a hobby
and it's unlikely you're gonna make much money with it. This is what
most shareware authors do.

As long as we're on the topic of shareware... I would say that 99% of
shareware authors neglect the quality aspect (yes, I mean 99%). In
order to really make some money with shareware, your program has to be
TOP NOTCH, that is, better than most commercial software. The
reason being, of course, that people have a chance to try it before
they buy it, whereas with commercial software they usually don't.
Most REALLY outstanding shareware programs make a lot of money for
their authors.

Several years ago there was a reasonably active coordination group here in NJ called TSARC. Suddenly the clubs I'm in stopped getting the yearly request for dues and the newsletters stopped coming. Attempts to contact the frequency coordinators I knew of were also unsuccessful.

Does anyone know if there is still a repeater coordination body here in northern NJ? I've heard on the air that TSARC is no longer in business.

My immediate concern is getting some updates on my repeaters in the ARRL directory. Will the ARRL accept updates for repeaters already listed from the owners instead of the repeater coordinators?

1841. Balun (inpedance adapter): how?

> Any help? Sigh..

Hi Tony, I would try something simple first. Cores over the 75 ohm coax
will result in a 1:1 balun function and a 300 ohm resistor in parallel
with the 100 ohm balanced load will keep reflections from happening.
This presupposes that you have power to spare in the 75 ohm cable.

1846. HARC Winter Carnival Special Events Station

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-24 00:00:00 UTC
From: jdhaas@mtu.edu
Message-ID: <5cajqq$me8@login.ee>
Source record: 206457

Hello there. I am Jim Haas, KG9IF, QSL/Contest/Awards Manager for the Husky Amateur Radio Club, W8YY, which is the amateur radio club of Michigan Technological University in Houghton, MI. Every year over a festival known up here as Winter Carnival, where everyone takes a couple of days off to enjoy the snow (we get a lot of that up here), we run a special event station. This year's station runs from 1100Z on 30 January 1997 (6:00 AM Eastern) to 1100Z on 1 February 1997.

"So Jim," you ask, "what do I get for working this station?" Well, if you work our station, just send us a self-addressed, stamped envelope suitable for holding a certificate and we will send you just that--a really nice certificate that says you worked W8YY over Winter Carnival.

Below is the frequency list, which is a general guideline and not a promise of where we will be. I can guarantee one thing--if you look around, we will be there. We may not be on, for example, 14.325 exactly, but we'll be on 20 somewhere. We may also do some HF digital modes (we still need a few connectors for that) and some satellite work as well. If there is enough interest among the station ops/control ops, we will work some CW as well.

If you have any questions, comments, or criticisms, just drop me a line at jdhaas@mtu.edu. We look forward to hearing you on the air.

73 de Jim Haas KG9IF

Band Mode Frequency
17 M USB 18.130.0 MHz

20 M USB 14.325.0 MHz
CW (maybe, if
there is 14.130.0 MHz
interest)

30 M CW (if there 10.125.0 MHz
is interest)

40 M LSB 7.262.5 MHz

75/ LSB 3.972.0 MHz
80 M

160 M LSB 1.932.0 MHz

Hi DX mates,

thanks for reading this message, which deals with a software tool
that's gonna help you while DXing.
At last the DXTelnet software pack is available and ready to run.
If you use any telnet application to connect to DXClusters directly
via the Internet, please read what follows: you'll find something
interesting for you.

You can download DXTelnet from:
http://www.funet.fi/pub/ham/hf-work/
file name: DXT10ENG.ZIP, size about 640K

DXTelnet is a DXer oriented, Windows based Telnet application which
finally fixes problems found in traditional telnet applications and
adds unique features to help Power DXers.

DXTelnet Features

*Alerts:DXTelnet can be linked to DXHUNTER 5.2, to get alerts on spots
coming via the Internet

*Aux Comm Port: remote control can be activated via a comm port

*Customizable Colours: set the colours you want on any window

*Customizable Windows Size: hide/show/size the windows as you want

*Easy Text Send: no longer problems with the BACKSPACE key!!!

*Keep Alive: this function fights idle timeouts

*Links To Other Applications: to DXHUNTER or to any other program via DDE

*Macros: up to ten strings can be set immediately with Alt+0-Alt+9 keys

*Multiconnection: this program was born to operate in multisession:
ALL the spots, from ALL the sessions, are displayed in EACH DX window,
without duplications.

*On Line Help: simply press F1 and get context sensitive online help

*Paste TX: send large bulletins in one shot

*Sounds And Voice Spell: even on the PC Speaker!

*Split Screen: TX RX DX TALK ANN are collected in 5 different windows

*Spot Filter: exclude unwanted spots

*Spot Multiformat Support: both Pavillion and Clusse spot, talk, ann formats are supported

*Talk Auto Answer: you can set your own text string to be automatically sent to incoming talks, when you're not in the shack

*Talk Management: review talks in their window or have the talks remarked when operating in multisession or in background

*Text Capture: archive entire sessions or received text portions on files

*Text Search: search for text on any window

*Window Scroll Back: no longer messy results when scrolling any window back

These are the main functions; discover the other ones, by using this unique program.

DOWNLOAD AND TEST IT NOW!!!

At the same site, you can find also the latest release of DXHUNTER (5.2) which can be linked to DXTelnet, to get alerts on needed spots.
The name of the file is DXH52ENG.ZIP, size about 1M
ENJOY!

to contact me:
E-Mail : vmi@vmi.it
Radio BBS address: IK4VYX@I4UJB.IMR.ITA.EU
DXCluster : AC4ET (ex NO4J) between 9 and 17 UTC of working days

As recently we've experienced some problems with the E-Mail server, if you get no answer within 4 days (Mail is not explored on Saturdays and Sundays), please, resend your message.

We're working to make DX softer...
73 de IK4VYX (Fabrizio)

Source record: 206460

The LM 470 tower from TriEx is an excellent crank up tower- Unless you want to exercise your arm a lot I definetly recommend the motorized version. Also get the Erecting base as it make raising the tower possible, and then provides a tilt over feature for future work.

I have had three towers, and if one keeps the cables lubricated and the pulley bearings it will give many years of service

>nations first practical repeater -- K6MYK developed by the late Art
>Gentry W6MEP. When Weiner moved it to Mt. Wilson it took on his
>secondary call sign WA6TDD -- known locally as WA6-Ten-Dozen-Donuts.

Hi Bill,
Don't be disillusioned. I remember when Burt had his rptr on Palos
Verdes in the 60s; it was AM. Sometime in the early 70s the equipment
was changed to FM. Was it still the same rptr? Most would say "yes."
But coupled with a change of callsign, change in location, and change
of ownership everyone would agree that no, the claim of what exists
today is *not* the nation's second oldest rptr.

In contrast, let's look at Art Gentry's rptr: It began in the mid to
late 50s on Mount Lee in the AM mode. It wasn't until the early 70s
that Art did an equipment change and went FM. *But*, the callsign,
ownership, and QTH remained the same. Even today, provisions have been
made to keep the same callsign even though, sadly, Art passed away
a couple years ago (and his sweet XYL, Millie K6JJN, went shortly after;
I can still remember her voice on the taped ID: "This is the Los Angeles
repeater, K6MYK, Mount Lee, Hollywood" when it was still AM in the 60s).

(Note that Art pioneered the concept of running a transmitter and receiver
simultaneously in close proximity within the same band, thus giving birth
to repeaters.)

So again, the claim that what sits on Saddle Peak today is the nation's
second oldest rptr is void due to equipment *and* callsign *and* location
and ownership changes.

>The full story of the early days of both of these pioneering repeaters
>can be found in "The Practical Handbook of Amateur Radio FM and
>Repeaters," TAB Book #1212 -- by Bill Pasternak, WA6ITF and Michael

>Morris WA6ILQ. The book is out of print, but is in many libarries.

I've got the book at my Nevada QTH.

By the way, here's a bit of trivia regarding Burt's "repeater controller" that probably very few people on here would know about. He had a stepping relay attached to the telephone line at the rptr site. He'd call the site, and the number of rings before hanging up would dictate what function would be performed. Now here's the question: At 2300 (his bedtime) how many rings of the telephone would shut down the machine for the night?

Back to you Bill,
Jeff KH2PZ (ex WA6QIJ)

>your name (hell, *I* sure do!), and assumes you're not really a ham because
>you don't sign your call to a note?

Hi Goldstein,
Even if I was a newbie (which, of course, I'm not) you would have failed the task of informing the newcomer in a proper and curteous manner, in keeping with our long tradition of elmering.

Your buddy Hank might be famous in some area that you're interested in, but in 21 years of hanging out in the CW bands and building my own gear, I've never heard of him. Whatever he's done has had no impact upon my building nor my operating. I'm too busy with a hot soldering gun and a telegraph key to idolize anyone in this hobby/service.

I've broken four Hawaii state swimming records, and I was a pretty famous Coast Guard CW op for working a particular maritime disaster, but I wouldn't call you a "clueless newbie" for never having heard of me, for those areas are outside of your interest. (You come across as a very mean-spirited person - it's no wonder some newer hams dispise the older guys.)

Now ol' Hank wants to eliminate some license requirements in order to get more folks on the air - he's using the same line as some of the nocode techs on here who want HF. But then the fellow goes senile and says "Lower the requirements to get more people on the air - we'll teach them how to be hams later." Now Hank should know better than that! He'll recall how it used to be - pass the license test, then the agony of waiting 3 months for the license to arrive. What did we do during those long months? We learned how to become hams by *listening* to QSOs, all the while building a lot of our own gear we'd be operating when the long-awaited license arrived. (I'm all for bringing back the 3 month wait!)

>Hell, I'm almost getting embarassed to have my 1x2 call.

1x2 calls can be bought for $30 these days. Regardless, the format of a person's call was never a reliable method of determining what their building skills were or how good of an operator they were.

>Maybe we should test on building spark coherers. It'll really keep
>the morsians happy.

I would truly like to see test questions covering our long 90+ history;
no newcomer can really gain an appreciation of amateur radio without
having studied the developement of this fascinating field.

Back to you Fred.

>>operated.

Actually, if you can reasonably demonstrate that it is your habit to maintain a written record of your transmissions, a logbook may very well be a competent document relevant to the issue of when you were transmitting. It is not conclusive proof, but it would be most likely be admissible in court.

The basic logic is that you'd not normally maintain a logbook just for use in court, but as a "business record" to help you determine the efficiency of your station, and as a record of your contacts. Thus it would have a fairly high degree of credibility. (You do log unsuccessful CQ,s and "tests," don't you?)

Just don't get caught making one up afterward.

_/ _/_/ _/_/ _/ _/ _/ _/ _/
_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #200 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 31-Jan:
-
1. ARRL Board Meets in Albuquerque, No Support for No-code HF
2. FCC Nominee Withdraws, Will Stay in Present Commission Post
3. Gettysburg May Restart Vanity License Issuance Later This Week
4. Heard Island DX-pedition, VK0IR, Tops 55,000 Contacts
5. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
6. AMSAT Invites Visitation to Phase 3-D Integration Facility
7. Weekly Propagation Forecast
8. "This Week" Seeking Special Feature Producers/Commentators
9. ARRL Committee Proposes New License Structure, Enhanced Tech HF
10. Special Event Station Calendar
11. Video from 1996 World Radiosport Team Chamionship Now Available
12. "The RAIN Dial-up" from Chicago
13. Beeper Madness Strikes as Paging Satellite Goes Haywire
14. Southeastern VHF Society Conference Set for April in Atlanta
-
Funding for the program's transmission and production expense was
provided this week by a grant from the Columbiana County Amateur
Radio Club, which carries "This Week in Amateur Radio" on the
KD8XB repeater in Lisbon, Ohio, serving East Palestine, East
Liverpool, East Rochester, and East Central Ohio on 146.805 MHz.
Presentation of "The RAIN Dial-up" has been made possible by a
grant from Dennis Huisenga, N0LEY, of New Brighton, Minnesota.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm
```

through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA. The service is carried on VHF/UHF repeaters throughout North America and on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

1863. Re: More effective? Hamstick Dipole vs. Folded Dipole

<snip>

In a walk, the full-size dipole, with increasing improvement the lower in frequency you go. Been there, tried them. Don't have actual numbers to report (actual or theoretical), but can say without hesitation that the "U" dipole will outperform the hamsticks on the low bands by quite a margin. Above 20m, you might be at a point where they balance (maybe the hamsticks will win, but at that point, your U dipole won't really need to bent, will it?).

Good luck experimenting!

I have a freight-damaged Kenwood TS-440S in need of a control module, display module, etc. Does anyone have a TS-440S that may be otherwise broken but have working display and control board? Or, can someone suggest a source of parts in San Jose, CA or vicinity?

I have already gotten pricing from Kenwood and Pacific Coast Parts, but am almost at the point of having to replace the whole unit because the cost is so high. I'd really rather get the unit running.

Thanks,

Mike Cunningham

>ham radio.

>So what seems to be the problem with the group that uses the repeater? I
>have yet to see a problem.

I have never listened to the repeater because I have never been to southern California (thank you Lord, Praise Jesus !!). But I did take a look a the website for the repeater, and download some of the .wav files that were supposed to be audio clips from the repeater, someone posted the the web address here a while back.

I doubt most hams have a problem with a little radio fun. Probably what most people have a problem with is the language used, I would guess.

Haven't heard that kind of stuff on HF yet. Maybe because I am not in LA ?
I think the fact that it is on the air stands as a constanst reminder as to how sad the FCC's enforcement branch works......

1869. Re: Thank god for the code

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-25 00:00:00 UTC
From: mc@shore.net
Message-ID: <5cedl0$i5n@northshore.shore.net>
Source record: 206280

A while ago I wrote the following:

MC>The welfare society in which we live has given many people the idea that
MC>they have a God-given right to everything anyone else has.

Wherein Len Anderson (len. anderson@mogur.com) replies:

> The issue is NOT whether you consider yourself judge, jury and
> executioner for breaking your personal beliefs but whether or not
> morse code should be logically, legitimately used as a TEST
> REQUIREMENT by the U.S. government on the basis of that government's
> description of the U.S. amateur radio service.

Where did you get that idea? I have a right to express my opinion just
as you do. I feel that the Code requirement should be kept and hope
that it will be. BTW - I didnt see a call sign (or a signature for that
matter) at the end of your emotional rave .....perhaps I hit a raw nerve,
eh? Do yo have a callsign or are you one of these people who just likes
to post inflammatory messages for kicks and giggles?

MC> Its bad enough
MC>that the exam questions and answers are published - thank Dick Bash for
MC>that! This means you don't have to actually know anything about radio
MC>theory, electronics, etc. All you have to do is be able to recognize the
MC>correct answer. Now, not being satisfied with that many of you want to do
MC>away with the code test.

> If you've been reading rec.radio.amateur.policy (obviously not or
> you'd have posted in there), then you would have had the astounding
> revelation that no-code-TEST advocates want TOUGHER written test
> elements. Now what?

I read that newsgroup as well and I've read no such thing!

MC>As a volunteer examiner I will only participate in Morse Code testing. I
MC>will NOT be involved with testing no code freeloaders!

> Then you are in violation of 97.525 and should have your VE status
> disqualified.

Do you have a license to practice law as well? I conduct Morse tests
as a matter of choice. The VE Team Leader I work with has no problem
with my wishes to do so. Remember I do this as a volunteer on a pro bono
basis (a lawyer like you should know what this means!)

MC> I know my attitude
MC>is kind of retentive but so be it! I accept the no-code Tech license as a
MC>"use-it-or-lose-it" solution but it seems that putting no-coders on two

MC>meter CB doesn't solve the problem. May have been better to stick them
MC>above 220 where their numbers would serve a useful purpose. The HF
MC>portion of the spectrum is crowded enough as it is.

> It's not anal retentive...worse; fascist with a touch of the KKK
> thrown in. ALL U.S. license classes are defined by LAW as are the
> VECs and VEs. You either support ALL or you support NONE. YOU do
> NOT make the law nor do you interpret the law that exists.

Jeez - just because its LAW doesn't mean I have to personally accept it
or agree with provided I don't interfere with it. Now you try to use terms
that have racist and authoritarian inferencess to try to distort my comments.

MC>... So quit your snivelling and whining and spend the same
MC>energy learning the Code. It won't kill you and besides you may just find
MC>it is a lot of fun.

> "Snivelling and whining" and "welfare" and "you have to WORK for it"
> knee-jerk phrases must sound emotionally fulfilling at your end, but
> they betray a closed, dictatorial mindset to all readers, plus
> indications of fear that a beloved fraternal order may change from
> your concept of it and deprive you of some status and privelege on
> the basis of certain tested skills.

ANYONE is free to join this "beloved fraternal order"! Including you.
All we ask is that you do what we did to get in - no more and NO LESS!

> At issue is NOT whether or not morse code or continuous wave is to be
> "banned" but whether or not it has a legitimate reason to exist as a
> qualifying test element in the U.S. amateur radio license
> examination. Such legitimacy has to do with whether or not it fits
> with the law as given in USC Title 47 Part 97. Such legitimacy has
> nothing to do with whether or not you arrive at testing appointments
> clad in a white sheet and armband of opinion, refusing to test
> applicants for a certain license class.

Here we go again (yawn!) with the distortions and fantasies. I only wear
my VE Accreditation badge and conduct the Morse Code tests as provided
by law. There is NOTHING in the law or guidelines that say I HAVE to
participate in the written portion of the test. I also check [people's
ID and make sure their forms are filled out correctly. I do not
differentiate between applicants - I just check paperwork and ID. Which
part of the actual testing I conduct is strictly up to me and the VE
team leader with whom I work.

MC>Anything that is worth having is worth working for.

> Yes it is. In a half-century of adult experience, I and others
> who are no-code-TEST advocates WORKED for many things, WITHOUT the
> closed dictatorial mindset of keeping requirements frozen just
> because they happened to be rewarding to a few individuals. None of
> us show any of the supposed "welfare" attributes that you impugn in
> your note. However, your own little concept of what is "worth"

> working for is in great dispute...which you have not justified on any
> grounds other than emotion.

I'm glad we agree on something here.....the fun and excitement of amateur radio are well worth working for. But those who would lower tha standards and provide actual questions and their corresponding correct answers and eliminate the basic Morse requirement are indeed trying to get something valuable for nothing! Just like welfare! Some members of our society need temporary help if they fall unto hard times. But there are many more who view welfare as a way of life unto itself, not a form of temporary assistance from a caring society. There is provision for code test exemption for those with a genuine medical reason that exempts them from the code test. But, as with the social welfare system there are those who abuse the system - and laugh at those who make it possible!

MC>Asbestos suit donned - flame away!

> You have made your emotional opinion known. Now, we can either argue
> on an issues' merits or we can revert to high school teenism with
> resort to faux-manliness posturing and nyah-nyah commentary. The
> latter is counterproductive for your side since it offers NO
> incentive for newcomers, NO encouragement, merely the curious false
> military attitude of a gang leader. Your choice.

First you will have to drop your rhetorical usage of comparisons such as "KKK", "Fascist" "gang leader" and attempt to learn what they mean! You state that you are a "no-code advocate" - but are you licensed? If you are why did you not include your call? If you are not licensed, why not? Any why are you interested in this in the first place?

Next thing that you no-code advocates will want is to eliminate the CW only portion of the bands and take that over too. And that will be a real shame because its the only part of the bands where most people show some respect for each other. I recall reading here a while ago where a club executive consisting of no-coders actually tried to FORBID use of CW from the club special events station. What will you want next?

Geezuz - where do they come from???????

1876. Code Requirement & Young People on HF

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-25 00:00:00 UTC
From: timw@juno.COM
Message-ID: <19970124.170408.9007.1.TimW@juno.com>
Source record: 206355

I was appalled to see the following message posted to this list (NOTE: This is not the entire message, only the paragraph that caught my eye):

"But hey, that's OK. As the old CW crowd dies off, so will the HF component of our hobby. But that's better than opening up HF to young people, right? We'll just keep that CW requirement, which deters today's smart young people from joining our hobby. Heck, my Grandpappy had to do code to get onto HF, why shouldn't today's computer-savvy young people?"

I am a 15 year old Extra Class, and I have had my license (which was a Technician Plus w/ code) for almost three years; I earned my Extra at age 13. This information is not intended for so-called "bragging rights", but only to point out that there is no reason why code should deter young people from joining the hobby. These shots at young people on HF ("But that's better than opening up HF to young people, right?") should not be tolerated. Young people are the future of amateur radio. As the amateur bands come under fire by more and more agencies wanting OUR frequencies, I think that people should be a bit more cordial to those young people who will be keeping our hobby and service alive on HF as well as VHF and beyond.

>it is more like chirps. Even me in this weekend's contest did not beep but
>chirp, though I sent the code out faster than I am capable of copying it.
>But as most stations were on SSB anyway, and responded on SSB, I must not
>have been too bad at it, as they usually got my part correct.. If I now
>only could copy CW at the speed I can send it ... *sigh*

I think you are right, it is a war between ignorance and knowledge.
Those with knowledge know that chirp is the result of oscillator
pulling, and needs to be fixed. Those with knowledge also know that
there are a number of techniques for working weak signals at levels
where you can't even discern a carrier by ear, and do it error free
at speeds you can only dream of doing via OOK Morse.

Exploring radio technology is fun. It is a voyage of discovery into
the realms of Maxwell and Shannon. Listening for a beep in the roar
of white noise is not fun. And that's not the word of a wannabe, I've
been there, done that, moved on (and my ears still ring at night from
that early abuse, plus the work I did as a teen in a hammer mill).
Radio isn't supposed to be a mystical experience, it is supposed to
be good solid engineering. If you are mystified, study, learn, and
penetrate the fog of superstition with the clear light of knowledge.

I would be pissed by this also, Django.

I have seen guys throw together the little interface (per your design)
and sell the interface at hamfests at a ridiculously high price while
simultaneously "giving" a copy of your Hamcomm with it. Perhaps you
should re-write your license agreement to require a royalty payment
when it is packaged this way.

I don't use your program, but did play with one of the early
versions, and I was really impressed with its quality and usefulness.
I have recommended it to others trying to get started in the digital
modes. I don't know how much it has enriched you, but I am pretty sure
it has enriched Ham radio quite a bit.

I think if I were in your position, I would enjoy the challenge of
including code that the hacker thieves could not break. Also, by
including significant feature upgrades in new editions it should be
possible to stay ahead of the thieves.

Anyway, I hope you continue to contribute to the ham community as you
have in the past. I hope it will continue to be with shareware

versions of your product.

Now, Roger. I am as opposed to the Incentive (to pass faster Morse
receiving tests) Licensing mess as anyone, but you are being a bit
more doom and gloom than is called for here.

There isn't any evidence that amateur radio as a whole is shrinking.
Since the FCC has started expiring the first of the 10 year licenses,
our growth curve has gained the appearance of flattening out, but that's
only because we were counting those dead geezers in prior years. In
fact we seem to be growing at a steady, if somewhat lackluster, pace.
I had hoped we could top the 1 million mark by the turn of the century,
but it looks like we're going to fall way short of that mark.

Now almost all of the growth there has been is in the code test free
Tech domain of course. That's not unexpected. *As a percentage of amateurs*,
General and up are declining, but DUH!, that's exactly what you'd expect.
In terms of absolute numbers, General is virtually flat, Advanced has become
the second largest amateur class, after Tech, and Extra remains the smallest
class, trailing the almost mortibund Novice class. Again, no surprises there,
a result of code speed uber alles.

This does represent a population inversion, however. For decades, long time amateurs vastly outnumbered the relative newcomer. That's no longer so much the case. The relative newcomers are now the largest single class. That's bound to eventually have a political effect, especially since fewer than half show any indication that they intend to upgrade to coded status.

Amateur radio is still overly grey, though that's improved a bit too. Prior to the code test free Tech, average amateur age was 59. It's now down to 52. That's not enough to be healthy, but it *is* better than it was. The oldest class is General, and the youngest class is, no surprise, Tech. Of course HF licensed amateurs are greyer than the average amateur, and much greyer than the Techs. Given the way Incentive (to pass faster Morse receiving tests) Licensing is structured, that shouldn't come as a surprise either. The older generation was more conditioned to follow authority blindly while younger people continue to ask that most embarrassing question, "Why?" in relation to patent absurdities such as Incentive (to pass faster Morse receiving tests) Licensing.

ARRL membership continues to decline as a percentage of amateurs, though it too has grown in absolute numbers by a small amount. I don't have hard figures on this, but it appears that Techs are underrepresented in the ARRL membership. Thus I would opine that the ARRL is also greyer than the average for amateur radio as a whole. That doesn't bode well for the future of the organization. The fact that the BOD minutes show an expected $500,000 deficit for the ARRL, and Stafford's calls for economy measures, would tend to confirm that they're not doing so well.

We know the amateur industry is doing poorly. The demise of AEA was a shock, and Kenwood's abortive turn to truckstop sales also showed a degree of panic. It's hard to know what to make of that. It could be that the older crowd licensed for HF is more reluctant to turn loose of a buck, thus high margin HF rig sales have languished (and stale HF multimode data controller sales must have nosedived). And the cutthroat competition in the VHF+ market has driven margins through the floor. A couple of major 800 number dealers have also folded, attendence and sales at hamfests are down, etc. The industry is in rocky shape.

This seems ironic at a time when amateur demographics are showing a (slight) improvement, and the economy is generally strong. The amateur sector has not shared in the growth which has resulted in record after record falling on Wall Street. Is this blue collar blues, or a case of middle management shakeout? Perhaps we need to take a hard look at the economic demographics of amateurs. Perhaps they are not only greyer, but poorer as well, than their counterparts of a decade or two ago. Perhaps they are mainly bitter white males, passed over for promotion, and too old to change careers.

People have been quick to blame the internet for the decline of amateur radio, but when an earlier one eyed monster sprouted in everyone's living rooms, amateur radio saw its period of greatest percentage growth, IE the coming of TV in the 50s corresponded to the period of most dynamic amateur growth. I think the major difference is that most people in the 50s where enthusiastic about technology, and their future in relation to it, amateurs most of all. Today, it seems that amateurs are fearful and resentful of technology while those in the Nintendo generation are not. Thus amateur radio desn't seem like a natural place for younger technophiles to migrate, but the internet does. Naturally, the Morse Code testing issue symbolizes this division between the technophobe and the technophile.

I think that if amateur radio is in decline, it is a decline of the spirit rather than a physical decline. Amateurs are no longer at the forefront of the technological revolution. Too often, amateurs have become neo-luddites, vainly trying to turn back the clock. We can't go back, that America doesn't exist anymore. We have to go forward. This could be a remarkable time for amateur radio. The technology has become available to revolutionize the way we operate as much as the coming of SSB did in the 50s. There is no question that the future of communications is digital, and without wires. We have the chance, if we don't turn our backs to it, to lead that revolution. If we don't, it will run us over and bury us.

The ARRL is merely voting their pocketbook, since YE OLDE FARTZ...some of the strongest proponents of mandatory Morse hazing requirements that you'll find anywhere...make up the majority of their membership and have strongly expressed the fact that things "stay the way they are."

But what the ARRL doesn't seem to get (yet) is that their membership is, quite literally, dying off. If amateur radio dies along with them, the ARRL dies as well. Continuing the CW requirements assures this will be the end result.

Music? Sending code on an oboe keeping a fixed note wouldn't sound
like music to most folks. You could even try FSK using two notes;
is that music?

The point is that Hank suggested an oboe test in place of a code test;
if about half the HF QSOs were conducted using an oboe his suggestion
might have merit.

>W0RLI OREDSON, HENRY N

Jeff,

His statement may sound strange, but it is 100% correct. The LA .435 repeater is the nations second oldest continuous operation repeater. It started life in April 1959 -- yes 1959 -- as K6OQK -- the call sign of its builder Burt I. Weiner and was based on the design of the nations first practical repeater -- K6MYK developed by the late Art Gentry W6MEP. When Weiner moved it to Mt. Wilson it took on his secondary call sign WA6TDD -- known locally as WA6-Ten-Dozen-Donuts.

The full story of the early days of both of these pioneering repeaters can be found in "The Practical Handbook of Amateur Radio FM and Repeaters," TAB Book #1212 -- by Bill Pasternak, WA6ITF and Michael Morris WA6ILQ. The book is out of print, but is in many libarries.

As to the 1990's. What N6UZS did not tell you is that the .435 repeater of today is not the same operational format of the '60's and '70s. It used to be a respectable but fun repeater. Today it is neither. It has deteriorated to a festering cancer that in my opinion -- needs to be excised from ham radio society.

If it is really up for sale, maybe someone from Ne Zealand or China will buy it -- and take its problems away from this region.

de WA6ITF

Pat...

The last I heard -- about 3 monts ago -- Tom Rafielli (SIC?) was still running it. I also saw a nice piece about TSARC's recent accomplishments in the December issue of the "BEAR Facts" Newsletter of the ABC Television Network Employees ARC. Ill e-mail Mendelsohn and ask him if TSARC has gone under.

>Explain how this differs from amateur radio, and why.

I love a soft pitch.

The differences are easy to delineate. The Citizens Band Radio Service (Class D) is a personal communications service limited to low power Type Accepted AM or SSB voice radios on 40 channels in the 11m band. It is not to be used for radio experimentation, and has no training purpose. It is intended to allow non-technical people to freely intercommunicate by radio.

OTOH, the Amateur Radio service is chartered to provide a non-profit voluntary experimental radio laboratory for exploring the properties of radio propagation, advancing the SOTA of radio communications, and for lifelong technical self-training. Type Acceptance of equipment is not required, repair and construction of radio equipment is strongly encouraged, and experimentation with new methods and technologies across a broad spectrum from MF to SHF is a primary service objective.

Because amateurs are encouraged to experiment with radio technology, they are required to demonstrate knowledge of radio technology fundamentals in order to be licensed, so that they won't pose an undue hazard to themselves or to others with which they share the spectrum. Because CBers are *forbidden* to tinker with radios, they are not even required to be licensed at all.

The two services have in common a goal of providing public service and emergency communications (all radio services are charged to provide this latter function in time of emergency, CB has REACT and amateur radio has ARES as formal public service and emergency operating groups, broadcast services have EAS, and the cellular service has 911). There is also some nattering about goodwill which neither service provides in practice to any noticable degree.

So there you have it, the amateur service is an experimental technical service with a self-training emphasis, CB is not. CB is for non-technical people who just want to keep in touch with others, IE friends, family, neighbors, etc, via radio. To a large extent, the cellular telephone and the pager have replaced CB as the personal radio service of choice for non-technical people.

This has left CB to devolve into the domain of pseudo-technical pseudo-rednecks attempting a poor (and sadly sometimes all too painfully recognizable) emulation of the worst aspects of amateur radio operation. CB has its "skip-shooters", amateur radio has its Dxers (have you listened to 14.150 today?). CB has its "footwarmers", amateur radio has its Texas Kilowatts. CB has its "sliders", amateur radio has its "radio mods". CB has its foul mouthed racist bigots, amateur radio ditto. CB has its wannabe broadcasters, amateur radio ditto. Most of the worst aspects of amateur radio have a mirror in the wannabes on CB who are trying so hard in their pitiful way to be just like the big boys with the big toys.

Amateur radio remains unique in authorizing private citizens to experiment with radio technologies. This is the hook on which we have to hang our hats to justify our existence as a radio service distinguishable from CB, GMRS, cellular, etc. We won't make it declaring a "Year of Public Service" (though that won't hurt), we won't make it boasting about creating international goodwill (especially when we make a chaos of a band with our gaming), and we most certainly won't do it by impressing the radio world with our Morse prowess. They've been there, done that, moved on.

AX2WI Broadcast for 26th January, 1997

AX FOR AUSTRALIA DAY!

A reminder that the A X prefix can be used all day today and Monday. Remember that if you use the AX prefix, your DX and local contacts may expect a QSL card with the special prefix.

TRASH & TREASURE SALE

Because the last Sunday in January falls on Australia Day this year, the January Trash & Treasure Sale is being held on the First Sunday in February - that's the 2nd of February.

--Submitted by Eric Fossey VK2EFY - Divisionai Secretary.

NEW DIVISIONAL OFFICE HOURS

Until further notice, the office will be closed on Monday evenings. Opening hours on Saturdays have been changed; the office will now be open on Saturdays from 9am to 12 noon.

DIVISIONAL ELECTIONS

The Elections for the 1997-1998 Council of the Wireless Institute of Australia New South Wales Division will be held in association with the Annual General Meeting on the 19th April 1997.

Nominations for the council are now open and they will close at 12 noon on Saturday 8th March 1997. The Divisional Office will be open that day as well as it's normal opening hours, which will be given elsewhere in the broadcast.

Nomination forms are NOW available from the Divisional Office.

A special note for members.

Only ordinary members and honorary life members are eligible to vote in the forth coming ballot. Associate members are not eligible to vote in the ballot. An ordinary member is one who holds a "Certificate of Proficiency" of any level. An associate member, is one who does not hold such a "Certificate of Proficiency" - commonly called a shortwave listener.

So any members who have doubts about their membership status are invited to contact the Divisional Office to confirm their membership status.

The Office's telephone number is (02) 9689-2417
The office's fax number is (02) 9633-1525

The Office's free call number is 1800 817-644
The Divisional Office's address is
109 Wigram Street Parramatta
P.O. Box 1066 Parramatta N.S.W. 2124

--Peter O'Connell VK2EMU, Divisional Returning Officer

DIVISIONAL EXAMINATIONS

The next examinations will be held at Amateur Radio House Parramatta on Sunday 16th February 1997. Candidates who have lodged applications are requested to report at 12 noon, and the exams will start as soon after that time as possible, but no later than 12.30 pm.

Please apply to the office for the necessary forms. Applications close on Thursday 6th February. Acceptance cannot be guaranteed for any applications received after that date.

-- Eric Fossey VK2EFY Divisional Secretary.

WICEN NEWS

A new addition to the calendar is the Wyangala Triathlon, in the Orange area, to be held on Sunday 16th March; enquires are directed towards Robert VK2ZRJ.

The Central Coast meeting is on 14th of March, followed by the VRA Mid Year Conference, at Wombeyan Caves, on the weekend of 22nd-23rd March.

Over the weekend of 19-20th April is the Watagan Mountains Car Rally, for which Andy VK2XRX is the contact; around 20 people are required for this exercise.

Events further away include the Hawkesbury Emergency Expo, run by Alan VK2YYJ, over 16th-18th May; the Hawkesbury Classic Paddle is organised as usual by Kevin VK2CKD over 18th-19th October and the annual Bungonia Cave Rescue will be on the weekend following, over 25th-26th October.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If there are any other regular nets then we'd like to hear about them.

WICEN (NSW) has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It is generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics, and contains pointers to many emergency-related pages likely to be of interest.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

LITTLE LEOS LOOK TO AMATEUR 2 METRE BAND

In their effort to secure spectrum space that includes the 2-meter and 70-cm ham bands, the Little LEOs have narrowed their focus on 2 meters to the 146 to 148-MHz segment. The industry also appears to be attempting to reposition itself as a potential emergency communication adjunct to ham radio.

The little LEOs will use low-Earth-orbiting satellites to provide position-location and two-way data-messaging services to potential customers around the world. Customers would use small, inexpensive transceivers to communicate with satellites. According to the FCC, potential uses of thisservice include emergency location in remote areas, environmental data collection, vehicle tracking, and time-sensitive business and personal data communication.

For Region 1, a draft little LEO frequency allocation table has proposed adding a primary mobile-satellite allocation of 146 to 148 MHz to the existing allocations for fixed and mobile (except aeronautical mobile [R] services). The table was contained in a working paper--Document IWG-2A/86 Rev. 3, entitled "New Allocations for the Mobile-Satellite Services Operating Below 1 GHz"--submitted by representatives of the Little LEOs industry to Informal Working Group-2A (IWG-2A) January 7.

The 146 to 148-MHz segment is not a ham band in Region 1, but in Regions 2 and 3, a footnote would be added to state: "Additional allocation: the bands 146-148 and 430-440 MHz are also allocated to the mobile-satellite service, limited to non-geostationary satellite systems, for use only during emergency communication situations as a complement to the amateur service in accordance with Resolution No. 640."

The little LEO proposal also calls for a new primary allocation for the mobile-satellite (space-to-Earth) service for 430-440 MHz in Regions 2 and 3 (ham radio is primary in Region 1), and offers this rationale. "The allocation for the mobile-satellite service within the bands allocated to the amateur service is intended to be a complement to that latter service in situations involving emergency communications as provided for the [sic] Resolution No. 640."

As currently drawn, Resolution 640 covers only the 144 to 146-MHz segment of 2 meters and does not apply at all to 70 cm.

In the 440 to 450-MHz band, where the Amateur Service is not listed in the international table of frequency allocations except by footnote (ham radio is secondary in Australia, the US, Jamaica, the Philippines, and Canada), the little LEOs proposed a new worldwide primary mobile-satellite (space-to-Earth) allocation.

Calling their service "inherently global" the little LEO group said the industry needs "frequency allocations that can be used anywhere in the world," for nongeostationary, nonvoice mobile satellite service through the year 2002. "ITU-R studies indicate sharing is possible," the industry said.

"If the demand for Little LEO spectrum cannot be satisfied by allocations that could be used on a worldwide basis, one solution is to assign different frequencies for use in the various regions of the world from within the allocations to the mobile satellite service," the working paper's preamble said.

Little LEO firms CTA, E-Sat, Final Analysis, GE Starsys, and LEO One submitted the third revision of the lengthy paper--which drew criticism from the ARRL as well as from military and land-mobile interests and the National Telecommunications and Information Administration--at the January 7 session. The ARRL continued its objection to the inclusion of amateur bands and to the misapplication of Resolution 640. For now, Document IWG-2A/86 Rev. 3 is tabled, but it's expected to come up again at future meetings. IWG-2A meets on January 21 and February 4.

Overall, the little LEOs proposed the following bands for additional allocation to nongeostationary data-only mobile satellite service systems: 138-144, 146-148, 149.9-150.05, 150.05-156.7625, 380-387, 387-390, 390-399.9, 399.9-400.05, 400.15-401, 430-440, 440-450, 470-608 and 614-806 MHz. The paper notes there are proposals concerning 401-406 and 450-470 MHz and for feeder links at 1390-1400 and 1427-1432 MHz in other papers, and that "additional allocation proposals are under construction for the 174-230 MHz band."

For additional information on the little LEOs situation, read the editorial "It Seems to Us . . ." in by ARRL Executive Vice President David Sumner, K1ZZ, in February 1997 QST.

HEARD ISLAND IS ON THE AIR!

"Go and get them, fellas!" With those words of encouragement (if any were needed) via the Internet, John Devoldere, ON4UN, sicced the madding crowd on VK0IR on Heard Island. At 0645 UTC on January 14, VK0IR hit the bands (four of them at first) running. The long-anticipated start of HF operations followed the team's on-schedule landing on the island late Saturday, January 11. In just about two days of operating, the VK0IR team managed to work 12,000 stations --most of them in Japan, Europe and the Eastern US. Operators will give priority to openings into the Western US.

Two high-power operating positions apiece are set up in two radio tents. A storage tent will house a fifth high-power station that will be used mostly on the low bands. As of January 15, four stations were on the air. VK0IR also was operating via Oscar 10. The team was not on 80 meters the first night (January 14-15), because of interference from the 40-meter station. VK0IR was on 80 meters for its second day of operation, but high winds have prevented installing a vertical antenna for use on 75-meter SSB, so there's been no operation there.

Here is the general announced schedule of bands, modes and operating frequencies (subject to change as conditions dictate) for VK0IR. VK0IR operators will work split, but at some point later in the DXpedition, they may invite calls on their own frequency. Twenty meters is expected to be the

"bread-and-butter" band for VK0IR. More operating details and frequencies for subbands (Novice, VHF, etc.) and specialized modes are available on the Heard Island home page, http://www.ccnet.com/~cordell/HI/. VK0IR also has been active on OSCAR-10.

CW RTTY SSB

28.024 28.475
24.894 24.945
21.024 21.085 21.295
18.074 18.145
14.024 14.085 14.195
10.103.5 10.140
7.007 7.047.5
7.022 7.030
3.507 3.799
3.522
1.826.5

Given the short duration of the DXpedition and the intense pressure to work VK0IR from around the world, the team is asking stations to follow its guidelines for working Heard Island. Operators typically will announce the split (eg, "QSX 5" or "up 5") and have been sending QRZ or TU as an invitation for stations to call. Stations should refrain from tail-ending and from calling while VK0IR is working another station. VK0IR typically will listen up 5 kHz from its transmitting frequency, but reports from stations working the team suggest that splits might be wider than that on some bands and modes.

A serious problem with the PACSAT setup on Heard has meant that VK0IR logs cannot be forwarded via that route. ON4UN reports that team members are trying to come up with a way of sending the logs via commercial satellite and e-mail, but as of January 17, this was not operational.

Provided it can get in touch with the team. Radio Austria International will attempt to interview the Heard Island team via satellite telephone. The interview is scheduled to be broadcast this weekend. RAI broadcasts to North America at 0000-0300 UTC on 7.325 MHz; 1100-1400 UTC on 13.730 MHz and 0500-0700 UTC on 6.015 MHz (via a Radio Canada International relay in New Brunswick, Canada). Check the RAI home page at http://www.ping.at/rai/.

The VK0IR team expects to leave Heard Island at month's end. On the return sail, the team will stop at Kerguelen Island "for about one day," according to John Devoldere, ON4UN. He said the chances of any Kerguelen operation are "minimal."--digested from the Heard Island reflector.

NONAGENARIAN NOVICE

Derward Day, KC8FPJ, of Northville, Michigan, recently obtained his Novice ticket at the age of 91, demonstrating it's never too late to take up a new hobby.

--from The ARRL Letter Vol 16 No 3, published by the American Radio Relay League

DX NEWS

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, Stephan, N2MAU, 425DX News, the DXNS and Contest Corral from QST. Thanks to all.

VIETNAM, 3W. Rolf, SM5MX, is QRV as XV7SW and has been working the US West Coast on 160 meters. Please note that 1827 kHz is his only permitted frequency. He will be QSX on 1824 kHz. QSL to SM5MX.

GEORGIA, 4L. Al, 4L5A, will be very active in the CQWW 160 Meter CW Contest. He will be QRV mainly on 1820 kHz. QSL via IK3HHX.

MADAGASCAR, 5R. Maurizio, 5R8FH, is a lay missionary in Madagascar and is active on 20 and 15 meters. QSL via I1PIN.

UGANDA, 5X. Gus, 5X1D, will return to Uganda at the end of January. He will try 2 meter EME operation, running 500 watts into a 17 element yagi. He might be QRV on 160 and 80 meters, but his efforts will be centered on 6 and 2 meters. QSL via SM0BFJ.

ARMENIA, EK. EK6GC is active on 160 meter CW. He will also be active in the CQWW 160 Meter CW Contest. QSL to PO Box 25, Charentsavan, 378562 Armenia.

ANTARCTICA. ZL5ANT is reported QRV from Scott Base on 40 meter CW around 1600 to 1700z. 8J1RL is QRV on 40 and 20 meter CW from Showa Base. CE9OH is QRV from O'Higgins Base at 2300 to 0200z.

INDONESIA. Tjok, YB0RX, states the IOTA Dxpedition to Tukang Besi Islands has been rescheduled for March 1997. They will use the callsign 8B8WI. 8B8KB, worked on 40 meter CW and other frequencies, was a PIRATE.

ARUBA, P4. Brian, NX9O, and Anna, N9KHC, will be QRV as P40X and P4/N9KHC, respectively, using a wire antenna flown from a kite. Brian will also be QRV in the UBA SSB Contest and the CQWW 160 Meter CW Contest.

CAYMAN ISLANDS, ZF. Bruce, W6OSP, and Joe, WA6VNR, will participate in the CQWW 160 Meter CW Contest as ZF2QM. QSL to W6OSP.

--American Radio Relay League DX Bulletin 4, January 23, 1997

SOLUTION TO ABC_FM RADIO PROBLEM HARD TO FIND

Attempts to find a solution to a technical problem affecting the delivery of ABC FM radio services transmitted by the National Transmission Agency (NTA) from its site on Mt. Cenn Cruaich, east of Coonabarabran, will continue for some time yet.

A spokesperson for the agency said recently that all four ABC services broadcast from the site - Classic FM, Radio National, Regional Radio (2CR

Western Plains) and Triple J, were operating at reduced power levels - down five kW from 20 kW.

"This should not degrade reception of these services, except on the outer limits of the signal coverage area," the spokesperson said.

The Mt. Cenn Cruaich facility covers the Central Western Slopes including population centres of Coonabarabran, Narromine and Dubbo.

The spokesperson said the problem centred on overheating that tended to occur in cables sending the signals from NTA transmitters to an FM transmit antenna. The same problem was occurring at several transmission sites in the NTA's Australia-wide network.

The power reduction had stopped the overheating occurring, but was not a final solution.

"We will continue to search for the cause of overheating, but we don't have an answer yet," the spokesperson said.

"In theory, nothing is wrong and the antennas are not overloaded. But in practice, some unknown effect is increasing the heating of the antenna systems beyond their design capacity. If allowed to continue, burning and ultimate failure could occur."

--Coonabarabran Times, 23 Jan 1997, via Ken Westerman VK2AGW

CLUB NEWS

HORNSBY & DISTRICT ARC.

Tuesday the 28th is just around the corner, and that's the night the Hornsby & District Amateur Radio Club is holding an Open Night. It is at the Mount Colah Community Centre, Pierre Close, Mount Colah, near the Eastern entrance to the Railway Station, and commences at 8.00 pm.

There will be an Amateur Station operating on the night, with ATV, Packet Radio, HF radio etc, If you require more information, please contact John VK2WRT by phone on 9807 2490.

Remember the training classes start in mid-February. For further information on these, please ring the Education Officer, Tony VK2BTL on 9487 2490.

Should you wish to know more about the Club, or its activities, please write to:- H.A.D.A.R.C at Post Office Box 362, Hornsby 2077, or contact the Publicity Officer, John on 9807 2490.

Remember the Club Net is on Monday nights at 8.00 pm on VK2RNS. The frequency is 147.250 with a positive offset. Why not join in? All are welcome.

--Submitted by John W Turner VK2WRT - Publicity Officer.

THE BLUE MOUNTAINS AMATEUR RADIO CLUB INCORPORATED
WOULD LIKE TO ADVISE ALL LISTENERS THAT THE CLUB MEETS
ON THE FIRST FRIDAY OF EACH MONTH (EXCEPT JANUARY) AT
THE SPRINGWOOD HIGH SCHOOL LOCATED ON GROSE ROAD
FAULCONBRIDGE.

DIRECTIONS TO THE VENUE CAN USUALLY RE OBTAINED BY
GIVING A CALL ON THE CLUB 2 METRE REPEATER ON 147.050 MHZ
(+600 OFFSET).

THE MEETING STARTS AT 8.00 PM.

THE NEXT NEETING, TO BE HELD ON FRIDAY THE 7th OF
FEBRUARY, WILL SEE BARRY VX2KVK TALK ON ALTERNATIVE
ENERGY AND THE VARIOUS WAYS IT CAN BE GENERATED AND
UTILISED.

THE USUALL TEA, COFFEE AND SCONES WILL BE SERVED DURING
THE COURSE OF THE MEETING.

THE FIRST MOBILE FOX HUNT FOR 1997 WILL BE HELD THE
FOLLOWING FRIDAY THE 14TH 0F FEBRUARY.

FOXES RUST BE READY TO DEPART PROM THE INTERSECTION OF
GROSS RD AND CHAPMAN PARADE FAULCONBRIDGE AT 8.000 PM.

MORE INFORMATION AND DIRECTIONS CAN BE HAD BY CALLING
EITHER ADRIAN VK2BFN, ALAN VX2YYJ OR ALEX VX2ICL ON THE
BLUE MOUNTAINS CLUB REPEATER ON 147.050 MHZ +600 OFFSET.

ADRIAN CAN ALSO BE CONTACTED ON 047 586 797 OR 015 108 504.
ALTERNATELY, YOU COULD COME UP ON THE WEEKLY CLUB NET
HELD EVERY WEDNESDAY AT 8.00 PM ON THE CLUB REPEATER
147.050 MHZ.

-- Alan Whitemore VK2YYJ, B.M.A.R.C.I. PUBLICITY OFFICER

GREETINGS FROM THE MEMBERS OF THE MID SOUTH COAST
CLUB! OUR NEXT QUARTERLY SOCIAL GATHERING AND ANNUAL
GENERAL MEETING IS TO BE HELD AT HANCOCK'S "H RANCH",
LITTLE FOREST ROAD MILTON, ON SATURDAY 1ST FEBRUARY
1997.

TO REACH THE RANCH, TURN OFF THE PRINCES HIGHWAY 3KM
NORTH OF THE HISTORIC VILLAGE OF MILTON AND FOLLOW THE
SIGNS.

WE LOOK FORWARD TO A GOOD ATTENDANCE. THE SITE IS A
SPECTACULAR ONE, OUR SOUTHERN HOSPITALITY IS FAMOUS
AND WE WELCOME VISITORS.

ARRIVALS ARE FROM 10.30 HRS ONWARD. BRING YOUR FAMILY
AND YOUR LUNCH. THE CLUB PROVIDES THE TEA, COFFEE, ETC.
BARBECUE FACILITIES ARE ALSO AVAILABLE.

--FROM DAVID VK2CX, CLUB SECRETARY.

AUSTRALIAN AMATEUR TELEVISION CLUB

THE NEXT MEETING OF THE A.A.T.C. Inc WILL BE HELD AS USUAL ON THE 2ND SUNDAY OF THE MONTH IN FEBRUARY AT 109 WIGRAM ST. PARRAMATTA 1.00 PM

SPECIAL NOTICE TO ALL MEMBERS THE NEW 23cm ATV/SATELLITE rx WILL BE AVAILABLE IN LIMITED NUMBERS, THIS HAS FULL TWIN CHANNEL DEMOD THE NEXT BATCH WILL NOT BE AVAILABLE UNTIL WYONG, S0 BE EARLY !!!

THE TECHNICAL DISCUSSION WILL BE ABOUT THE NEXT RX. ALSO A CHIT CHAT ABOUT THE NEW STANDARD TO BE ADOPTED IN THE CLUB REGARDING ATV ON THE INTERNET, RE USA, U.K, EUROPE ETC. COMMENTS ARE WELCOME, TO GET A STANDARD ORGANISED. (WHERE ARE YOU CADE ?)

WYONG TO BE DISCUSSED, FORMAT, TIMINGS, MANNINGS ETC. THIS MEETING 1S AS USUAL OPEN TO ANY PERSON (OR AMATEUR) INTERESTED IN AMATEUR OR SATELLITE T.V. NOTE: WYONG IS ON FEB 23 1997, 4 WEEKS AWAY - BUT WHO's COUNTING.

FOR MORE INFORMATION ABOUT ATV. CONTACT BOB THE PUBLICITY OFFICER ON (02) 9587-3491 DURING NORMAL CIVILISED TIMES.

--A.A.T.C. Inc. Publicity Officer Bob Barnes

VHF DX GROUP

THE VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR GENEROUS ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE.

VHF DX GROUP MEETINGS ARE HELD ON THE THRID TUESDAY OF EVERY SECOND MONTH. THE FIRST MEETING OF THE GROUP FOR 1997 WAS HELD LAST TUESDAY, JANUARY 21 AT AMATEUR RADO HOUSE, PARRAMATTA.

AT THE MEETING WE DETERMINED OUR ACTIVITY PROGRAM FOR 1997, AS FOLLOWS:

MARCH LECTURE ON AIRCRAFT ENHANCEMENT PROPAGATION

MAY WORKSHOP ON TEST EQUIPMENT AND CONSTRUCTION TECHNIQUES

JULY FILTER CONSTRUCTION

SEPTEMBER COMPONENTS AND PARTS SOURCES AND PROCUREMENT

OCTOBER TO BE ADVISED

--SUBMITTED ON BEHALF OF RICHARD SOULIE, VK2ARS

ORANA REGION AMATEUR RADIO CLUB MEETING

The bi monthly meeting of the Orana region Amateur Radio Club meeting
will take place in the Scout Hall Talbragar Street Dubbo this Thursday 30th
January at 8 PM

-- NSW Affiliated Clubs Officer, Ken Westerman VK2AGW.

For those who use.. or try to use the Fishers Ghost PMS, it has been
relocated to another frequency..144.925 .. This being done so many of our
members and potential users who are unable to access the system now
have the availability to do so by using the ROSE Network.. VK2RHR is
also on the frequency.. All are most welcome to drop into the system, as
the club is always happy to receive reports or information on how it can be
improved...

Commencing on Monday Evening the 10th of February at 7:00 pm ..Jack
Heath VK2DVH will be commencing a projects night program at the club
rooms. This will be for an 8 week duration and will be on each Monday
evening for those wishing to build or learn more about building and
repairing projects..The projects evening will commence at 7:00 pm and
finish around 9:00 pm... If your keen on....or want to learn more about
home brew (NOT BEER But RADIO) then this is for you..

On Sunday the 1st of February the clubs Education division...Headed by
Les VK2TJ....will be holding a meeting for persons wishing to upgrade or
wishing to obtain a licence in Amateur radio... The reason for the
Sunday? Some of us are unable to make classes on the Wednesday
evenings at 7:00 pm. If a reasonable response is obtained for the Sunday
classes... then it will be an ongoing practice..

If someone you know wants to study for a licence, or an upgrade then
please let them know..

The Club rooms are located at the Campbelltown High School
Chamberlaine St Campbelltown... Visitors and New members always

welcome...

--Jim VK2LJZ, Club Secretary

COMING EVENTS

Now, a summary of upcoming events of interest to members and other
Radio Amateurs and Shortwave Listeners...

***** NO TRASH AND TREASURE SALE TODAY ******

Heard Island Dxpedition.....on now
VK Amateurs may use the "AX" prefix.....Today and Monday
Ross Hull Memorial VHF-UHF Contest ends.....Today
First ANARTS broadcast for 1997.....Today
Hornsby & District ARC Open Night.....Tuesday
Orana Region ARC meeting.....Thursday

FEBRUARY

Mid South Coast ARC.....Saturday
Trash & Treasure Sale (postponed from January).....next Sunday
Applications for Divisional examinations close.....6th
Blue Mountains ARC meeting.....7th
Dural Committee meeting.....9th

Sydney six- and seven-digit numbers stop working (make them eight digit
numbers by adding ⍰9⍰ or ⍰91⍰ in front).....9th

Summerland ARC Annual General Meeting.....9th
Gladesville ARC meeting.....10th
Blue Mountains ARC Fox Hunt.....14th
Divisional examinations.....16th
Fishers Ghost ARC Annual General Meeting.....18th
Waverly ARS meeting.....19th
Manly-Warringah Radio Society lecture night.....19th

If you would like to submit a news item for inclusion in the weekly
broadcast, please send it to us by one of the following means:

by post to the Divisional Office, PO Box 1066, Parramatta NSW 2124;
by fax to (02) 9633-1525;
by packet radio to BCAST@VK2WI.NSW.AUS.OC, or
by Internet e-mail to wiansw@sydney.dialix.oz.au

Please note that the deadline for news items is 2pm on the Friday
preceding the broadcast; if submitting news items by packet or internet,
please allow for forwarding delays in the network.

If submitting printed copy, please:
submit your news item on A4-size paper;
double space your text;
write on one side of the paper only, and
use a plain font such as "Arial" or "Helvetica", 12-point or larger. This is

especially important if sending your news item by fax.

Please avoid using abbreviations and shorthand, check your spelling, grammar, and punctuation, and use the exact words you wish the announcer to say on-air. Remember, the more care you take in preparing your news item, the better the announcer will read it.

BROADCAST ROSTER

Next Sunday, 2nd February, 1997

Morning:
Announcer: Geoff VK2EO
Engineer: Peter VK2JPJ
Evening:
Announcer: Tony VK2DJW
Engineer: Brad VK2QQ and Bernard VK2IDS

1902. The LA Animal House/Farm repeaters (1976-1984) revisited....

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-25 00:00:00 UTC
From: mc@shore.net
Message-ID: <5ccnfm$6mc@northshore.shore.net>
Source record: 206381

I remember the SoCal repeater scene circa 1976 - 1984 as I spent a lot of time out there.

The "slime" as they were called inhabited three different repeaters over that time frame - 147.435 Mount Wilson, and 146.61 come to mind immediately.

It is true that the content could be politely considered "X-rated". I found some of it quite entertaining and some of it quite disgusting whereupon I would turn my radio off or change to another repeater. However I soon learned that all was not what it appeared - the hostility and insulting transmissions were in many cases put-ons - or as they were called, "shows". This became quite evident when I started attending some of the local flea markets, notably TRW and saw that these people got along quite well in person.

During the time frame mentioned above I remember "shows" by characters like WA6LEB, ex-WB6JAC, WA6SUD, WA6GVG, K6PXA, WA6LTQ and many more. I have quite a lot of tape of this and it still is interesting to listen to almost twenty years after the fact.

I read and hear a lot about Richard Burton, ex WB6JAC/WB6YIO/KF6GKS. I do not condone his activities. But I would like to recall my first contact with him back in January 1978 or 1979. I had just arrived in Los Angeles and my power supply crapped out. I got on the Mount Wilson repeater to try to find a ham near where I was staying in Studio City that might loan me a VOM to find out what had crapped out. Richard not only offered to help - he loaned me a 12V power supply and insisted on fixing my supply, refusing any conpensation except to share a pizza with me. This was before he ran into the problems with the authorities that resulted in his notoriety and imprisonment later on.

In the early 1980s Arnie K6PXA edited the "Free and Open" newsletter which was very amusing and entertaining. I still have my copies and read themagain on occasion. Also there was the famous .61 record.

Another significant anecdote - I rememebr several conversations between Richard and Ed WA6LE-and-a-BEER that sounded pretty hostile to the point of fisticuffs. Well, when Richard went to Federal prison in Lompoc CA who but his old on-the-air enemy visited him regularly?

My understanding of the situation was that the FCC was instructed to clean up the VHF scene in 1984 prepatory to the Summer Olympic Games.

Last time I visited LA (1994) and experienced the Northridge quake the scene was different. The action on 147.435 was not entertaining any more and I turned it off.

I know that to many the SoCal "slime" gang is a blight on the hobby and the area in general. But I always held the philosophy that if you don't like what you hear, turn the radio off or QSY. Every major metropolitan area has its VHF outlaws - anyone listened to the repeaters in England lately? But as long as that element has a place to hang out free and open it keeps them off the other repeaters where such activity is neither condoned nor welcome.

Only if learning the code is something they like to do.

If you buy into that idea of hobby, you have to buy into it
the whole way.

>passed all the tests up to and including Extra on the first night.

Are you sure?

Here's an example of the kind of question that might be on an
open book exam.

Given: you are operating a 50 watt GMSK transmitter on 14.075 MHz
with multitone FSK at a basic baud of 31.5 and receive a complaint
that you are interfering with a Forestry Service radio net. Would
you;

A) Reduce deviation
B) Reduce baud
C) Install a filter as in fig 1
D) Install a filter as in fig 2
E) Tell them to buzz off because amateur radio is primary on 20m

fig 1 fig 2
---||---x---||-- ---x---)))---x---
| | |
) = =
) | |
_|_ _|_ _|_
/// /// ///

Now the books you may have open are CFR47, The Radio Amateur's Handbook,
ITT Handbook for Radio Engineers, CRC Math Tables, etc, but *not* a Q&A
manual.

Ok, that was a gimmie. It is obvious that if you are interfering with a
Forestry Service net (FM low band, you looked in the table of allocations)
you have a 3rd harmonic problem, so the answer is D. Now you've measured
your 3rd harmonic and find it only 22 db down from your fundamental signal.
Calculate the component values for the filter so that you'll meet FCC spectral
purity limits, using standard capacitor values.

Ok, that's a gimmie too, just look in CFR47 for the limit, then look
in the Handbook's table of standard component halfwave filters for one
with enough attenuation, and copy out the numbers. Hmmm, maybe you would
pass on the first try after all. But I think we'd know that you'd be
prepared to handle the same situation in real life, and that's what the

tests are supposed to show.

Which still has nothing to do with the rec.radio.shortwave topic. But while you're raising awareness, let me suggest another bit of awareness that needs to be raised: Most shareware is worth exactly what you paid for it BEFORE you registered it! For years I've watched shareware "authors" whine and complain that there are lots of downloads of their files, but almost no registrations. When I've looked at the software written by the whiners it has become abundantly clear that spending 32cents to mail in a registration would be overpayment! Their "software" gets quickly deleted from my computer. There are some exceptions, of course. But you won't hear or see the authors of the exceptions whining. They're too busy driving to the bank to deposit the registration fees.

Chiron: Don't feel bad! Most of the modern texts do a terrible job
of explaining how simple VSWR measuring equipment actually works.
These devices are very simple in their construction, but understanding
their function requires some study of the physics involved.

Take a look at the February issue of the American magazine "73 "
There is an article there. Also, see if you can get someone in a
local amateur radio club to provide you with the August 1965 issue of
QST magazine. I know this may be difficult where you are. Let me
know if you need help.

As I recall, the Egghead store near me (now closed) had a shrink wrap
machine in the back. You can guess what happened to those returns...

Howdy i@toke. No antenna "gets" gain since you can't get more out of an antenna than you put into it. You can however, change the pattern of radiation with regard to direction and angle, hence gain relative to a "standard" antenna. The "standard" being a dipole, 1/4 wave, or a theorical antenna termed an isotropic radiator which radiates equally in all directions. Thus "gain' is expressed as decibels relative to a standard. For verticals "gain" is achieved by lowering the angle of radiation so that more energy is directed to the horizon instead of straight up in the air. For your vertical project you may want to try a 5/8 wave, J-Pole, or perhaps a colinear array. A good book on the subject is "Vertical Antennas by Bill Orr, W6SAI", ISBN 0-933616-09-0, available at most Ham Radio Stores.

Good luck with the project. There are some antenna project links on the URL below including a J-Pole.

Bill,

Not only is the .435 repeater "the nations second oldest continuous operation repeater". It is also the most monitored repeater in the world. To see the .435 repeater leave the air would be a very sad day in ham radio.

So what seems to be the problem with the group that uses the repeater? I have yet to see a problem. Is it the operators style that you don't like, Bill? Well sir, this is America. The people are FREE to make whatever choice they want. If someone wants to make an ass out of one's self, hey more power to them. You have a choice Bill. Not to listen by turning the dial. Yes, you also have a choice to complain about what comes out of your radio. If it's the rules and regs that you want to talk about, I think you may want to start on HF. A question that comes to my mind. If the rules say that you are to use the minimum power to establish communications, then why are there people runing over a KW on 20 meters? When one, yes a single watt of power, would be more than enough to establish communications. This small little rule that no one pays any attention too can crash any point made about the folks on .435 not in compliance with rules and regs.

Either way, if the repeater is really up for sale, I hope that someone from the group will buy it. Continueing it's outstanding operation for many more years to come.

I just wish that I could hear the thing out here in Mojave. Whats up with that anyway...

> Only if learning the code is something they like to do.
> If you buy into that idea of hobby, you have to buy into it
> the whole way.

HAM RADIO may be a hobby, but when you decide to make the AMATEUR RADIO SERVICE your hobby, then learn the code. There is NO CODE HF available to everybody. It is called CITIZENS BAND RADIO.

So, what exactly is all that "Die, evil CW beast" crap all about? No coder who want HF have that chance already. There is no reason to abolish CW for AMATEUR RADIO HF PRIVILEGES, and though a no-code Technician, I will go onto the barricades to defend the code requirement.

Most guys who complain about the code complain as code keeps them from upgrading. But then guys, here is some NEWS:

It is not the code that barres you from upgrading, it is your approach to it. Most people start out with practice tapes of the boring kind. When bored, you don't learn. There are other approaches like mnemonics, rhythmics and even graphics to imprint the code onto your memory in ways, that make you smile, chuckle, and in some instances learn the code without really trying.

And only when you use the key and the code, you will find, that all this garbage about the code being outdated and superseded by digital communication modes, is just that: GARBAGE. For the digital mode CW, you just need your ears and yiur ears. For elaborate digital modes, you need at least a computer, even some of the digital gadgets, like CW-, RTTY- and ASCII-display-readers are dedicated computers.

There was one goof, arguing, that CW is totally outdated compared to digital modes. As an example that ignoramus cited the Jupiter probe, whose signals are so weak, that a ham radio receiver would not be able to copy if they were CW. But he forgot to mention all the signal processing technology involved, and the high gain parabolic dish antennas, and the ultra low noise pre-amps, and ... all. What he ignored to see, is that digital and morse code are both carriers keyed on and off. They differ in the following respects:

- Morse code, on/off-keying of variable duration
Digital on/off-keying of fixed durations
- Morse code, no phase shifts
Digital phase shifts involved, when getting beyond 1200 baud

Actually, to get the high bit pumping speeds with digital involves a lot of phase shifting, flank steepness forming, and other tricks. And this actually is one weak point of digital over the air on HF. Weren't we talking 1.8 thru 30 MHz in this comparision? Fading, multiple skips, flutter fading, sporadic e, sporadic f ... Lots of phase shifts involved, and flank steepness deformations....

A little paing attention in science class at high school or at engineering classes about the compression and rarefication effects of travelling waves would tell most of the "Digital is better" guys, that with all the tricks involved into high speed digital, digital is also more distortion prone than CW.

And then, you get more bang for the watt by morse. Morse just uses the carrier frequency, thus puts all energy just onto one signle frequency. Digital usually uses keyed tones over the air, two different ones for "1" and for "2". It thus is not a pure digital (i.e. ON/OFF) mode, but kind of phone mode. Sorry, guys, CW is the only real digital mode on the air if you go along a real pure view of digital.

> Gary Coffman KE4ZV > Destructive Testing Systems | we break it.
> 534 Shannon Way | Guaranteed!

You wont break the code, no matter how much you try.

1917. Re: HAM Antennas vs CC&R's

I don't know if you should waste your time or not. Perhaps not.
Here's why. If you call the ARRL or any other ham assistance group,
they will first call your neighbors to see what they think of you.
And of course if you have been comming over their TV or stereo or
phone, they will not have any thing nice to say about you. The assis-
tance group will then come back to you and say: " Uh Gee mister ham
radio operator, none of your neighbors have any thing nice to say
about you. We are not going to be able to help you because of the way
your neighbors feel about you and we don't want to get involved in a
situation that might blow up into a big political mess. Blah Blah
Blah." And you might say in return: " They don't like me because I am
comming over their electronic equipment! What is the matter with you!
Of course they don't like me! What do you think they are going to
say?" "OH We love mr ham because he comes over our stereo and
phones!" Why talk to them in the first place. That is, unless you
are really trying to find a reason to not get involved in the first
place.
The tendacy of these ham assistance programs to avoid situations of
strife is useless. All situations of interference are hostile! So
with no help at all from the ARRL or any other interference group to
help me I adopt the attitude of: If you have interference from me, go
and ask your self why do you have electronic equipment that receives
ham radio transmissions. Don't come crying to me.
And for the rest of you, don't waste your time calling the ARRL.
They are a self centered organization only interested in getting as
much money from the ham community as they can.
Any way, that is the exactly what happned to me. Want to guess if I
am an ARRL member now?
If you really need help to stop your interference complaints, use a
base ball bat in the middle of the night. I did and now I have no
complaints at all. There is no more pounding on my door etc. Gee, my
neighbors don't talk to me any more at all. It's wonderfull! It is
amazing how a smack on the side of the head with a wiffel ball bat can
stop any complaints in their tracks. It is time that the ham
community gets tough with their neighbors. " You got interference?
Too bad COCK BITE! I got license, you got SHIT!

FUCK YOU ARRL!!

Soon I'm going to be installing an audiopatch on my mobile radio in the house. Rather than use the 8-pin connector on front, it'd be much more convenient to use the 2 jacks in the back intended for packet. The main question is, are the audio in/out & ptt connections in back equivalent to the front conncetor and the external speaker jack? The instruction book says "The PTT control through the rear jack is solely for packet use only, and may not exhibit the same characteristics as the microphone PTT".... To me it seems like it would work the same... any input? Please email replies back to me. Thanks in advance.

Hello Chiron,

A good book that you can find information about it is "The Radio
Amateur's Handbook" that there is a chapter that tells everything about
"Test Equipament". I think that you can find a schematics to build your
own VSWR!

I know of no available "statistics" but do know of software publishers that
use estimates of the number of pirated copies to determine the suggested list
price (or selling price) of their software.

>>It steals the work of many people.
>
>If the person who pirates a program didn't intend to buy it anyway,
>how is the software company losing anything? I don't see it.
>
If I steal the fruits of your labor (or just refuse to pay you for it) then
you are not losing anything if I never intended to pay you. Right? Also,
although it isn't completely comparable, if I drive off with your car (and
later return it) then there is no crime if I did not intend to buy or rent
it.

You don't need to respond to this since you obviously have no concept of
morality or ethics.

Umm, not exactly. Your FCC license doesn't convey rights, it conveys
privileges. In being given those privileges you agree to abide by
certain rules. If you don't want to abide by them, turn in your license.
Those of us that do want to abide by them do not want to listen to your
trash-mouth.

1928. X-Q antennas for EME?

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-25 00:00:00 UTC
From: sbabb@lpub.com
Message-ID: <5cdnpj$apf@news-central.tiac.net>
Source record: 206407
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.antenna,rec.radio.amateur.misc

Has anyone tried expanded quad (x-q) antennas in EME arrays?

An x-q antenna uses ~2 wavelength loops as opposed to the ~1
wavelength loops in a regular quad. Actually, the x-q 'loop'
is broken by an insulator at the halfway point from the feed.

The 3rd edition of Orr & Cowan's _All About Cubical Quad Antennas_
(ISBN 0-933616-03-1) claims that a 2 element (DE & REF) x-q with
0.125 spacing gives 9.5 dBd of gain. A regular 2-el quad is about
7 dBd and a 2-el Yagi is about 5.5 dBd.

Given those numbers, I would think that it would be possible to
build a 4 antenna array of modest length (at least compared to the
usual EME beams) antennas with over 20 dBd of gain.

Comments? Experiences? Computer models?

Isn't it a little more like the poverty stricken student makes a COPY of the Mercedes Benz, and uses it? In your analogy, the owner of the Mercedes would no longer be able to use the Mercedes - that IS theft. In this case, however, Mercedes wouldn't be out a car or a sale.

I disagree with software piracy, but feel that the cost of the piracy is often rather exaggerated by equating every illegal copy with a lost sale. Many would never have been made at all at the regular price.

ARRL Bulletin 4 ARLB004
From ARRL Headquarters
Newington CT January 25, 1997
To all radio amateurs

SB QST ARL ARLB004
ARLB004 FCC finds missing call signs

Following up on ''a few inquiries'' into why certain call signs were not assigned when they were available, FCC personnel in Gettysburg report they found some 3355 call signs (mostly 2x2 and 2x3 format) that should have been made available for the vanity program but were not, for some reason. An FCC spokesman in Gettysburg reports a search of all vanity applications (including those that required special handling) comparing requested call sign(s) against the 3355 turned up four to be resolved. The other call signs now have been made available for future vanity grants.

Earlier this month, callers to the FCC's Gettysburg office were being told that processing of vanity call sign applications would not resume until early March because of ''unspecified computer-related problems.'' Gettysburg now seems to be pulling back from that date, and a spokesperson said this week that the FCC hoped to resume vanity processing by February 1. Before processing the backlog of vanity call sign applications, personnel in Gettysburg first plan to deal with those applications that required special handling--the so-called ''WIPS'' (work in process) stack--which is backlogged from early November. A spokesman said Wednesday that the FCC will resume work on the WIPS stack ''in about a week.'' Also, contrary to what several callers were told, the FCC did not issue a public notice about the vanity call sign program this week.

>than that, all you'll recover is a constant unmodulated carrier, IE
>you have filtered off the modulation sidebands and are left with only
>the AM carrier.

If we use "PARIS " as the standard word, which contains exactly 50 dot times including the interword gap, the dot time for 20 WPM is exactly 0.06 seconds (60s /(20*50)). The highest base band signal frequency is generated when sending a string of dots (60 ms mark, 60 ms space, 60 ms mark an so on). If we think of the mark as a positive half cycle and the space as the negative half cycle, the full cycle time is 120 ms and the corresponding fundamental frequency 8.333 Hz.

(Compare this to a video amplifier with 5 MHz bandwidth (which is used at 625 line systems), you can still separate 100 ns wide vertical stripes, provided that one is black and the next is white, the next again black and so on. Thus, one black and one white stripe are 200 ns wide combined, corresponding to a fundamental frequency of 5 MHz).

IMO, since it is required to send both the mark and the space, we are actually transmitting 8.333 symbols/s and as far as understand the definition for baud rate, this should also equal to 8.333 Bd.

Anyway, amplitude modulating a carrier with 100% base band sine signal at 8.3333 Hz will produce two sidebands, one above and the other below, producing a bandwidth of 16.666 Hz.

>Now this still looks pretty good, but we haven't yet added in a

>we want all the signal energy we can recover.

When taking the third and fifth harmonics to reproduce the baseband square wave more faithfully and to enable asychronous detection by the ear (to detect the transitions), the required bandwidth is 83.33 Hz.

In my calculations I get half the bandwidth and thus, I get that OOK Morse is 3 dB better than Gary is calculating for OOK Morse.

Paul,

I have built both. In my opinion, the Ten-Tec is *much* better. The Hamtronics kit was not great on the RX side. The sensitivity was poor and it had a tendency to oscillate.

The Ten-Tec kit has a decent receiver and furthermore, it has a built-in TX/TX switch. Using 20 as the IF, on the other hand, has the disadvantage that you are only able to work on a limited part of the band. The advantage is that you can now use another transverter (say 144 or 222 MHz) at the same time.

73 de VE7MDL ....Erik.

Well, Carl WA6VSE, soon to be Kilo Zero Oscar Kilo, has advocated having
all licensed revoked except those that meet HIS standards of excellence.
Of course, he'll deny it, as he always does, but deplanes knows better
and has copies of such postings

>

> not? Any why are you interested in this in the first place?

Forget that part. Both Lennart and Carl are 1st class racists. As far
as licensing, Lennart is protesting the fact that he can't get on HF
legally...he's too busy...he hasn't;t had an opportunity..HE'S LAZY

>

> Geezuz - where do they come from???????
>

Well, Lennart is from Van Nuys California..home of some of the craziest
fruit loops in the country. Carl the putz is from the midwest after
living on a sailboat for many years where he hobnobbed with the poor 3rd
worlders and shared their meager food stuffs.

Both took massive amounts of drugs in the 60's, but Lennart also
partipated in atom bomb tests in the Pacific.

Cael is the proud holder of Tech+ license WA6VSE. He is licensed for 21+ years and is proud that he exemplifies the fact the most people are lazy/ In Carl's case, Carl can copy 20wpm in his head..there's plenty of room as there seems to be very little cluttering his cranium. He has forgotten mote RF theory than most people have red blood cells. He has chosen not to upgrade BECAUSE

(1) he's a lazy SOB

(2) he's a liar and really isn't an RF engineer for al 2 billion dollar communications company (I think he's either a janitorial engineer or a was hired under a "hire the mentally deranged program)

(3) he's really the evil twin to Burt K1OIK

pick one.

Carl's hobbies include expressing HIS opinions, while discrediting all others. Inventing new and exciting insults. Wearing white sheets and pillow cases to social events, like the front yard, late night barbecue and exchanging love note to his pal and friend in Van Nuys, grand puhbah Lennart.

Be careful what you say about Carl. He has the tendency to threaten legal action against you as an attempt to keep you from expressing your opinion about him, his friends and his causes.

Just a work of advise next till you try to impugn his character. BTW, if you find his character, tell it Carl is looking for it and it shold go home right away.

So get a clue and a life

Okay, so I'll freely admit I'm new to this stuff (ham radio, not computers). I got one of these for Christmas and I got the ARRL's licensing course on videotape. While I'm studying, I'd like to be listening. What I'd really like is to know exactly how to have the thing scan the entire band automatically.

Yes, I read the manual, but the key strokes they talk about don't seem to be working. I'm too new to this to be sure the damn thing works right.

If you've got one of these, would you mind responding with "step-by-step" instructions (and any other tricks you might know about). Thanks.

Your ham radio group may be interested in this free software.

FREE HamExam, Amateur Radio Study Software!

Lightning Industries is offering a FREE demo of our "HamExam No-Code Technician" study software for Windows 3.1 & 95. This program will prepare you for the entry level Amateur Radio license test. The demo contains questions that will expire on July 1, 1997.

HamExam is very user-friendly and very effective. This software usually sells for $39.95.

To download the demo or get more info, visit our website at:
http://www.snowcrest.net/lightind/cover.html

Thank you.

Hi Mike,

You've just had an encounter with Len, of the famous Lennie & Squiqqie
code-war flame-fest fame.

No, he doesn't have a callsign. Despite "having forgotten more RF theory than
the entire combined population of the known universe combined knows", he
can't seem to get motivated to go take a Technician-class examination. He
sez its his way of "protesting", but all of us really know that he's a
big wind-bag full of hot air.

>> you'd have posted in there), then you would have had the astounding
>> revelation that no-code-TEST advocates want TOUGHER written test
>> elements. Now what?
>
>I read that newsgroup as well and I've read no such thing!

Several people have posted that they want to turn amateur radio
examinations into MSEE graduate-level examinations. They want to
turn amateur radio from the "private fraternity of beepers and yackers"
(their words) into a "private fraternity of propeller-heads" (my words).

>Jeez - just because its LAW doesn't mean I have to personally accept it
>or agree with provided I don't interfere with it. Now you try to use terms
>that have racist and authoritarian inferencess to try to distort my comments.

This is Lennie & Squiqqie debating tactics 101. When your arguments loose
all substance start calling your opponent a racist or hitler-wannabe.

>You state that you are a "no-code advocate" - but are you licensed?

He's not, nor will he ever be. Some day when there is a codeless license
(oops, I forgot, we already have one) he'll just find something else to
complain about. If he were around 75 he'd fit right in with the geezers on
75 meters.

The point is moot. According to Carl, all hams do is yack and contest
on HF. THey don't design radio gear. So, if all you want to do is get
on HF to yack without a code test, CB is perfect. The fact that it
doesn't allow you to build radio gear is irrelevant, since all people
want to do is yack and not build anyway.

yeah, but the systems get tied up trying figure out who should "own" the
transceiver everyone can see. also, simultaneous appearances in several
dozen cells of the same phone usually will cause a security alert that
may
cause you to lose access to the cell radio net since the cell radio
folks
will think you've been cloned. that the antennas don't favor looking up
does not mean that they would not respond to a radio above the antenna.

> Cell phones are not permitted in flight for EMI/RFI concerns with
> navaid compatibility issues.

now i know you are not completely informed about what you're talking
about.

>The plethora of FMS, advanced EICAS and
> FADEC gear on a typical commercial (or buisness) aircraft make such
> precautions prudent.

aircraft carry a lot of equipment that operates over a very wide range
of
frequencies. things like flight management systems and the other systems
are
pretty much digital and sources of interference themselves.

GPS is microwave. VHF Nav and ILS is below the FM broadcast band
(leading to
broadcasters wanting to put ever more powerful transmitters near
airports..8) or really 8( ). marker is 75 MHz. glide slope is in the 330
MHz range. DME and transponder are L-band...Omega is VLF...VHF com is
118-136 or so..ADF is 190 to 1700 kHz plus 2182 kHz..and some guys have
HF.

i suspect the bigger threat to navigation would be a high-side injection
broadcast receiver or some equipment that makes hash in the 108-118 MHz
region.

>The airlines couldn't give a rats ass about the
> cell phone company system.

they also don't want to be a source of a problem either.

>They are more concerned with their aircraft
> being able to navigate the airspace without incident.

well, that and there are airphones that the get a cut of the profits
of..

Thanks Steve and Mike for filling me in on Mr Anderson.

I did not post my comments to incite or "stir it up". Its exactly these types I'd like to see less of, both on the air and net. I stand firm in my belief that the CW code test is not an insurmountable barrier and should be retained as part of the testing process. I am glad to see that I am not alone in this regard.

Now that I've said my piece and rebutted Mr Anderson's reply I will fade back into the woodwork and spend my free time playing radio and enjoying the fellowship and cameraderie that I find on the Boatanchors-List, where there are no flames, insults and misfits such as the ones I have found here.

Thanks again guys.....I'm outta here!

>and the majority of them will pass their Advanced license (with Morse).

I doubt that very seriously. I don't think you can bring them to 13 WPM
and an understanding of Advanced Class theory in 12 hours of instruction.
My experience is that a full 12 hours of class time is required for the
theory alone. I don't teach Morse classes, but I took one as an 8th
grader, and 6 weeks were required to get us to *5 WPM*, in fact of a
class of 12, only 5 passed the 5 WPM test the first try, two others
passed a month later (you had to wait 30 days back then), and the rest
gave up. Note, everyone passed the Novice theory (such as it is) of
course, and only about an hour of instruction was occupied by that.

I haven't sat in on Morse training classes much, stuff gives me a
headache, so I don't know if that is typical. But I haven't heard
of many people going from zero to 13 WPM solid copy in 12 hours of
instruction. And I certainly don't think that's likely when the
12 hours are also needed for theory instruction.

>13 WPM Morse, if properly instructed, is no more a serious obstacle to
>obtaining an Advanced Class ham license than is the theory.

Perhaps, but one still has to ask whether Morse deserves equal
weight with electronic theory on an amateur exam. Does it still
serve that compelling a government interest? I don't think so.

>I agree that the current ham license exams are not reflective of a
>"professional level" of knowlege if by "professional level" you mean a

>obtain an Extra Class ham license. Your eighth graders could get their
>professional licenses, too.

Yes indeed. In fact, I had my First Phone (predicessor of the GROL)
before I had my amateur license. Of course no Morse test is associated
with this. And while the First Phone was a professional exam in the sense
that it was required for employment as a radio tech, it certainly isn't
at the professional engineering level.

Software piracy has several variations that are being claimed:

1. Outright copying of commercial software.
I agree that is illegal, immoral and unethical.

2. Use of shareware without paying.
That can certainly be viewed as immoral and unethical, BUT
there is nothing yet supported by any case law that indicates
it is illegal. Indeed, there are good legal arguments as to why
it isn't. They have been posted here before.

I am considering purchasing an IC 706 for use mainly on RTTY modes. Can anyone answer the following (not clear in users manual):

1) To run ASFK (instead of FSK) does one have to use the LSB mode rather than the RTTY mode? (Pactor 2 uses PSK not FSK).

2) Are the optional 500hz and 350hz filters accesible from the LSB mode?

3) The users manual is a little coy about permissable duty cycle when running 100% duty cycle modes such as regular RTTY - anyone know what the limits are?

> aa5bi

None of the PC morse decoding programs I've seen will work as well as copying by ear, especially if there is any noise on the signal or if the code isn't sent perfectly. One program that's supposed to work with a Soundblaster card is SBPMORSE, downloadable as sbpmorse.zip from the Longwave BBS at (706) 672-0360.

Another very popular shareware program is HAMCOMM, which also does RTTY and other digital modes. Details for a simple interface that you can build for under 10 bucks are given in the documentation. See the December 1996 QST, page 57 for more details. Hamcom31.exe is available from many sites including ftp://oak.oakland.edu/pub/hamradio/arrl/bbs/programs/

Most ham multimode TNCs that can do RTTY, such as my old PK-232, are also able to decode CW.

Good luck

Lyle

James A. Pratt Jr <n8nhy@earthlink.net> wrote in article
<32eb4096.1698196@news.earthlink.net>...
> Carl Does it make sense to you to keep code, I assume not but some
> things we need to work for to say we can do that, don't expect the FCC
> to hand you a lic and say have at it, there is a reason for the code.
> Study and take the test and stop complaining
>

James,

1) There is no validity in asserting that "we need to work for" anything
.. the license is
NOT a reward for doing work ... it is not the FCC's purpose to "make you
work for" a ham
license, any more than it is the Department of Motor Vehicle's purpose to
"make you
work for" a driver's license ... the ONLY purpose of a license test should
be to make you
demonstrate (reasonable, relevant, justifiable) qualifications necessary to
assure the
government's legitimate purpose of assuring safe operations and minimizing
the potential
for interference to other (more important) services ... NOTHING else is
legitimate or justifiable.

2) The only "reason for the code" is that it has "always" been a
"requirement". In ancient
times, it may have been a valid requirement, but only in historic times,
not in the present
or the future.

3) I have taken a code test (albeit the 5wpm one) ... I have no desire to
use the code so
forcing me to learn it serves no USEFUL purpose ... it only wastes my time
and makes me
feel that those who insist of forcing it on me are the enemies of rational
regulation and progress.
The code requirement is THE major barrier to the growth and modernization
that ham radio
so desperately needs for its very survival.

I have not checked you in the callbook, but since I've been a licensed ham
for over 20 years
that there's a good chance that I've quite a bit more experience than you.
I am also an
engineering professional with over 25 years of experience in RF

communications systems and
equipment, so I have a good feel for what's relevant in terms to today's
state of the art in the
field. So please don't try to feed mean any of the standard "the code gets
through were nothing
else will" ... "the code is important for emergency communications" ... or
any of the other standard
issue ridiculous mythological garbage that pro-coders spout over and over
and over because they
simply don't know any better ...

> talking 1.8 thru 30 MHz in this comparision? Fading, multiple skips,
> flutter fading, sporadic e, sporadic f ... Lots of phase shifts involved,
> and flank steepness deformations....

HF channel impairments do present some challenges, but they are clearly not insurmountable ... modern modulation and coding techniques, DSP, and good protocol design take care of those problems ... only the beeper's fear and lack
of understanding makes them *seem* insurmountable ... then the beeper says "nothing else could possibly work, therefore CW must be best" ... absurd!!!!

> And then, you get more bang for the watt by morse. Morse just uses the
> carrier frequency, thus puts all energy just onto one signle frequency.
> Digital usually uses keyed tones over the air, two different ones for "1"

> and for "2". It thus is not a pure digital (i.e. ON/OFF) mode, but kind of
> phone mode. Sorry, guys, CW is the only real digital mode on the air if
> you go along a real pure view of digital.

Again, you haven't got a clue ... only vague collections of missapplied buzz-words and inadequately underrstood principles. Please stop spreading your half-truths and missimpressions as if they were scientific facts ...

Exactly. There are more appropriate newsgroups for discussing software piracy. There are people whose "awareness" won't be raised about the illegalities and ethics of piracy. I think they're quite aware. As long as a the government takes a lackadaisical about enforcing software copyright laws, piracy will thrive. I have yet to see them do anything to shut down the alt.warez newsgroups.

When all four occure, no you can't.

>Technical changes are irrelevent.
>Location changes within the same service area are irrelevent.
>Callsign changes are irrelevant.
>Ownership changes are irrelevant.

The simple fact that the rptr had to be taken out of service when
it changed modes in the early 70s voids the "continuous operation"
claim. I was there (using my Elmer's callsign) when Burt had his AM
machine on Palos Verdes; what replaced it was not the same rptr,
call, or location (~30 mile change means different coverage and
users).

>The *repeater* has been in service to the SoCal Amateur community
>longer than most Usenet users have been alive!

Well then, we must not agree on the definition of "repeater."
Time for an analogy. Suppose I own a Vietnamese restaurant (yum!)
named Pho Hoa, that serves the Kaimuki community. After N years I
decide to sell the restaurant, and the new owner changes the menu
to Japanese, changes the name to Bokyo Hori Bushi, and changes the
location to Kaneohe. M years later, can he claim that his restaurant
has been in continuous service for N+M years? (The Kaimuki diners
can drive the 10 miles to Kaneohe so I guess he *could* claim he was
serving the original community.)

Any more flooding in the Carson Valley from the latest storms, Dick?

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2WE, N3ADL, K4MA, WX5L, W6TEX, NL7TB, K8YSE, N9CK, NS0B, DF6QN, EI2GX, EI6FR, G4BUE & DX News Sheet, LU1DZ, OH6YF, ON4UN, PA0JR, RW0MM, VE1DX and VE9AA for the following DX information.

50th ANNIVERSARY NCDXC. The Northern Calif. DX Club (NCDXC) is currently celebrating the 50th anniversary of the club. The W6TI club station has been active since Oct. 10, 1996, and as part of the celebration, they will operate for 1 year with various club members in the pilot seat. DX stations who work 50 NCDXC club members qualify for a nice certificate. If you work the club station W6TI/50 you get credit for 10 QSO's. Information about the 50th celebration and a list of NCDXC members may be found at the WEB site: http://www.aa6g.org/ncdxc.html
W6TI/50 has been active and has worked 135 countries and also the VK0IR on 20,40, and 80m. Picture of the Certificate and QSL may be found at the WEB site.

8P9, BARBADOS. Steve, K2WE, will be operating for 1 week starting February 4th. Steve will pick up an 8P9 callsign upon his arrival on the island. He will operate 160-10 meters including the WARC bands on both SSB and CW. QSL via home call or previous callsign NI2C.
Also, look for AA4NC and Steve, K4MA, to operate from the 8P9Z's station on Barbados from February 27th through March 4th. Activity will be on all bands and all modes including RTTY. They will operate Multi/Single in the ARRL DX SSB Contest. The callsign is unknown at this time. All QSLs go to K4MA (ex-KI4HN).

8Q7, MALDIVES. The "DX News Sheet" reports Hans/DL8NBE, Rolf/HB9DIF, and his wife Manuele, hope to be active in March as 8Q7BE (SSB/RTTY) and 8Q7BV (CW) on all HF bands with two transceivers and GP, dipoles and LW antennas. QSL to home calls bureau only.

ARGENTINA ANTARCTICA BASE. LU1ZI, from the scientfic station Jubany, which is located on De Mayo Island (King George Island) in the South Shetland group, is operated by LU8DEK, Abel. ABEL will be active until March 1st. He normally can be found on 40 meters CW some nights. Check between 0230 and 0330z. The direct QSL route is: Radioestacion LU1ZI, Direccion Nacional Del Antartico, Cerrito 1248, Buenos Aires, Argentina. It is recommended to send 2-3 IRCs with a SAE.

CY9AA, ST. PAULS ISLAND (UPDATE). Although the CY9AA operation is still months away, Mike, VE9AA, has provided the following details. There has been a new operator added to the DXpedition. Operators are: VE9AA/Mike/ Group Leader, VE1PZ/Doug and K7BV/Dennis. The dates will be June 13-21st, maximizing the chances for a CY9 QSO on the higher bands via Sporadic E. Bands will be 160-2 meters inclusive. Beams, amps, and a FULL SIZE vertical for 160 meters will be used. Check out their WEB-site at: http://www.uksmg.org/index3.htm (Look for the CY9 logo on the left)

CY0, SABLE ISLAND. It has been reported that Wayne, VE1CBK, will be active from Sable Island signing CY0SAB. He will be on Sable from January 27th until January 31st. Wayne will be on the island for commercial reasons, and HAM radio activity will be during off hours. He expects be active early morning and afternoon/evening hours (1200z and after 2000z). He has no specific frequencies other than the "usual" DX locations. Wayne plans to concentrate on the lower bands (160, 80, 40 and 20.) Otherwise, if propagation permits, 17 through 10 meters is possible. He is currently assembling RTTY equipment, and it is likely he will be active on that mode. Additionally, he will try to be active for as many RS-12 satellite passes as possible. QSLs go to Wayne E King, 63 Brook St, Lake Fletcher, NS, B2T 1A5 Canada.

DX FROM THE NETHERLAND..... During PACC Contest activity, look for stations with special prefixes PA6V in province ZH (QSL via PI4KGL) and PA6W in province GD (QSL via PA0JR). Their activity will be on all bands (except WARC) during the PACC Contest weekend February 8-9th..... Worked All Provinces (WAP) award (format A4, six colors) is available when all twelve provinces have been worked. If provinces were worked during the 1997 PACC Contest, please send log-extract and 10 US greenstamps to: VRZA Award Manager, PE1EBJ Ad de Bok, P.O. Box 56, 5320 AB HEDEL, The Netherlands.

GI, RATHLIN ISLAND (Northern Ireland). The WestNet DX Group will be active this summer from this Irish Island with has an IOTA of EU-122, The dates of their operation are June 12th to June 16th. The callsign to be used will be GI/EI7NET. Operations will be on all HF bands 160-10 meters. It is also hoped that operation on 6 meters will take place. Modes of operations will be CW,SSB and RTTY. QSLs will be via EI6FR. NOTE: All direct cards for EJ7NET EU007 1996 have been answered. QSLs for all stations appearing in the EJ7NET log have been prepared and will be answered via the bureau this month.

FRC 70th ANNIVERSAY AWARD. If you were fortunate to work any of the members of the Frankford Radio Club during the contest over the past weekend, you may qualify for a special full color certificate for their

70th anniversary celebration. Please check out the full story and get
a list of FRC members at the following URL:
http://www.frc-contest.org/70th.html

Requirements are: US/NA Stations need 70 QSO's with FRC stations
DX stations need 35 QSO's with FRC stations

Submit log info ONLY to K2FL (CBA) for automatic issuance of certificate.
QSOs with their DXpeditions also count for the award. The following are
some of the DXpeditions which took place 1997: V26B, PJ9E, V47KP, VP5T,
VB9DH, VP9DX, P40W and WP2Z (CQWW Phone 97 only). For FRC roster via
USPS, please send query along with SASE to: Frankford Radio Club,
P.O. Box 431, Alburtis, Pa. 18011-0431

KG4, GUANTANAMO BAY. Larry, KG4ML, is expecting to be on-base February
11-27th, and hopes the work sked will allow operation in the ARRL DX CW
Contest February 15-16th. Other bands/modes will be operated as work
allows, but expect to see him on the WARC bands. To date, KG4ML has worked
about 6500 QSOs in 5 trips to KG4 land.

OH0, ALAND ISLAND. From January 31st through February 2nd, OH1NX, OH1NYP,
OH1TX and OH2BH (returning from his XX9TR operation this past weekend)
will activate OH0NYP on 160 meters. The variety of other callsigns may be
heard on the higher bands. The 160 meters station will transmit 1825 kHz,
especially focusing on the JA and U.S. openings.
Also, members of the Contest Club Finland will be working CQ 160 Meter
Contest as OH0AM from Aland Islands. They are especially looking for the
USA and Japan with their new antenna. Operators are OH1EH, OH1MDR, OH6EI
and OH6YF. Outside the contest, Harry, OH6YF, will be looking for the
WARC band QSOs as OH0MYF.

TN, CONGO. Baldur, DJ6SI, is now active as TN6X, and will be active until
February 4th. He will be active on all bands 160-10 meters SSB and CW.
QSL to his home call DJ6SI.

UE0LWA, SPECIAL EVENT STATION (FAR EAST OF RUSSIA). Station UE0LWA is
now active on the air to celeberate the 70th anniversary of the
Russian supply to defence Sport-Technical Organization - <<ROSTO>>.
Operations will last until February 3rd. The station is located in the
port city of Vladivostok (CQ zone 19). Operations will be on CW/SSB with
activity on 160-20 meters and VHF. QSL via RZ0LWA or bureau.

USI ALERT (United States Island Award). Dennis, N9WDQ, plans to activate
Chouteau and Gabaret Islands (new) and maybe Walkers Island on January
28th, starting around 1600/1700z. Check on 14.260 + - QRM. Note: The
islands are listed in the directory as IL-003 and 002 but have not been
activated to date. When activated, the numbers will contain the "R"
designator. QSL direct w/SASE or Dennis can be eQSL'd (see eQSL list
at the USI website)!

V31, BELIZE. There will once again be a SMC expedition to Belize for the
ARRL DX CW contest. John/WC0W/V31TP, Alan/NS0B/V31EV and possibly
Bob/WG9L/V31RC will be going to Belize for a week, which includes the

ARRL DX CW Contest. They will try to be on the air by mid-late afternoon local time on February 12th, and be active until February 18th. They will be a Multi/Single entry in the contest and will do as much operating as time permits, both CW and SSB, but mainly CW, before and after the contest. Look for activity as V31TP in the contest and with any/all of the individual call signs outside the contest. Activity will be limited to 160/80/40/20/15/10 with NO WARC band operation likely. QSL via the appropriate call as indicated above.

VP5, TURKS AND CAICOS. Steve, N9CK, will be active from February 4-11th, as VP5/N9CK. Activity will be mainly CW and RTTY. He will active during the WPX RTTY contest using the callsign VP5CK. QSL to N9CK (ex N9CKC) good in any callbook or via bureau.

VK0IR HEARD ISLAND UPDATE. As of January 25th (0903z), statistics show the following: Total QSOs: 71,184 QSOs with 24,871 different stations.

CW: 39,798 SAT: 490 15m: 8,457 30m: 6,568 A160m: 1,237
SSB: 29,768 10m: 228 17m: 8,575 40m: 13,866
RTTY: 1,618 12m: 747 20m: 26,751 80m: 4,265

LATE MINUTE UPDATE! VK0IR breaks a record! As of Saturday afternoon, VK0IR broke 4J1FS's QSO count of 74,495 with a current total of over 80,000 QSOs.

ZY0 ST. PETER & PAUL ROCKS (UPDATE). Karl/PS7MM and Tino/PT7AA, plan on leaving Brazil via a fishing boat on February 1st for a 4 and 1/2 day voyage to the Rocks. They should be active around February 5th. Activity will be on all the usual DX frequencies. Karl will attempt to knock down the 8th most needed country on the RTTY list. A special thanks goes to Randy Hollier, WX5L, for his efforts in supplying the team with a RTTY station to use. Karl will also use a propagation program to help utilize the existing conditions. Karl will operate as ZY0SK on SSB/RTTY and Tino will operate as ZY0SG on CW. QSL to each op's CBA address.

John:

Only one thing wrong with your thought process....it is based on common sense
and in fact makes sense. Unfortunately a lot of old Hams (I am 47) are totally
incapable of accepting change of any type and don't realize their attitudes will
ruin what is left of the hobby. I actually find the on air actions of many of
these people to be offensive, childish and certainly not in keeping with a hobby
I would want to introduce to an interested newcomer. You would think they might
want to clean up what is there now before attacking the future. Me thinks the
hobby won't be worth anything if the current rate of degradation continues.

Dave S.
N9LWO Yes I passed the code test but so what.

I need info or a source of info on a french military radio set.
I beleive made in the US, looks similar to a american AN/PRC-104.
Probably manufactured in the 1980's. VHF FM? SSB? Data modes?
Approx: 28 lbs, 8 x 10 x 3
Freq's: 33 to 47
Markings as follos:
STTA
EMETTEUR-RECIPTEUR-ER79A
MARCHE No74/83006

STTA
CASE CY 744 A/PRC
CSF.79 Bd HAUSSMANN PARIS

Any information would be appreciated.

oh sure we have! Jeffrey KD6NBD is notorious on 435 for being the
"Ive had 4 DUI's and still drive without a license" guy.
If you'd like to write him personally send mail to jeffrey7@themall.net
and share your feelings with him.

By the way Jeffrey isnt heard much these days due to the automated
NBD filter that some users have installed on the repeater. Heh!

By the way to enjoy some more sounds of Jeffrey check out the
435 Sound Bytes page at http://dmz.net/n6uzs/sound.htm
You'll definetely get an earful! Just look for the "Jeffrey Cussing
Marathon".

Enjoy and 73, Richard.

> their authors.

That's the problem with the ham/radio market - it's too small to really justify putting in the work. I have written a bunch of radio related programs all for the Mac (talk about a really small market, Macintosh ham radio software!). Many of them (maybe even most) I wrote for myself, because there was nothing else available. A few of the programs I've released as demo copies, with a shareware fee required for the full version (such as a logging program with the demo allowing a limited number of entries), while the others I've released a fully functional version as shareware (such as radio control programs).

I try to make the programs functional, to the point of doing what they should, and not having bugs (or too many! ;-). In a limited market such as this, that's all thats frankly possible. As others have said, shareware for ham radio can only be done as a hobby, and a money losing one at that!

I have no doubt that shareware with a broad appeal can be very profitable (I recall hearing about the author of White Knight, the first? terminal program for the Mac. He knew he was on to something when his apartment was littered with checks... I wish I had that problem!). But this isn't (and probably never will be) the case with ham radio shareware.

Do I get all the shareware fees I should? Of course not, that's the nature of the business. I get questions from people about using my software who have never sent in the fee. The stats for my web page show many downloads of programs every week. (Obviously only a small percentage of those are probably in regular use, of course I understand that) I'm sure many other shareware authors have the same problem. Will I continue to write shareware? Of course, but I'll focus on writing software that serves my needs, and only continue to improve existing software that is supported by users.

Chris

C L O S E D C I R C U I T A D V I S O R Y

Newsline report number 1015 for release on Friday, January 24th, 1997 to follow.

(*****

The following is a QST

More on the downward trend Amateur Radio. Fewer people are taking tests to become hams and even fewer licensed radio amateurs are upgrading. Also, the ARRL meets in the Duke City and RF safety questions hit in July.

Learn more on Newsline Report number 1015 coming your way right now!

(*****

FEWER TESTS - FEWER UPGRADES

The number of people taking ham tests is dropping. The number of amateurs upgrading is almost at a standstill. So say the figures on 1996 year to date ham radio testing published in the January 1st edition of the W5YI Report.

Last week we reported that the number of higher grade license holders was on the decline. That only the no-code Technician class was showing any growth.

According to publisher Fred Maia who also operates the W5YI VEC, people are simply not taking new or upgrade examinations like they used to. Maia says that until 1992 the number of persons being administered Amateur Radio license examinations was steadily on the rise. But in 1995 the number of testing sessions and the number of people seeking tests decreased dramatically. So did the number of examination elements being administered. And 1996 was the worst year yet with 17,000 fewer examines being administered 30,000 fewer examination elements.

Maia says that there is all sorts of speculation as to why ham radio has slipped into a low growth cycle. One of the most prevalent theories is

that potential new hams are being drawn away by what he calls the wired world of the Internet and World Wide Web. As Fred points out, there is no exam or licenses needed to get onto the Internet and working DX is no harder than clicking on an icon marked chat. Needless to say that none of this bodes well for the future of the Amateur Radio Service, and especially for population growth on the high frequency bands.

But there is one bright spot in all of this. The ARRL reports that there were 306 more new licensees age 21 and younger in November of last year than during October. Kids may love the World Wide Web, but some youngsters also consider ham radio a viable communications interest as well.

(Via W5YI)

(*****

ARRL BoD

The ARRL held its first Board of Directors meeting of 1997 in the shadow of Sandia Mountain, just to the east of Albuquerque, New Mexico and it was in the Duke City that League Directors met on January 16th and 17th.

The League has made it official. The ARRL will work to keep Morse code as a requirement for access to the high frequency amateur bands. The League's decision comes after survey results showing a majority of members favoring keeping Morse code as a requirement for HF operating privileges. The League's Board of Directors has decided not to support changing the existing international treaty requirements when the issue surfaces at the WRC-99.

And amateur radio licenses could get new names and licensing criteria. A committee proposal for changing the FCC's amateur licensing structure will be published in QST magazine. League members will be invited to submit comments to their Directors before May 31st. The Board says it will not take action on the Committee's recommendations before its July meeting. This so that members will have a chance to be heard.

And noting the increasing number of participants in the spectrum management process, the Board has created the ARRL Spectrum Forum. The Forum is an electronic mail roundtable for national amateur organizations, as well as regional entities and groups. And the Membership Services Committee is being directed to study ways to better serve the digital community. Solving spectrum sharing and other disputes may soon have a new procedure to follow. The ARRL is establishing an Alternative Dispute Resolution service for use by individual hams, amateur organizations, citizens, organizations and others having disputes over amateur radio related issues. The idea for the Dispute Resolution Service first surfaced at the League sponsored National Frequency Coordinators meeting in St Charles, MO in October of 1995. The League is also reviewing the way ham radio testing is conducted. The League's Executive Committee has been told to study the adequacy of FCC rules governing the qualifications of Volunteer Examiners. Coming under particular scrutiny will be VEs who obtained license upgrades by obtaining waivers of Morse code proficiency.

The Executive Committee will also investigate the extent of abuses of the Morse code exam waiver provisions for applicants with severe handicaps. And the Committee will be asked to suggest any regulatory changes it deems necessary. More information on the Albuquerque Board meeting will appear in the March issue of QST magazine.

More on the Boards actions in future Newsline reports.

(Adapted from ARRL Bulletin 1/22/97)

LITTLE LEOS TARGET 2 METER FM

2 meter repeaters in the Americas could wind up sharing the 146 to 148 MHZ spectrum if the Low Earth Orbiting Satellite industry has its way. This is the latest wrinkle in the seemingly never ending attempt by the so-called Little Leo satellite industry to find new spectrum to expand into.

And the Little Leo boys are taking a rather novel approach this time. Believe it or not, they are now claiming that they can augment existing ham radio emergency service communications by bringing in their advanced satellite technology. In the simplest of terms, it sounds as if they want to replace us with them. But over simplified explanations are really not enough to explain what's going on. Because of this we want to refer you to the excellent editorial by ARRL Executive Vice President Dave Sumner, K1ZZ that appears on page 9 of the February issue of QST.

Dave takes great pains to explain exactly what's happening and even if hams beat this one back, why we will have to be on guard to protect our VHF and UHF bands for many years to come.

(Adapted from ARRL Letter)

(*****

RF SAFETY QUESTIONS TO HIT IN JULY

The nations VEC's have decided to begin testing hams on the new RF exposure questions next July. This, even though the FCC had granted a years moratorium on the implementation of its new rules regulating human exposure to radio frequency energy.

When it adopted the new RF exposure rules, the FCC also put forth a requirement that additional RF safety questions be added to the Novice, Technician, Technician Plus and General class Amateur Service exams. This meant revising the Question Pool for these exam elements.

The new RF safety questions are intended to quiz an applicants knowledge of the hazards of exposure to strong electromagnetic fields as well as what precautions should be taken to keep himself and the general public away from harm.

(Via W5YI)

(*****

FCC GETS BOMB THREAT

The Federal Communications Commission has received two separate bomb threats. An entertainment trade publication reports that both warnings came shortly after noon Tuesday, January 21st and forced hundreds of agency employees into Washington's chilly streets.

The first threat was received by the agency's Cable Bureau, and the second was received a block away at the commission's M Street headquarters. The caller claimed that a bomb would explode at 1 p.m.

Washington Metropolitan Police and Federal Protection Service bomb squads failed to turn up evidence of any explosive device. FCC employees returned to work at about 3 in the afternoon.

Police believe that the same person made both threats.

(Via Variety)

(*****

ANOTHER VANITY DELAY

The FCC says that it could be March before another call is issued under Gate 2 of the vanity call sign program. No vanity calls dated since the end of last November have been processed because of what an FCC spokeswoman called unspecified computer related problems.

According to the Gettysburg License Processing Facility, vanity applications have not been processed since last December 19th. While computer experts work to resolve the latest problems,

Gettysburg personnel are continuing to hand process the pile of some 600 vanity applications that required special handling from the December 19 vanity call sign run. The FCC also is in the midst of processing several hundred refunds for earlier unsuccessful vanity filers.

NON FM TO FILE FOR UHF/VHF PROTECTION

Weak signal and other non-FM users of the VHF and UHF spectrum are saying it will be full speed ahead in preparing a rule making request to the FCC to protect their turf from encroachment by users of the "fun mode." This, in light of the formal signing of the agreement between the National Frequency Coordinators' Council and the American Radio Relay league. An agreement that creates the National Frequency Coordination office as the potential single point of contact between the FCC and the FM coordination community.

The move by weak signal, CW, SSB, EME, Amateur Television, satellite enthusiasts and even AM users to legally protect their subbands from

encroachment by users of FM began on the Internet Usenet about three months ago. Theses hams say that are very concerned about the memorandum signed between the ARRL and the NFCC because previous gentleman agreements dealing with protected spectrum may not longer be honored by the FM community. The loose knit group will ask the FCC to legally designate certain portions of all amateur bands from 50 MHZ to 13 centimeters as being off limits to any FM signal, be it simplex or repeated in any way.

6 meters and 2 meters already have protected segments for Morse only operation. The coalition will request additional band segment protection based on current ARRL bandplans. No protection is being asked for spectrum above 13 centimeters because there is not yet any mode standardization nor many users of these super high frequency bands.

HAMS RESPOND TO MICHIGAN PLANE CRASH

Members of the Monroe County ARES were activated late on the afternoon of January 9th. This, in response to the crash of a commuter aircraft near Ida, Michigan.

Comair flight 3272 was in route to Detroit Metro Airport from Cincinnati. According to Dale Williams, WA8EFK, a communication center was activated at the Monroe County Chapter of the American Red Cross. Under the auspices of Monroe County Emergency Coordinator Mike Karmol, N8KUF, hams were initially dispatched to the crash scene and the field command post at the Raisinville Township Hall. Communication was provided to the Red Cross, which assisted Emergency Management and Human Services Personnel.

Blowing snow and a 30 degrees below zero wind chill factor hampered efforts at the accident site. Twenty six amateurs were involved with the emergency operation as local officials and National Transportation Safety Board conducted their investigation.

The twin engine Embair Brasillia turboprop carried 26 passengers and a crew of three. All aboard were killed in the crash.

NYC GETS TWO RACES STATIONS

New York City RACES now has two officially recognized stations ready to operate at a moments notice. They are KB2YNK at the Office of Emergency Services in Manhattan and WB2JSM at the Hall of Science Amateur Radio Club in Queens.

According to the ARRL's Hudson Division Loop Newsletter, KB2YNK became a reality in October, 1996. It was the result of an unprecedented donation

of funds for equipment from the City of New York. As a result, the station currently has 2 meter, 70 Centimeter, and HF capabilities. Plans are in the works to add packet and other communication modes by the end of the year.

Meanwhile, WB2JSM is undergoing a major upgrade and will provide everything from packet to HF, 6 meter, 2 meters, 70 centimeters and satellite communications by spring. Extensive power backup systems are being installed to provide long term emergency communications without commercial power availability.

RACES died in the Big Apple in the early 1970's after the people who served from its inception either moved away, lost interest in ham radio or passed away. Now, after two decades its resurrection is now a reality. Its members say that they plan to be in the forefront of a Public Service commitment to the city of New York and it's agencies for many years to come.

YOUTH SPEAKERS NEEDED FOR DAYTON HAMVENTION YOUTH FORUM

New York City educator Carole Perry, WB2MGP, is looking for young hams, age 8 to 18, to take part in her annual Dayton Hamvention Youth Forum. For the better part of a decade, Carole Perry has taken time out of her busy schedule to travel to Ohio to host the young peoples gathering at Hamvention. As is her tradition, she is seeking young hams with the ability to communicate their love of Amateur Radio to other non-licensed youngsters and teens who will be in attendance.

The 1997 Dayton Hamvention will be held the weekend of May 16, 17 and 18 at the HARA Arena in Dayton, Ohio. Between 35,000 to 40,000 hams from around the world attend this gigantic event.

If you are a young ham who is planning on being there, or you know of an articulate young ham who is, please contact Carole Perry as soon as you can. Her 24 hour a day telephone number is

(718) 983-1416

or you can e-mail her to

wb2mgp@ix.netcom.com

LINENGER TO MIR

Ham Astronaut Jerry Linenger, KC5HBR, has became the fourth American to occupy a position on the Russian Space Station Mir. This, following the docking of Atlantis to the Russian space station on Tuesday, January 14th.

Linenger officially traded places with fellow ham Astronaut John Blaha, KC5TZQ, when their form fitted Soyuz seat liners were swapped for return to Earth. He will stay aboard Mir until May. Linenger will be permitted to operate ham radio from the Mir. But he is still waiting for news from the FCC to see if he will be permitted to make third party contacts with school children in the United States and friends.

(Via AMSAT-NA, Newsline)

(*****

CHALLENGER COMMEMORATIVE

Still with ham radio in space, on Tuesday, January 28th the Challenger Middle School Amateur Radio Club in San Diego, California will operate a special event. Station KI6YG will take to the air to commemorate the eleventh anniversary of the Challenger space shuttle tragedy. Operating hours will be from 16:00 UTC on January 28th to 01:00 UTC on January 29th. Frequencies will be on or near 14.250, 21.350, and 28.350 MHZ.

(Via AMSAT-BBS)

(*****

YEAR END MIR CONTACT

And Hampton Virginia's Granby High and Mary Calcutt Elementary schools were successful in a year end contact to U.S. Astronaut John Blaha who just returned to earth after several months aboard the Russian Space Station Mir. What made the contact special was that Astronaut Blaha had attended Mary Calcutt and graduated from Granby High School in the 1960s.

The 10 minute contact was conducted from the Amateur Radio Satellite Station Exhibit KE4ZXW at the Virginia Air and Space Center.

(Via AMSAT-BBS)

(*****

DX

In DX, F6EXV, has received his CE3/F6EXV license to operate in Chile. He will be on the air as soon as he can get the station up and operational. Reports say that he will be there for 2 or 3 years.

And PB0ALB will be in Sarawak, East Malaysia from April 19th to June 6th as 9M8CC. Activity will be on AMTOR, RTTY and SSB on 80 through 10 meters.

And in case you have not heard, the long awaited DXpedition to Heard Island came on the air right on schedule. From all indications the group has run up a record number of contacts including some on bands rarely used for DXpedition operations.

(Via various DX sources)

(*****

COLD CALL SIGN

And finally, get ready for a really cool operation. This as a result of the FCC has granted special temporary authority for John Fowler, N1PDV, to use the call W1B on February 8th and 9th from Jericho, Vermont. The operation will honor the 132nd anniversary of the birth of Wilson Alwyn "Snowflake" Bentley.

Who was Snowflake Bently you ask? He is the man credited with determining that no two snowflakes are alike. Bentley who was born and raised in Jericho is believed to have photographed more than 5000 individual snowflakes using a camera rigged to a microscope. He also

analyzed the density and shape of individual raindrops.

Fowler says that the W1B operation will include SSB and CW in the General class portions of many High Frequency bands.

Use of an autopatch on a home station falls into the same rules as a rptr autopatch...you MUST have remote control of the station (either wireline OR RF ABOVE 222.15 Mhz), it MUST ID properly at 10 min intervals when in use, and a control op MUST be present at the control point when it is in use....
> packet. The main question is, are the audio in/out & ptt connections

My favorite screen of all time was the 647A. Great tube-- 100MHz.
But newer features and better triggering make it a dinosaur.
I still keep a 561A around for LF work (plug-ins are really cheap and
pretty easy to find).

I don't expect you to learn it at all. If you don't want to, then
don't.

On the other hand, you have run the relevancy crap into the ground. You
need it for HF and that's the end of that. Doesn't look as if it's
going to change anytime soon either. Gee...too bad.

In regards to earlier posts...
I've heard this wonderful argument from the no-code crowd.

Dyslexics can't learn the code.

P.S. I'm a dyslexic. I spent 3 years in the Oldman Transitional School for Learning Disabilities. I am degreed in Learning Disabilities and am licensed to teach. I went on to become a doctor, so don't tell me LD or dyslexics can't learn the code...that's simple horse crap. If true, I wouldn't have my code.

1995. FS: REPEATER CONTROLLER WITH PHONE PATCH

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-26 00:00:00 UTC
From: dwhowell@iamerica.net
Message-ID: <32ead955.3406228@nntp.iamerica.net>

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

For Sale,
Hamtronics Repeater Controller with AP3 Phone Patch. All in good
condition. All you need is a simple transmitter and receiver. The
controller also has a port for an auxilary receiver, good for linking
to another repeater. This controller was factory built, not a kit.
Comes complete with owners manual. Price is $200 shipped.

Siegfried Rambaum wrote:

>
...
> It is not the code that barres you from upgrading, it is your approach to
> it. .....

But thats not the point is it? The problem should be designed out
rather than patched over. ie change the test/s (and/or the different
licence class privileges) to something suitable, rather than continue
to make everyone pass (what may be now, and will certainly be at some
stage in the future,) an outdated exam.

> And only when you use the key and the code, you will find, that all this
> garbage about the code being outdated and superseded by digital
> communication modes, is just that: GARBAGE.

I think the issue is that the (morse) code *TEST* may be outdated.
Saying that morse code *hasn't* been superceded, is a dangerous
generalisation. By some criteria (eg capacity (bps), 'error' rate at a
given SNR), morse *has* been superceded by other digital
modulation/coding schemes.

> For the digital mode CW, you
> just need your ears and yiur ears. For elaborate digital modes, you need
> at least a computer, even some of the digital gadgets, like CW-, RTTY- and
> ASCII-display-readers are dedicated computers.

Yes, morse has a certain simplicity to it (which I find appealing -
though i still don't see that that makes it the prime contender for a
licence class test). On the other hand, if you are prepared to splash
out and get more equipment, you get the benefits that go with it
(increased capacity and utility). You get what you pay for. MAny hams
already have computers so the 'additional' equipment costs may not
actually be that prohibitive.

> There was one goof, arguing, that CW is totally outdated compared to
> digital modes. As an example that ignoramus cited the Jupiter probe, whose

The "goof" was (I think) trying to show that morse isn't a panacea - it
certainly isn't an optimum way to transmit large amounts of information,
especially in low SNR conditions (and we've all experienced those). We
may not be able to afford quite the calibre of equipment JPL(?) uses,
but the principles (intelligent choice of source and channel coding,
modulation type etc) *can* still be applied in the amateur arena, to
gain similar advantages.

> A little paing attention in science class at high school or at
> engineering classes about the compression and rarefication effects of
> travelling waves would tell most of the "Digital is better" guys, that
> with all the tricks involved into high speed digital, digital is also more
> distortion prone than CW.

Well they're both *prone* to distortion to the same degree (assuming
they're using similar frequencies). You just don't tend to notice it
with morse because its usually at a low speed. Overcoming these channel
impairments is at the core of advancing the radio "art". Thats the
challenge.

> Digital usually uses keyed tones over the air, two different ones for "1"
> and for "2". It thus is not a pure digital (i.e. ON/OFF) mode, but kind of
> phone mode. Sorry, guys, CW is the only real digital mode on the air if
> you go along a real pure view of digital.

Sorry Siegfried, but I think most people in communications circles,
would view CW and AMTOR, PACTOR etc as *all* being 'digital'. They all
involve transmission of just a finite number of states or symbols.

>
> > Gary Coffman KE4ZV > Destructive Testing Systems | we break it.
> > 534 Shannon Way | Guaranteed!
>
> You wont break the code, no matter how much you try.

The code will be broken - once a few "phase shifts" have been induced in
the minds of those who control these matters. I think the code test, as
an *exclusive* test for gaining certain amateur privileges will go,
eventually. The world is a changing place and no (good) set of testing
procedures should remain unresponsive to that. The question is when the
test gets changed, not if.

You too have been lead astray by that void claim. When a rptr changes
modes (AM to FM requires a complete change of equipment) *and* changes
location *and* has a change of callsign *and* a change of ownership,
then one cannot claim it is "the nation's second oldest continuous
operation repeater."

This is a false dichotomy. The amateur radio service is chartered as an experimental service while CB is chartered as a non-technical personal radio service. CBers are forbidden to design or modify radio equipment, amateurs are uniquely authorized and encouraged to do so. Morse Code has nothing to do with this, it is merely an anachronism in the regulations.

[snip]
>And only when you use the key and the code, you will find, that all this

>just need your ears and yiur ears. For elaborate digital modes, you need
>at least a computer, even some of the digital gadgets, like CW-, RTTY- and
>ASCII-display-readers are dedicated computers.

All operating modes require input and output devices to serve as man/machine interfaces. Whether it is a microcomputer or an electormechanical device makes no difference in principle. While a computer is generally chosen today for digital mode usage because it is a general purpose digital device easily adapted to any sort of digital purpose, digital modes in general do not require a computer. For example, RTTY was done with electromechanical equipment long before personal computers were invented. Even advanced systems like the Lowfer system described in Communications Quarterly Vol I, #1, do not need a computer to function. Discrete logic can suffice, though it is usually more cost effective to use a microprocessor instead.

A computer, or at least a microcontroller, has become ubiquitous as a replacement for older electromechanical systems. You find them in TVs, microwave ovens, amateur radios, autos, washing machines, and even toasters. That is because they are more reliable, more flexible, and usually more cost effective than the equipment they replace. OOK Morse users use an electromechanical interrupter and an electromechanical transducer as man/machine interface, while other digital operators normally use a microcontroller instead, and reap the same sorts of benefits as are found in other systems which have converted from electromechanical systems to digital electronics.

>There was one goof, arguing, that CW is totally outdated compared to

>if they were CW. But he forgot to mention all the signal processing
>technology involved, and the high gain parabolic dish antennas, and the
>ultra low noise pre-amps, and ... all.

Actually I said a ham *operator* would not be able to copy them if
they were OOK Morse, even with all the antennas and preamps involved.
But because they are coherent digital signals, signal processing can
recover the information which would be buried in noise for the human
listening to a speaker. One of the primary advantages of well formed
digital modulations and codings is that digital signal processing can
be effectively applied to them.

Back in the era when NASA was designing Voyager and Galileo, such
processing was exotic and required a room full of equipment. Today
we have that sitting on our desks, or in some cases tucked in our
coat pockets. Voyager was designed with mid-60s technology, IE
when transistors were just widely replacing vacuum tubes. It does
not employ a microprocessor, and the processing computer on the
ground was a mainframe with performance equivalent to a HP200LX
pocket computer of today. Meanwhile, many of us have Pentium systems
with performance equivalent to a Cray 1 sitting on our desks today,
and that allows us to do much better than the Voyager earth station
could do in terms of processing weak coherent digital modulations.
That's a step as large as the one between a FT1000D and a coherer
and loose coupler.

It is obvious that a little knowledge is a dangerous thing, and you
exemplify that perfectly. Almost everything you say below is incorrect,
incomplete, or a non-sequitor. Lets address them one by one.

>What he ignored to see, is that
>digital and morse code are both carriers keyed on and off.

First error. Morse is the only remaining text mode using OOK,
which is a form of AM modulation. Modern digital uses one of
FSK, FFSK (aka MSK), m-ary FSK, PSK, BPSK, QPSK, m-ary PSK,
OQPSK, ASK, QAM, m-ary QAM, or OFDM. Most of these have a
low crest factor. 2FSK has a crest factor of 1, IE there is no
variation in transmitter output power with changing modulation
symbols. In other words, they don't key a carrier on and off.

This has consequences. One of them is that transmit Eb/No is
a minimum of 3 db better for these modulations than for OOK.
An additional 3 db is gained over OOK because the Hamming
distance in signal space is doubled over the case of OOK in
noise. This means that even poor old BPSK has a 6 db advantage
in noise over an OOK signal with the same peak power output.
There are also further coding gains, which can't be applied
to manual Morse, that can add up to another 30 db of process
gain.

>They differ in
>the following respects:
>
>- Morse code, on/off-keying of variable duration
> Digital on/off-keying of fixed durations

As noted above, modern digital does not use OOK modulation, but
you get partial credit for realizing that modern digital uses
uniform codes. This is a major win, especially for the coherent
modulations. It means an optimum channel filter can be implemented,
which can't be done with variable duration symbols, and it means
that slicing can be done at the optimum point in signal space.
Both of these factors represent huge wins in effective Eb/No
performance over variable duration symbols.

>- Morse code, no phase shifts
> Digital phase shifts involved, when getting beyond 1200 baud

Actually, all modulations have phase shifts involved. For OOK with
rectangular pulses, it is sin(x)/x. This has consequences for the
PSD (power spectral density) of the resulting modulation, and for
symbol smear, IE ringing on receive. Rectangular pulse modulation
has a particularly ugly spectrum because a squarewave is made up
of all odd harmonics from the baseband fundamental to infinity by
definition. This is easily demonstrated by doing a Fourier transform
of the impulse (or just looking at the spectrum analyzer). Harmonics
past the 5th can often be filtered out without significant loss of
Eb/No, so in practice rectangular pulse basebands can be considered
to have a finite bandwidth. Note, however, that these sidebands *are*
the modulation, and can't be completely filtered off.

Modern digital techniques use a shaped baseband response to prevent
the bandwidth expansion inherent in rectangular symbols. Two favored
methods are the raised cosine impulse and the Dolph-Chebychev impulse.
Both offer a much reduced occupied bandwidth compared to rectangular
impulses. (Clover uses Dolph-Chebychev shaping.)

>Actually, to get the high bit pumping speeds with digital involves a lot
>of phase shifting, flank steepness forming, and other tricks. And this
>actually is one weak point of digital over the air on HF. Weren't we
>talking 1.8 thru 30 MHz in this comparision? Fading, multiple skips,
>flutter fading, sporadic e, sporadic f ... Lots of phase shifts involved,
>and flank steepness deformations....

All signals propagated via the ionosphere suffer phase shifts and
multipath. Those which are properly shaped at the transmission point
retain an advantage all the way through to the receiver over crude
rectangular impulses however. Of course modern digital techniques
can also use adaptive equalization in some cases to correct these
channel imperfections, manual Morse operators for the most part can't.
This has consequences too. More of the PSD of the signal is recovered
with modern digital techniques than can be recombined in the brains
of OOK Morse operators, thus symbols retain a greater Hamming distance

in signal space, effective Eb/No is better, and BER is lower.

>A little paing attention in science class at high school or at
>engineering classes about the compression and rarefication effects of
>travelling waves would tell most of the "Digital is better" guys, that
>with all the tricks involved into high speed digital, digital is also more
>distortion prone than CW.

If you hadn't been doodling in your notebook during the class unit
on Maxwell's equations, you would know that electromagnetic waves are
not compression waves. If you'd paid attention during your courses on
digital modulation and coding, you'd know that shaped impulses perform
better on the HF channel than rectangular impulses. Ah, well, a little
knowledge is a dangerous thing.

>And then, you get more bang for the watt by morse. Morse just uses the
>carrier frequency, thus puts all energy just onto one signle frequency.

Slept through the modulation unit too didn't you? OOK is AM (in a sense
extremely overmodulated AM since it swings from cutoff on negative peaks
to saturation on positive peaks), and it is the sidebands which contain
the information. It is not a single frequency. A very fundamental fact
of signaling theory is that the minimum duration of a symbol is related
to the occupied bandwidth by T=1/(.5*Bw) or T=2/Bw. This means, for example
that a bandwidth of 2 Hz can only support symbols of 1 second duration or
longer, IE 1 baud, or that a bandwidth of 10 Hz can only support symbols of
0.2 second or longer, IE 5 baud.

Now 20 WPM Morse has an effective baud of 16.667 (average, due to the
variable length elements of Morse coding, peak baud is actually higher than
this, IE dots are shorter than dashes) which corresponds to an element
duration of 0.06 second. Using the relation above, that requires a minimum
occupied bandwidth of 33.33 Hz. If you try to use a narrower bandwidth
than that, all you'll recover is a constant unmodulated carrier, IE
you have filtered off the modulation sidebands and are left with only
the AM carrier. (This may seem counterintuitive, but we are familiar
with it in another context, IE the bandwidth restricting tank in a
Class C amplifier turns the pulses from the PA into smooth sinewaves.
We often use the "flywheel" analogy to explain this, but it is actually
a result of the fundamental signaling bandwidth relationship.)

Now this still looks pretty good, but we haven't yet added in a
very important factor. Remember above what Fourier tells us about
a rectangular symbol? It is composed of all odd harmonics of the
fundamental. If we cut off those harmonics, we cut off a significant
part of the signal energy, and thus suffer degradation of Eb/No.
We can ignore harmonics above the 5th without serious Eb/No loss,
so the practical minimum bandwidth for a weak 20 WPM OOK Morse signal
is 166.65 Hz. (90% of the spectral energy of a 20 WPM signal using
ARRL recomended waveshaping actually occupies a bandwidth of
approximately 250 Hz.) Note, if the signal is relatively strong,
we can use a tighter filter, but not tighter than 33.33 Hz for

20 WPM, at the expense of a degraded Eb/No. In other words, we
can choose to throw away some of the signal energy in order to
achieve interference rejection on a nearby signal if the desired
signal is strong enough. For optimum weak signal recovery, however,
we want all the signal energy we can recover.

But using raised cosine baseband shaping, we can transmit a modern
digital signal of 16.667 baud in only 66.66 Hz of occupied bandwidth
(at the 90% PSD point). That's about 3.75 times better than OOK Morse
can achieve. *And we can use symbol overloading*, IE more than one
bit per baud can be encoded. Manual Morse can't do that. So our effective
information rate can be several times higher for the same CNR as an
OOK Morse signal, or we can keep the same information rate and work
with a CNR several times lower than OOK Morse.

The main reason OOK Morse adherents claim good weak signal performance
for their modulation is that it operates at a very low baud. But it does
so in almost the worst possible manner. When modern digital signals are
operated at the same baud, their performance can be very much better.
(We usually operate at a much higher baud, however, because we don't
need ultimate weak signal performance on most HF circuits.)

I have only mentioned briefly in passing the process gain we can achieve
with modern digital. In many ways this is much more significant than the
improvements modern digital brings to raw modulation performance. FEC allows
us to operate at lower signal levels because we can *correct* errors in
reception, IE recover bits too weakened by noise to be recoverable by
demodulation alone. This is very powerful (and the second reason Voyager
and Galileo have such spectacular weak signal performance). Up to 30 db
of process gain can be practically achieved using modern FEC techniques.
(Note, this process gain relates to CNR, which is not necessarily the
same thing as Eb/No for modern digital modulations. Shannon sets a hard
limit of -1.6 db Eb/No for *any* signaling technique. Nothing we do can
beat that.)

>Digital usually uses keyed tones over the air, two different ones for "1"
>and for "2". It thus is not a pure digital (i.e. ON/OFF) mode, but kind of
>phone mode. Sorry, guys, CW is the only real digital mode on the air if
>you go along a real pure view of digital.

"1" and "2"? Normally, we use a binary baseband with symbols standing
for "1" and "0" by convention. Antipodal modulations actually deliver
symbol values of +1 and -1 from the slicer (which we arbitrarily rename
"1" and "0" in the baseband), giving us a Hamming distance of 2, and
hence the 3 db gain in reception over the symbol values of +1 and noise
of OOK.

Digital systems are discrete systems with a finite number of states.
Analog systems are continous systems with an infinite number of states.
It is fundamentally easier to separate discrete states from noise than
it is to separate an infinite number of states from noise, so digital
systems are inherently better than analog systems on the noisy channel.

OOK is an inferior way of encoding discrete states, and Morse is an inferior coding, because it uses variable duration symbols. Morse actually has 5 discrete states, IE dot duration, dash duration, intracharacter duration, intercharacter duration, and interword duration. Only two of these states are encoded with signal energy when OOK is used. That means that only 40% of the information is transmitted. The rest has to be inferred against noise by the operator.

And variable length elements mean that an optimum channel filter can't be constructed to recover the energy which is transmitted. As shown above, the optimum bandwidth of the channel filter is related to the duration of the element being recovered. No one filter can be designed to optimally match a number of different symbol durations. Thus Eb/No will always be degraded for variable length symbol codes when compared to uniform length symbol codes.

This is all pretty basic stuff. Anyone with an interest in the technology of radio signaling should know this. Of course if they are non-technical personal radio service users, they'll probably get it totally confused as you have. BTW, doesn't that bucket of salt water you keep in the trunk of your car to improve your mobile ground slosh all over everything?

2011. ForSale: 37' Telescoping Mast, $45

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-26 00:00:00 UTC
From: gvs@netprose.com
Message-ID: <32ead0f1.59265722@srv2.sj.ablecom.net>
Source record: 206313
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

Telescoping Mast for sale
in San Jose, CA.

37 foot Telescoping Mast, material is schedule 80 PVC Tubing,
in 4 sections, with O.D's: 3.50", 2.75", 2.25", and 1.75". The
sections are held in place by a u-clamp and thru center eye-bolt
arrangement. Each u-clamp has 2 outer eye-bolts, along with the thru
center eye-bolt, which are used as guy points.

The bottom 3 sections use PVC sched 80 reduction union joints (very
beefy) which I reamed out to allow upper sections to slide thru
freely. The three over-lapping sections are over lapped by 12, 16,
and 18 inches, from smallest to largest dia., respectively. Each
upper section has 2 sets of 3 spacer bearings that take up the
excess play inside each over-lapping section.

As you may well have gathered, I have an Engineering background
and took some time designing this Telescoping Mast. It wasn't
something I just threw together.

The last 2 years in San Jose, CA, has brought storms with winds as
high as 75 mph. This Mast barely moved during these storms. Also, I
use three sets of guys which are marine-type nylon rope that is UV
resistant.

Mast is more durable and can withstand higher wind speeds than
a steel mast, when guyed properly. Also, Mast doesn't interact
with antenna like a steel mast would.

>

Hi Mike,

Many amateurs use both means, depending on what sort of operating
they are doing at the moment.

For casual "ragchewing" operations under good conditions, you may
prefer the speaker and desk mic arrangement. It allows you to move
around the shack, hear other conversations in the room, etc., etc.

The use of headsets may be preferable to you under poor signal
conditions, or when the speaker might interfere with other people in
the room who are watching TV, etc.

The "boom mic" on the Heil headsets is also handy when you want
"hands-free" operation, such as during a contest when you use your
hands to log on a keyboard. (Use VOX or a footswitch to key up the
transmitter.)

>I have nothing against homosexuals

Why does everyone have to dance around the issue like this, in an effort to be politically-correct? ("I have nothing against them, BUT...")

I do have something against them, and I make no bones about admitting it. I have a problem with their perverse behavior and the resulting consequences (AIDS, etc.) from their actions. Most of all, I have a problem with their repeated attempts to legitimatize their "liefstyle" by indoctrinating our children through the public school system and with their attempts to have special rights legislated on their behalf.

Carl,

Your license provides you with access to at least 4 HF bands plus the
LoFers.

Go for it!

Sure you would. But that's not what we're talking about. A more apt
analogy would be you paint a painting to sell, and I like it so much
that I paint a copy for myself. I deprive you of intellectual property
rights, not physical property rights (which is what I would be doing
if I "stole" the physical painting that you painted.)

On UseNet we frequently see messages asking for more information about the hobby, and how to get started. This message is a VERY brief attempt to explain the hobby and give some pointers on where to get more information. Almost certainly I won't answer all your questions, so feel free to ask for help on the newgroup. Hams are famous for their eagerness to help newcomers.

(First I have to explain something you might not have realized. In doing so, I'm going to paraphrase something written by Steve Ford, WB8IMY, in his introduction to a book entitled "The ARRL Operating Manual".)

In case you didn't know, belief in magic is a necessary requirement for all Amateur Radio operators. Of course, you won't see a question concerning magic or metaphysics on the test you take to obtain your license, but in your heart you will come to believe in that powerful, intangible force.

All of us in the hobby have felt its influence at one time or another. Some night when the band is dead as a doornail you'll be tuning aimlessly, not expecting to hear a single signal because NOTHING could be coming through at that hour. But then, rising out of the noise like a ghost, there will be a faint call from another stalwart explorer thousands of miles distant. You pounce, establish contact and both of you marvel at the fact that the conversation is taking place at all. A few minutes later, however, the signal vanishes as quickly as it came. Your rational mind will shrug it off as a quirk of propagation, but that little tingle in your gut will tell you otherwise.

If you could travel back in time to, say, 1297 AD, you'd probably be burned at the nearest stake for even suggesting that two human beings could communicate with each other over great distances without a physical connection. No doubt they would accuse you of dabbling in magic -- and they'd be right!

As Amateur Radio operators, we work feats of magic every day. Many of us have become jaded about our powers and we tend to dismiss them as commonplace. We hardly think twice when we use our equipment to sommon the elemental forces of the universe. But every so often we need to pause and remind ourselves of what we are really doing. We need to

remember the essence of what drew us to our unusual avocation in the first place: the wonderful magic of wireless communications.

So how can YOU become a magician?

First, you need to prepare to obtain a Magicians License. The Federal Communications Commission calls them Amateur Radio Operator Licenses, and they come in 6 "classes".

There are two "entry class" licenses, namely the Novice and Technician class. These two classes of license are designed to give the newcomer access to a number of frequency bands without a too-strenuous examination.

The Novice class gives the widest range of frequencies, and will be attractive to folks with a desire to talk to "distant" places. The written test is the simplest of all the tests, and the examination also requires you to be able to copy Morse code at 5 words per minute. This license will also give you access to some "local" bands, but not as many as the Technician class.

The Technician class license, as the name implies, is aimed more at folks with a technical bent (you don't have to be an electrical engineer though). The written test is a bit more difficult, but you don't need to know Morse code for this license. The frequency bands for this license give you more "local" communications, although if you wish, you CAN take the Morse test, in which case you will also get access to the "worldwide" bands the same as the Novice class. This extension of the Technician license is know at the "Technician Plus" class.

The next three classes of license are General, Advanced, and Extra. These three classes have access to portions of all amateur bands, with progressively more difficult exams, and requirements for copying faster Morse code (13, 13, and 20 words per minute respectively).

To prepare for the exams you will need some study material and more information about classes, examination points (the exams are given by volunteer Hams in your community), and clubs in your area. A number of organizations will be more than willing to help. One such organization is the American Radio Relay League. Write them at:

ARRL 225 Main Street Newington, CT 06111

or call them at 1-800-32NEWHAM

or point your net browser to "http://www.arrl.org" and follow the internal links to the newcomer areas.

Ask for their "Prospective Ham Package". It will include more detailed information, a list of classes and clubs in your area, and a list of scheduled examinations in your area also.

If you are near a Radio Shack store, go there and ask for a book entitled "Now You're Talking". This book is also available from the ARRL. It contains all the information you need, including study material and sample questions for the examinations for Novice and Technician licenses.

Good luck, and welcome to the "magical" hobby.

Maybe you don't think so, but I do. I like to listen for the sounds of a satillite coming up over the horizion. I like to listen to a band open up to a distant part of the world. I like working weak signal CW. What's wrong with that? Of course there are more effective techniques. I support their use too. Just because I don't use them at home, I don't justify bashing someone that uses them. Maybe radio doesn't have to be mystical, but it has to be exciting.

Who would help me ?

I'm intrested in everything about ACARS
I have found a schematic to build a ACARS interface. I can't test the interface because i don't have the program to decode them.

Who would like to send me decoder software via email ? (something like LOWE)

I'ts above my budget to buy a LOWE interface with the software, if i could test my interface i could affort it.

So to all spotters, radio amateurs... who send me software to decode ACARS (maybe there is schareware to decode them ?)

If you have any other suggestions to help me and it's about the ACAR system, be free to email them.

THANKS VERY MUCH !!!!

If you take a picture of it without the permission of the artist, you can
be held liable for copyright infringement (filing is not necessary,
production of the original work is all that is required) in federal court.
The fine is up to 15,000 per occurrence, just ask my ex wife who "borrowed"
slides and distributed them.

As far as those giving a s*it or not, you forgot to ad "doesn't care about
asset management" to your resume. Hope any future employers don't read
your posts.

Mark

We all know that 2 meters is a vast waste land, even packet is
far slower than the internet and repeaters are the bowels of this
HOBBY (in fact bowels are frequenty talked about in medical passings
on the air). So the Little Leo people have a good use for 2 meters,
in a new never before seen spirit in ham radio (giving rather than
taking) let them have 2 meters!.

Ah but if you express this distaste and voice these views "they" try to label you a bigot and racist. I still fail to understand what a person's sexual preference has to do with amateur radio. Why should it be mentioned in the first place? I don't get on here and expound on the pleasures of hetro sex - who gives a crap? It has nothing to do with our interest in radio.

I do not dislike or like people because of any category theiy may fall into. People are too complex for that. I have some friends who are homosexuals but I became aware of their proclivities after I had gotten to know them and it doesn't really matter. But they don't flaunt it - and keep it pretty much in the background where it belongs.

This is where my experience is completely counter to your repeated claim. In my circle, the Hams who design and build their TX's and RX's are CW'ers. Those in my circle who are no-coders simply buy their HT's and talk (no disrespect to them intended, it's just my observation).

If, as you claim, the CW requirement is keeping out all those who would otherwise design and build equipment, why are there none doing this on 6M and up (again, in my circle), where there is no CW requirement?

Maybe my circle is unusual, but given what I have read on Usenet, I suspect not.

--

Cheers,

Chris. Broadbent (KC5VQL)

NOTE: My email address in this post is modified to prevent spam. Just remove the '.nospam' from the end of it if you wish to email me. It sucks that I must do this, but the amount of unsolicited crap I'm receiving now makes it necessary.

You expressed your points rather well, Jim. Glad to see it.
It has struck me all along, in fidonet echoes, and elsewhere where I heard the code vs no-code debate, that we're talking about apples but debating oranges.

>code can be used above 30 MHz by those individuals who have not
>taken the test, why is it necessary to take a test for operation

This is the only reason, international agreements.

>government and that is the mitigation of interference among its
>users of the radio frequency spectrum, and with all due respect to
>Watt's viewpoint, he, like many others, has failed to do so with
>respect to this issue of Morse code testing.

Recognition is one thing, but, I'm one who believes in tougher theory testing,
and that Morse code, though still useful, is no longer in the mainstream of communications technology and practice, to wit, many entities which once used it are abandoning it in favor of other digital modes, even on terrestrial paths.

Recognition of morse, as it is still used, is valid, therefore, a sending test should be a part of the licensing requirements below 30 mhz, so long as it is a mode which is used.
As for speed of copying, it's irrelevant, as many folks I know who pass their 20 wpm never touch it again <g>.

I can truly say, though, that I believe the whole issue on vhf/uhf is moot, as we've a no-code license.
Eventually, I can see hf possibly going the same way, but I could never see ruling out completely some type of testing to ascertain that the licensee has some knowledge of international morse, as it is a mode which is used, even if not widely. We do, after all, test folks on knowledge of digital modes, to some degree, even if the licensee doesn't plan to work digital modes.
THerefore, completely throwing out the examination of the applicant on Morse would not be in the public interest.

> doing it?

Welcome to the hobby! Your local Radio Shack sells a book on becomming a ham. It's called "Now You're Talking", and covers all you need to know, including a study guide for the entry-level license. Also, you can contact the American Radio Relay League (ARRL), the national ham organization. They will provide you with lots of free literature, and will also put you in touch with a club in your area, who can probably help you get your license and get on the air. They're on the web at http://www.arr.org, or you can phone them at 203-666-1545; they're in CT. Best of luck...

Hi Paul,

When I lived in Fairfax, VA I was a member of the Ole Virginia HAMS.
They have a net on 146.97, Thursday night around 9:00PM. It was very
informative on the local events and happenings.

The NVFMA was a good repeate group. Their main repeater was the
146.79 machine. Try and find KC4OGC or WA4OGH, they can tell you
about the group.

I hope this helps,

73 Brad KR4IQ

>
> Unless the party on the cell phone isn't moving (like at poolside,
> sipping a Jack Daniels) -- then no handoff would ever occur.

Actually some systems will hand you off even if you are not moving.
happens to me all of the time because of my close proximity to a local
cell site. If I walk down the hall while talking on my cell phone I
will often get a hand off from one sector to another (but on the same
cell).

But even that is easy to follow because there only about 25 channels on
the site. If I am still in the building and get handed off, you can bet
you will find my call on one of the other 24 channels.

This type of following may become harder as carriers begin to implement
dynamic channel allocation. This is where a site can dynamically add
channels from (or release channels to) other nearby cells depending on
system demand.

Posting from this particular newsreader does not pick up my sig ...

However, a reverse search using any of the callsign servers would
have allowed you to discover that I am licensed as W0RLI. Have
held that same callsign continuously since December of 1953. Have
been an ARRL member since sometime in 1951 or 1952. Always vote too.

Spark! Cool! How about some AM too?
Can I dig out my old MOPA rig?
Really though ... back in 1953 we were WAY beyond that.
Crystal control and a real T9X note.
Bet these newbies don't know what 599X means ... and when was the last
time
you gave out a 459C report, or heard a real RAC signal?

2054. The actual DX rules that most hams use

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-27 00:00:00 UTC
From: Burt Fisher <burtfisher@geocities.com>
Message-ID: <32ED5C24.69EE@geocities.com>
Source record: 206106
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Rules for DXing
or
How to have more FUN on the Bands

1. If you come upon a pileup, find the exact DX frequency and slowly tune up your KW right on his frequency. Take your time doing this as it has maximum effect this way. The longer you take, the better.

2. If you cannot wait to find out the DX call sign, ask "What is the DX call sign?" Do this repeatedly until some one gives you the call, this will show all others on frequency that you are serious about wanting to work this DX. This is called sharing.

3. When you find out the DX call, repeat your call over and over again on the DX frequency, even if he is working split there is a chance he may be listening on his transmit frequency.

4. When the DX says "ABC only"- Don't believe him. If he says "Europe only" - Don't believe him. If he says "2's only" - Don't believe him. Keep giving your call "XYZ !!...XYZ !!...XYZ !! HOW COPY MARIO ?" Make sure you use his name when you call him, he may think you are some one he knows, it must work as we hear it on bands all the time so it has to be effective. Don't pay attention to directional CQs, when did any DX know what they wanted..... what matters most is what you want.

5. To get the DX to work other modes tell him you want set up a schedule later which is convenient to you. You should wait until the pileup has built up to several hundred and just before the band is about to go out, then ask him to meet you on CW, RTTY or SSB at a set time and frequency. Above all, make sure you tell him that YOU need him on these modes. This will endear you in the hearts of all on frequency, it shows that you can work more than one mode and are a well rounded amateur.

6. If you have worked the DX previously make sure you call him and tell him that he is stronger than the last 6 times you worked him this week. The DX station will want to know this. Others on frequency will respect you more, you will be recognized as a Big Gun DXer.

7. When you find a DX pileup, to bring your operating skills to a higher level and impress all those on frequency - Zero beat the DX send "QRL?" "Is this frequency in use?" This shows character and that you are truly a caring person.

8. When finally making the DX contact, give the DX some background about yourself, TX, RX, ANT, WX, how many children and grandchildren you have, where they went to college, what size bedroom slipper you wear, or

any other items of interest to the DX. This shows that you are not just a 599 kind of guy. This is most effective when the band is just about to fold.

9. After you have worked the DX you will need the QSL route. Although this will be listed on the DX packet cluster, in ARRL & DX News Letters, and on the Internet, there is not reason for you to go to all the bother of reading these sources. You can just keep calling on the DX frequency... "What is the QSL Information?". If you don't get a reply with the information after 8 or 10 calls, keep it up, your persistance will pay off, there are plenty of other stations on frequency who are waiting to work the DX who have read these publications.

++

Rules for THE FUN MODE

1. For a split operation, spend most of your day listening and transmitting on the DX sending frequency. On CW if some one calls on the DX transmitting frequency, using your J-38 at 7 WPM, send VP...UG...NP...UP. until you get it right. If the station continues to
call on the DX frequency, then send LSD...LIB...LED...LID..until you get
it right. This has three benefits, 1. Others waiting to work the DX will
be forever indebted to you for informing the offending station. 2. The
offending station will be grateful. 3. You will get some code practice
you need to get you over that 10 WPM hump.

2. For those with CW and voice memory keyers this will be easy. All you have to do is program in "UP" and "LID". For the more advanced you
can add "SPLIT"...."YOU IDIOT, WORKING SPLIT" ...Using the memory keyers
for your days activity will save your voice should you happen by chance
to have a QSO.

Hank,

Are you serious? You must live out in the sticks with no other Hams for miles.....Take a ride to the big city and you will find out what is wrong with getting as many "uneducated" Hams as possible. We already tried this on 11 meters and look what happened..... Don't go and screw up the Ham Bands.

This CW argument is the dumbest thing I have ever seen.....While you guys are trying to go No Code the Government is getting ready to sell off 2 meters & 70 cm to the Leo people. I think your priorities are in the wrong place!

>>I'm interested in getting a HAM operator's license. How would I go
>>about doing it? I live in central Utah, and I'm 18.

What is Ham Radio, and How do I get started?
- A short introduction by Hans Brakob, K0HB

Here on HamNet we frequently see messages asking for more information about the hobby, and how to get started. This file is a VERY brief attempt to explain the hobby and give some pointers on where to get more information. Almost certainly I won't answer all your questions, so feel free to ask for help on the forum. Hams are famous for their eagerness to help newcomers.

(First I have to explain something you might not have realized. In doing so, I'm going to paraphrase something written by Steve Ford, WB8IMY, in his introduction to a book entitled "The ARRL Operating Manual". Steve, by the way is a regular here on Hamnet. He acts as the ARRL HQ representative.)

In case you didn't know, belief in magic is a necessary requirement for all Amateur Radio operators. Of course, you won't see a question concerning magic or metaphysics on the test you take to obtain your license, but in your heart you will come to believe in that powerful, intangible force.

All of us in the hobby have felt its influence at one time or another. Some night when the band is dead as a doornail you'll be tuning aimlessly, not expecting to hear a single signal because NOTHING could be coming through at that hour. But then, rising out of the noise like a ghost, there will be a faint call from another stalwart explorer thousands of miles distant. You pounce, establish contact and both of you marvel at the fact that the conversation is taking place at all. A few minutes later, however, the signal vanishes as quickly as it came. Your rational mind will shrug it off as a quirk of propagation, but that little tingle in your gut will tell you otherwise.

If you could travel back in time to, say, 1294 AD, you'd probably be burned at the nearest stake for even suggesting that two human beings could communicate with each other over great distances without a physical connection. No doubt they would accuse you of dabbling in magic -- and they'd be right!

As Amateur Radio operators, we work feats of magic every day. Many of us have become jaded about our powers and we tend to dismiss them as commonplace. We hardly think twice when we use our equipment to summon the elemental forces of the universe. But every so often we

need to pause and remind ourselves of what we are really doing. We need to remember the essence of what drew us to our unusual avocation in the first place: the wonderful magic of wireless communications.

So how can YOU become a magician?

First, you need to prepare to obtain a Magicians License. The Federal Communications Commission calls them Amateur Radio Operator Licenses, and they come in 5 "classes".

There are two "entry class" licenses, namely the Novice and Technician class. These two classes of license are designed to give the newcomer access to a number of frequency bands without a too-strenuous exam.

The Novice class gives the widest range of frequencies, and will be attractive to folks with a desire to talk to "distant" places. The written test is the simplest of all the tests, and the examination also requires you to be able to copy Morse code at 5 words per minute. This license will also give you access to some "local" bands, but not as many as the Technician class.

The Technician class license, as the name implies, is aimed more at folks with a technical bent (you don't have to be an electrical engineer though). The written test is a bit more difficult, but you don't need to know Morse code for this license. The frequency bands for this license give you more "local" communications, although if you wish, you CAN take the Morse test, in which case you will also get access to the "worldwide" bands the same as the Novice class.

The next three classes of license are General, Advanced, and Extra. These three classes have access to portions of all amateur bands, with progressively more difficult exams, and requirements for copying faster Morse code (13, 13, and 20 words per minute respectively).

To prepare for the exams you will need some study material and more information about classes, examination points (the exams are given by volunteer Hams in your community), and clubs in your area. A number of organizations will be more than willing to help. One such organization is the American Radio Relay League. Write them at:

ARRL, 225 Main Street, Newington, CT 06111

or call them at 1-800-32NEWHAM.

Ask for their "newcomers" package. It will include more detailed information, a list of classes and clubs in your area, and a list of scheduled examinations in your area also.

(Continued to next message)

If you had not edited the original post, that's exactly what I said...
Be informed, Nextel is NOT cellular. The implementation of any revenue
protection software is only conjecture on my part. However the TRW and
GTE software on cellular systems WILL tag concurrent ESN's in two
geographically dispersed sites as fraudulent. It will disallow call
completion and tag a message for the 'home' switch.

>are
>pretty much digital and sources of interference themselves.

Oh wonderful ... I'm sure Boeing engineers (or Gulfstream, or Cessna) said 'EMI !? we don't need no stinkin EMI studies ! we're just going to put all these black boxes in this here space and cross our fingers and make sure they don't interfere with each other' .. or the FADEC's on the Pratt & Whitneys ...or any other critical flight system.

You can be damned sure any 'heavy iron' has been extensively tested in it's final flight configuration by the manufacturer. All those black boxes work together. Now you throw in some outside influence - like a bozo lighting up a hot rf signal near the engine controller - then you get results that 'may' have been tested in the design phase. However in the 'real world', it's another story. I will not allow anyone to use a cell phone or any transmitter in my aircraft.

I need some advice from knowing sages.... Having recently purchased my first radio I now must find the accessory equipment for it. My search is about ended (for now <grin>) except for the following.....

What are the advantages and disadvantages to having a remote speaker and desk mic vs. a setup like the Heil headsets ???? Are their disadvantages to either ??

Thanks

Mike Melland

I never argued the legality of piracy; certainly it's illegal.
However, in most states in the U.S., sodomy is illegal, and so is
adultery. Morality and ethics are matters of opinion. One man's
morality is another man's immorality.

>Also, you should be able to discuss your view without calling someone

I assume you mean *absent* compelling reasons. Typos are allowed -- I
make a few myself! <G>

As to the "compelling interest" test, I don't see it holds here. I'm
not an attorney (CPA, actually!), but it seems that compelling interest
is a legal rather than "rational" term. Perhaps an attorney can
enlighten us on the "compelling interest" definition and the
applicability to the code requirement.

I will state it doesn't seem to be that difficult to establish
"compelling interest" in a code test, however.

For example, as a CPA, the government has the right (because I act in
the public interest) to regulate the profession. Even if I have no
intention of ever practicing publically (and I haven't, and don't), I'm
still responsible for passing a test to determine basic competency (a
21-hour exam, FWIW!). Because I'm a CPA, I'm allowed to practice before

the IRS, if I desire. Even if I never do so, and have no intention of doing so, I have the priviledge to do so, and thus the government has "compelling interest."

Now, to follow the same logic, amateur radio only has meaning in the public interest (intro to part 97, albeit not explicitly stated). The introduction states the objectives of the amateur radio service, which is, in effect, the government's statement of what the public interest in amateur radio is. One of the priviledges granted is the use of CW below 30 MHz. Therefore, the government has a "compelling interest" to ensure competent operators (more in next paragraph -- don't flame yet!) in CW below 30 MHz.

As to competent -- the morse code is the encoding/decoding of information via an on-off continuous wave. It is the defacto standard of the conveyance of information via CW. Without it, you could have operators sending in series three dits, three dahs, and three dits, and explaining their operating practices by saying "I was sending BOB!" But no one understands that to be BOB, everyone understands that to be SOS, or a distress call. Basic competency (to me) involves not code proficiency, but code recognition.

Please note, this is not to take sides on the code-for-HF or no-code-for-HF debate. I just think that no-code-for-HF advocates should drop the "compelling interest" argument. I'm convinced it will not achieve the desired result. I'm further convinced that, vice Part 97 "public interest" tests (in which we aren't faring so well), the government has no "compelling interest" to license us at all, or grant us spectrum *anywhere*. The biggest threat is above 30MHz, granted, and that is why (IMHO) the ARRL caved on the no-code tech license. And I agree with them for caving on that basis. We have to populate the spectrum at risk, particularly the above-UHF range, but also 50 Mhz.

As for a lack of a callsign posted on the newsgroups, I can think of several reasons not to post one, primarily that some people don't want the "malicious interference" via land-line or letter bomb that can result from a simple database lookup based on a callsign. I can't understand why someone would think of this as protection, but if they sleep better, who am I to argue with them ... Of course, last time I checked, the title of the newsgroup was rec.radio.amateur.misc, not rec.LICENSED.radio.amateur.misc.

>There are NO CW only HF subbands. The only two actual CW only
>subbnds are VHF (50.0-50.1 and 144.0-144.1) and no-coders can
>operate CW there without ever taking a test.

HA! You almost got me on this one! At least sent me to Part 97 to make sure it hadn't changed ... but of course, you are correct. The subbands are CW (allowed anywhere) and RTTY and data transmissions.

Can't RTTY and data transmission competence be tested on the theory exams? I believe they are, even on the novice exam. Could CW not be

similarly tested? (i.e., the question pool would contain available questions on each letter/prosign combination, as a "recognition test"?)

I say (and here, contrary to above, I am expressing an opinion!) we require morse recognition, but eliminate the morse proficiency exam at all levels, and return to a "guarded" (i.e., non-disclosed) question pool, and specify that morse recognition can be a part of *any* exam.

Hmmm...sounds like a petition for rule making to me ...

I think this coulod work----however I would want a very distinctive
callsign for those o hf without cw endorsement. I think one of the
great advantages to the old KN es WN calls was if the novice got out
of band etc. then an older (wiser?) ham could gnetly (or not so
gently) encourage said novice to go home. But I must say you must
remember the easeir we make it for everyone to get on HF the more HF
will sound lke 2 meter repeater land.

I agree it's not right to use the software and not contribute to the author. If you don't
want people to illegally use it then don't post it where it can be downloaded. If you think it is that good then maybe you should try to market it commercially. Stop wining about something you should have expected to happen. I would rather buy a commercially marketed program anyway!

>30 MHz.

To be accurate, it is the use of CW anywhere. CW is the
only mode that has no subband limitations as I recall. Even
no-code techs are allowed to practice CW.

> Therefore, the government has a "compelling interest" to ensure
>competent operators (more in next paragraph -- don't flame yet!) in CW

>or a distress call. Basic competency (to me) involves not code
>proficiency, but code recognition.

Then why isn't tested competency needed above 30MHz?
Bottom line: it isn't.

>Please note, this is not to take sides on the code-for-HF or
>no-code-for-HF debate. I just think that no-code-for-HF advocates
>should drop the "compelling interest" argument.

Sorry, can't do that because the ONLY reason that any
test element should exist (for ham or CPA) is if there is
compelling reasons for it. The role of government testing
is ONLY to test for that which is MINIMALLY needed to allow
the privaledges granted.

> I'm convinced it will
>not achieve the desired result. I'm further convinced that, vice Part
>97 "public interest" tests (in which we aren't faring so well), the

>us spectrum *anywhere*.

That may be true, but keeping morse code won't alter that at all,
and instead it only instills in anyone that may look into it the
believe, rightly or wrongly, that hams are married to the technology
and modes of the past.

>The biggest threat is above 30MHz, granted, and
>that is why (IMHO) the ARRL caved on the no-code tech license. And I

I don't care if people post callsign or not. I've been on this
newsgroup since day 1 and have never had a problem.

>Can't RTTY and data transmission competence be tested on the theory

>similarly tested? (i.e., the question pool would contain available
>questions on each letter/prosign combination, as a "recognition test"?)

Let's do it. I am not at all opposed to that. At least it
would eliminate the separate pass/fail aspect. Indeed, similar
questions exist already for the phonetic alphabet.

>I say (and here, contrary to above, I am expressing an opinion!) we
>require morse recognition, but eliminate the morse proficiency exam at

Congrats ...

> This information is not intended for so-called "bragging rights",
> but only to point out that there is no reason why code should deter
> young people from joining the hobby.

The fact that you decided to learn code and perhaps even enjoy it does
NOT negate the fact that many, many (perhaps most) young, computer-
savy folks today perceive the Morse code requirement as an boring and
outdated.

> These shots at young people on HF
> ("But that's better than opening up HF to young people, right?") should
> not be tolerated.

Chill ... the writer was being (very) sarcastic at the procode ass who was
insisting that everyone could "learn the code or go to hell."

> Young people are the future of amateur radio. As the
> amateur bands come under fire by more and more agencies wanting OUR
> frequencies, I think that people should be a bit more cordial to those
> young people who will be keeping our hobby and service alive on HF as
> well as VHF and beyond.

The writer of the sarcastic paragraph that you missinterpreted and I and
most
of the no-code-test advocates agree completely with you WRT young folks
being the future of ham radio ... we want to get more of you involved, but
the
code IS a major barrier to that. Again, the fact that *you* chose to learn

the
code does NOT mean that it will appeal to all (or even many) of your peers.

> Hi Goldstein,
> Even if I was a newbie (which, of course, I'm not)

Jeff ... you might as well be a newbie ... you seem to only have knowledge
in the area
of beeping using the simplest conceviable gear ... Hank is VERY well known
.. your
narrowminded pursuit of only one aspect of the ham experience shortchanges
you.

> Your buddy Hank might be famous in some area that you're interested in,
> but in 21 years of hanging out in the CW bands and building my own gear,
> I've never heard of him. Whatever he's done has had no impact upon
> my building nor my operating. I'm too busy with a hot soldering gun
> and a telegraph key to idolize anyone in this hobby/service.

Nobody suggested that you should idolize Hank, just that if you weren't in
such
a self-emposed isolation ward tha you might know something about something

besides beeping.

> I would truly like to see test questions covering our long 90+ history;

Mike,

The problem is that most current hams just want to yack and contest ...
and they want to recruit only more similarly-inclined folks and keep out
anyone who could change and modernize things.

I am not interested in simply yacking on HF ... I want to design and build
and experiment and improve our technology ... and Morse has no place in
those activities ... so it's simply a waste of time and effort.

Actually *hams* DO design and build ... however there are many current
licensees who are, as both Gary and I have said, are simply CBers who beep
and more accurately belong in one of the non-technical personal radio
services
where they can yack and act like asses to their heart's content without any
need for any knowledge of radio at all ...

==========

This thread has been discussing the likelihood of an unsophisticated person recording a long section of a cellular phone conversation. I have heard the news reports as well as seen some of the statements made here with respect to this.

A friend of mine used to have an ICOM 7000. It covered all the cell frequencies. When he first got it he was not aware that merely listening was illegal, and he listened to several cell conversations. Some would switch to a different channel often, jumping too quickly to allow following the full conversation. But sometimes there would be no jump, and he could follow several minutes of the call. Never understood why - might have been due to whether the caller was mobile or not, or might have been due to low demand on the local cell network at that time.

I have to disagree with this. Please name one person on here of *any*
age who wouldn't mind seeing more comprehensive written exams.

>and don't realize their attitudes will ruin what is left of the hobby.

Did some of it disappear? I think everyone would agree that the hobby/
service is as healthy today as it has ever been. (Of course, they'd have
to know our history to even venture an opinion. How much history do you
know, David?)

>I actually find the on air actions of
>many of
>these people to be offensive, childish and certainly not in keeping with
>a hobby

Well, there are over 600,000 hams. How many bad ones do you believe exist?
Even 0.1% (600) would be enough to be embarrassed over, but again, that's
just 0.1%!!! What about the remaining 99.9% who are good operators?

You are repeating history, though; the first doomsayers came along around
the early 1920s.

>Me thinks the
>hobby won't be worth anything if the current rate of degradation

>Interesting. Is this going to be an official ARRL petition for
rulemaking?
>
>MD

No, sir. This petiton, if filed, will be written by myself as a "private party". "Official" ARRL matters are decided by the Board of Directors, as you may know. Should the ARRL decide to comment favorably on my petition, that would be a matter for the BOD to decide. As of the moment, no member of that Board has any knowledge of the draft for a petition for rule making, such as the one I discussed in my full message.

Hope this settles the gentleman's question;

I have to go on record and state LOUDLY that I oppose the inclusion of "LAMBDA" as a sponsor of anything, which may ultimately have to do with children. Amateur Radio has no need for gender identification, and certainly none for sexual preference.
I have nothing against homosexuals, or any other group for that matter. But I do have a problem with the "in your face" tactics of groups like LAMBDA, who have used the legal system to make sure that the rest of us have to listen to their perverted crap. As I stated earlier, I have nothing against their lifestyle, so long as they keep it to themselves. If they keep pushin' us, we're likely to push back one of these days ... real hard!

A.N.A.R.T.S. News Bulletin 943 26 January 1997

COLS COLUMN

AS THIS IS OUR FIRST WEEK BACK WITH THE BROADCAST AFTER THE
FESTIVE SEASON, I WOULD LIKE TO SAY A HAPPY NEW YEAR TO ONE
ALL. I HOPE YOU ALL HAD A MERRY OLD TIME OVER CHRISTMAS AND
HAD A FEW DRINKS TO GO WITH THE DINNER AND ALL THE NICE
PRESENTS YOU GOT, OR MAYBE DID'NT GET. I GOT A 33600 BPS
TELEPHONE MODEM AM NOW ON THE INTERNET. BUT I HAVENT YET A
CLUE TO WHAT I AM SUPPOSED TO BE DOING. I THINK I SHALL BE
STICKING TO RTTY, AMTOR AND PACTOR AS MUCH AS POSSIBLE. IT
WILL COME IN HANDY TRYING TO FIND DX NEWS THOUGH.

IN THE NEXT FEW WEEKS I INTEND CONDUCTING A SURVEY OF STATIONS
THAT TAKE THE 40 METRE CAST. THE SURVEY IS TO CHECK IF MOST
STATIONS ON 40 WOULD LIKE TO RECEIVE THE CAST ON AMTOR FEC MODE.
THE SERIES ON EARLY ELECTRICAL COMMUNICATIONS WILL CONTINUE
AND HOPEFULLY UNLESS SOMETHING ELSE POPS UP IN THE MEANTIME,
THE NEXT ARTICLE WILL APPEAR NEXT WEEK. SO FOR NOW I WOULD
JUST LIKE TO SAY ITS NICE TO BE BACK AND WILL BE KEEPING MY
FINGERS CROSSED THAT THERE ARE NO EQUIPMENT FAILURES IN THE
NEAR FUTURE, ESPECIALLY THIS WEEK.

FOR NOW 73S AND CATCH YOU NEXT WEEK, DE COL VK2CTD.

Digital Journal closes

The Digital Journal has gone out of production as from 1 January 1997.

Your editor received an email message stating "Sorry to inform you that the Journal is SK as of Jan 1, 1997" following the sending of a subscription to the Journal.

The message ended - "Thanks for your support. Just sorry it is too late."

We regret the passing of this fine magazine and hope another will fill its place.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(17 JANUARY - 23 JANUARY)

ISSUED ON 24 JANUARY 1997

Date 17 18 19 20 21 22 23
10cm 74 75 75 77 74 73 73
A 2 6 6 6 10 6 (5 ESTIMATED)
T 4 18 -6 10 23 -3 18

Solar activity was very low all week.

The geomagnetic field at Learmonth was quiet 17th, 18th, 22nd and 23rd January; quiet to unsettled on 19th; unsettled on 20th; and unsettled to active on 21st.
Maximum usable frequencies were near predicted monthly values on 17th, 18th and 21st; mostly near predicted monthly values during the remaining periods with slight depressed periods on 19th and 22nd, and some periods slightly above estimates on 19th, 20th and 23rd. Spread F was reported on 17th, 22nd and 23rd January; and Sporadic E weas noted on 17th and 18th during local night.

FORECAST (24 JANUARY - 30 JANUARY)

Solar: Very low

Geomagnetic: Mainly quiet with possible unsettled periods

Frequencies: Near to 10% above predicted monthly values

Courtesy IPS Radio and Space Services.

Lack of activity probably l(.)(.)king for VK0IR

NOTES OF INTEREST:

REVILLAGIGEDO, XF. Hector is now active with the call XF1BEF and will be there until 20 January. QSL via his home call XE1BEF.

HEARD ISLAND, VK0. At this point in time the only callins for VK0IR were at 0655 and 0800 zulu 16 January. The RTTY transmit frequencies announced are 21.085, 14.085, 10.140 and 7.030 depending on QRM. 29/30 January is departure time. Come on Peter, ON6TT as you said 'We are ready to kick ass !!' Well, the RTTY gang is waiting for you.

The VK2SG RTTY DX Notes can also be found on the Internet at reflector digital-dx at st.rim.or.jp and on the OH2BUA Webcluster at URL http://www.clinet.fi/jukka/webcluster.html.

For next week's bulletin send your bandpass and notes of interest to Jules, W2JGR at W5KSI.#NOLA.LA.USA.NA

REMEMBER, DX DON'T SLEEP.
GL DE BOB, WB2CJL at W5KSI.(hashsign)NOLA.LA.USA.NA

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 288 excerpts

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N2MAU, K4PC, K4WA, WT4K, W5IJU & ISLAND/DX News, W5KSI, W6OSP, W8EB, NL7TB, AH0W, 4L5A, DL6LAU, DL7VOA, DJ5AV & DX News Letter, F6AJA, G4BUE & DX News Sheet, PP5SZ, PS7AB, RU6BV and SM0BFJ for the following DX information.

4L, GEORGIA. Al, 4L5A, states he will be very active in CQWW 160M CW Contest. He will be using a Yaesu FT-1000MP and HF2500E amp into a X-Q Quad antenna fixed on 124m tower. He will operate mainly on 1820 kHz. QSL via IK3HHX. There will be a special color QSL for this contest with a view of the antenna.

5R8, MALAGASY REPUBLIC. The 'DX News Sheet' reports Maurizio, 5R8FH, is a lay missionary in South Central Malagasy and is active on 20 and 15 meters with 80 watts and a three element yagi on Europe. QSL via I1PIN.

5X, UGANDA (IT'S A FIRST!). Leif, SM0BFJ (QSL Manager for 5X1D), informs OPDX that Gus, 5X1D, will return to Uganda at the end of January. This time he will try 2 meter EME operation (this will be the first time in 5X-land). He will run 500 watt into a 17 element yagi.

J7, DOMINICA. DL3LAR, DL8OBQ and DL6LAU will be active, February 12th to March 3th including both ARRL contests and

the CQWW 160m SSB Contest. They "might" use the callsign J75T for all contacts made.

JD, OGASAWARA. The 'Island/DX News' reports Aki, JD1AMA, is active daily on 1908 kHz and listening 1826 kHz at his sunrise at 2122z.

KG, GUANTANAMO BAY. Bill/WT4K, Jan/K4QD and Rusty/KG4AU will be active in the CQ World-Wide RTTY WPX Contest February 8-9th, as a Multi/Single entry using WT4K's call KG4GC.

P2, PAPUA NEW GUINEA. The 'DX News Letter', report Dietmar, DL3DXX, and Joerg, DL8WPX, will head for Misimi Island where they will stay from February 20th until March 4th. In Papua New Guinea, the team will be joined by Falk, DK7YY, and Juergen, DL7UFN. A licence has been promised orally. Emphasis will be put on lowband CW.

VK0, MACQUARIE ISLAND. As of the beginning of December, there are three radio amateurs who are working at the meteorological station on the island. Operators are Tom, VK0TS, who is a Communications Technical Officer; Eric, VK0KBB, in the engineering section; and Graham, VK0WG, who is attached to the meteorology unit. All have been too busy working during the crew change-over which leaves no time for amateur radio. VK0TS has plans to be active on CW/SSB mainly 80 and 40 meters.

COMING EVENTS

FEBRUARY 8-9TH CQ WW RTTY CONTEST

The reason he asked was that you signed your draft with the
email address nz2t@arrl.org. I can recall a long-time employee
of the ARRL getting fired for posting to just the QRP list using
his arrl.org address. (I wonder what ever happened to Jim...)

2077. Re: R7 on 6m and 2m

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-27 00:00:00 UTC
From: 70015.1514@compuserve.com
Message-ID: <09970024094410.OUI86.70015.1514@compuserve.com>
Source record: 206183

>> Having just purchased an ICOM 706 and having no 6m antenna, I connected the R7 to to the 706. The SWR was 3:1 or less across the 6m band and using a HF tuner, the 706 reports 1.5:1. Also tried 2m and it seems that the 706 is happy with the R7 across the 2m band also. I worked Michigan and several other states this weekend during the contest on less than 100w on the R7. This is amazing given the trap loss and the cross-polarized signals on 6 SSB. <<

I have been using an R5 on six meters for about a year. My swr was even lower than yours, at least around the ssb frequencies. Works fine for sporadic E. Only local/groundwave signals will be affected by the polarity of the antenna. Sigs bouncing off the e or f layers get all messed up anyways. What goes up vertically polarized may come back any number of ways. With groundwave you will have a 20 db loss.

Have fun. 73 de Dave, N0IT

2078. QTH/QSL resource for nonUS hams requested

From: cwop@aol.com
Message-ID: <19970127070101.CAA17616@ladder01.news.aol.com>
Source record: 206185

I suspect that your good SWR readings are because of very high losses at those frequencies. If you had a 100' of RG58 that was connected to nothing and laying on the ground, it too would show a good match at VHF/UHF frequencies because of being so lossy. However QRP does work and what is left will be radiated and you will get out. I found that on the other end of the spectrum the R7 also works. It actually has a resonance just below the 80 meter band and will work with a tuner(To satisfy the shutdown final protection in my rig) in the CW area. My guess is that this is inefficient also but heck I have made several QSO's which otherwise would not have happened, and some with good reports. 73 CW OP

Hello!

May be you will interested in this information.

Our firm, "HAMILTON GLOBAL MANAGEMENT" is the distributor of
"BSS" company, St. Petersburg, which is the producer of the GMDSS -
TRAINER. It was created in compliance with international requirements
of ITU, IMO, and INMARSAT for preparing and attestation of marine
specialists for work in GMDSS areas A1, A2, A3, and A4.

The learning environment of the Trainer is based on the teacher's
handbook in the field of GMDSS. It's kept in the informational
database of the Trainer, in form of a classical Hypertext and provides
the user with main information on all chapters of the training
program.
The database contains texts, color pictures, video films, graphic
maps, data of coast radio station, etc.

Practical tasks are implemented by a complex of hardware radio
communication means (in form of active representation on display's
monitor), instruction for their operation, and informa-tion for
on-line radio traffic in case of distress, emergency, activities to
ensure navigation safety, as well as for commercial radio traffic.

We also have demo version (size of it is about 2.5MB) and we may send
it to you if you are in interest.

Your faithfully,

Alexander Nikolayev

I'm not an attorney yet, but I think I can nevertheless answer the question about "compelling interest" in relation to the FCC code requirement (to which I am opposed).

Fact is, the government doesn't have to have a "compelling interest" when it regulates things. Except in cases relating to race or sex discrimination, the usual standard is "rational basis." Rational basis is extremely deferential to the government; it basically means that the government can do as it likes.

That ain't the way we're gonna get rid of the code.

BTW, I'm also a CPA.

Here we go again! It seems the Lambda gang are not content to leave sleeping dogs lie. Last go-around I didn't understand what sexual orientation had to do with amateur radio and all the flaming (you should pardon the expression) didn't change my mind at all. Who cares if a person is hetro, bi, queer, celibate, etc? Why do these people feel it necessary to flaunt their abberation in the faces of the public including children? The League wimped out on accrediting them as a ARRL-affiliated by knuckling under to threats of legal action. Now they are just trying to stir it up again.....

I wonder what one would have to do to get their award? Perhaps a WAQ (Worked All Queers) of WAF (Worked All Faggots). Hmmmmmmmm???

Michael Crestohl, W1RC
mc@shore.net

I still don't like the way they snatched the word "gay" from the language and changed its meaning. I have always liked the Australian term 'poofter'!

Once again the wrath of the pompous putz strikes. Once again the Monday
morning quarterback, the armchair general, the do nothing but critize
Carl the simpleton speaks out.

But then again, Carl was rooting for the Patriots till it looked like
they were going to lose and then began rooting for the cheese heads. So
typical of someone of obviously inferior mental stock. Definitely a
product of the American education system and a 60's lifestyle.

Poor Carl..a loser for life but to stupid to realize it.

Granted, perhaps no shareware author has yet to take someone to court,
but most shareware licences read to the effeect that the use of the
software with out payment is *only for a set period* and that use
ofter that period is not authorized. Use beyond that point becomes a
violation of the terms of the licence, which you in effect agreed to
by using the software in the first place and thus illegal. The
arguments will undoubtedly reign until one of the shareware authors
with the resources (PKWare, McAfee, etc) hauls one or more delinquent
users into court.

Try driving a car after your temporary permit expires without buying
licence plates. That's illegal too. :)

>it.

Sorry, but that is illegal if you took it without permission. The fact
that no permission was given for its use makes it theft in the eyes of
the law.

>You don't need to respond to this since you obviously have no concept of
>morality or ethics.

Please, note that the built in SWR indicator does not work on 2 m, so
you will get a low SWR indication even if nothing is connected to the
antenna connector. The SWR indication is awailable only on ANT 1
connector (below 60 MHz).

>>
>> Paul OH3LWR
>
>Your error is in the assumption that a "1" and a "0" constitute a symbol
>.. they are
>each symbols

Blush, I once made the same error dealing with a biphase waveform,
which might have a transition in the middle of the period and forgot
the transition in the beginning of the bit period.

Gary is right that for 20 WPM OOK Morse, the dot time is 60 ms and the
symbol rate 16.66 symbols/s and thus 16.66 bauds (and not 8.33 as I
errorously stated).

However, my derivation of the fundamental frequency of the baseband
signal, 8.33 Hz is in agreement with experience from video signals,
simulations with a DSP package and also with the parameters for
Coherant CW (QST May 1981, with 12 WPM, 100 ms dot time, base band
frequency 5 Hz and receiver filter notches 10 Hz from the carrier).
Thus, I am quite confident that the RF-sideband corresponding to the
5th harmonic of the 20 WPM keying waveform are 83.33 Hz apart (and not
166.66 Hz apart as Gary had calculated).

> and you're getting your 3dB of erroneous improvement by
>erroneously halving the symbol rate.

I was not comparing OOK Morse with any other modulation method, I only
compared my results with Gary's results and after you pointed out my
mistake in the baud rate calculation, the only disagreement is the
required bandwidth. I get 83.33 Hz and Gary gets 166.66 Hz and thus
our results differ by 3 dB of noise power and all other asumptions are
the same.

2095. Re: Repeater Coordination in NJ?

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-27 00:00:00 UTC
From: HWDX09A@prodigy.com
Message-ID: <5cicuc$2hhi@usenetz1.news.prodigy.com>
Source record: 206201

Bill and Pat,

After all the troubles getting TSARC restarted it is a shame that it is again out of business.

The startup of TSARC as everyone in the area knows was tainted by improper coordinations issued by Andy Funk KB7UV which led to TSARC's reversal of his actions and 2 years of arguing which saw all the officers resign and new ones try to solve the battles.

While the battles were solved, little else took place. Submissions to the ARRL Repeater Directory were wrong. Tom trying to handle it all on his own submitted years old 144 listings not knowing how bad the prior band coordinator had been. Many clubs battled amongst themselves. One club even voted out its founder because they couldn't believe the old data listing him was a mistake.

Having been involved in the problems of the restart and an officer for a while getting things back together I was approached last October at the NJ ARRL Convention by TSARC VP Don W2GEZ and was told that everything had collapsed as the treasury was not transferred from Rich Sandell to the new Treasurer Mike Sharferstein and that there was no money to rent a meeting location. Don told me that the current president is Bob Drastura (2X1 call) in New Jersey.

There should be a meeting notice in February 30 days prior to the annual meeting for election of officers. When the last breakup happened I got permission from the secretary to call a meeting. Should there be no notice of a meeting in February as reguired in the By-Laws I will again contact any remaining officers and work to call a meeting. Technically the next annual meeting is due for the NYC-LI section in March 1997

> anyway!

I'm sorry, but that isn't the way it works. Shareware authors want to make it convenient for people to obtain and evaluate the product. That is a good thing (for most people....you apparently are different). Then a user can pay a minimal fee for a license, which may even include aditional functionality, documentation, etc. Your fee is kept small because you are not paying the enormous costs of packaging and distribution. That is a good thing (for most people....you apparently are quite different).

Shareware authors know that there are many dishonest people around and understand that they will abuse the above system, which, for most people, is a great way of distributing software. If it weren't for thieves, you would see the majority of software distributed through the Internet and in similar ways, and the cost and hassle would be reduced and you would get to try before you buy.

Your little "proposal" that this system be eliminated is silly and not well thought-out.

2097. Re: Vanity Callsign Pgm on Hold

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-27 00:00:00 UTC
From: HWDX09A@prodigy.com
Message-ID: <5cidir$1cua@usenetz1.news.prodigy.com>
Source record: 206203

The delay in processing Vanity callsigns was announced when people told the FCC that callsigns that should have been available were not being issued. The FCC verified these callsigns and put further processing on hold until they could check why these calls were not found available.

The FCC found over 3,300 callsigns that should have been available that were not recognized. Older applications found 4 that could be filled with these missing callsigns and those are being handled.

The FCC is looking to clear its WIPS backlog and then hopefully restart Vanity proessing now on 2/1/97

People questioning the issuing of some 1X3 W's to Tech Pluses should look at the processing designation. All these are issued to close relatives. They have assumed callsigns of deceased parents, etc.

As a node code tech who wants to work HF someday -

I don't mind struggling to learn 13 WPM. I think that hams should be more than just snobby CBers. In emergencies, CW may be the only way to communicate. Satellites, the Internet, and more modern forms of communications can't withstand natural disaster. An old set of non-semiconductor radios with a generator is still the most reliable means of communications when all else fails. Hams have to know how to use it and maintain it. That puts this hobby above all else.

Fewer people are playing with code but fewer people are also in it because they love radio. HF isn't bogged down with the same crap as the click-ridden phone-fm dredge as 2 meter is. I'm stuck with it 'til I upgrade, then I am looking forward to having fun until no-code takes over and it becomes like 2 meter is now.

>

I don't believe that Watt is able to do so. He is unable to do so because there is no evidence that knowledge of Morse code is relative to the government's legitimate interests in mitigating interference amonst the users of the radio frequency spectrum. Indeed, that fact that it has been (or in one instance, about to be abandoned) by all other users would be in contradiction to Watt's notion.

> For example, as a CPA, the government has the right (because I act in

> "compelling interest."
>

Agreed. However, Watt has failed to show the Morse code testing for amateurs has a "compelling interest". Based on the government's interest in mitigating interference, under what circumstances would Watt think otherwise?

> Now, to follow the same logic, amateur radio only has meaning in the
> public interest (intro to part 97, albeit not explicitly stated). The

> below 30 MHz.
>

But why is it limited to below 30 MHz? What is it about the operation of an amateur station on the frequencies above 30 MHz that precludes the knowledge of Morse code? Indeed, since Morse code can be used above 30 MHz by those individuals who have not taken the test, why is it necessary to take a test for operation below 30 MHz (notwithstanding the international requirement)?

> As to competent -- the morse code is the encoding/decoding of

Perhaps, if there was a compelling interest to do so, but there is none.

>
> Please note, this is not to take sides on the code-for-HF or
> no-code-for-HF debate. I just think that no-code-for-HF advocates

> not achieve the desired result.

I can only agree with Watt on this notion because I believe that most of the "compelling interest" arguements offered by many of my fellow no-code testing advocates are indeed disassociative to the arguement. There is only one "compelling interest" by the government and that is the mitigation of interference among its users of the radio frequency spectrum, and with all due respect to Watt's viewpoint, he, like many others, has failed to do so with respect to this issue of Morse code testing.

I'm sure they were, Jeff. You misunderstood the concept I am afraid. You took a semi-conductor radio and did not convert it back into a Tube set. Any audiofeelie will tell you that tubes are where it's at. They sound better and reach out farther. (You should also paint a ring around your microphone in green magic marker so that you properly contain the audio without any nasty internal reflections.)

Now where was that old KW for 6 meters made out of a BIG bunch of paralleled 6CL6's? THAT is the way to do it. (I think the guy was at an AF base in Ohio and had been ordered to dispose of those octal monsters. So - he did the RIGHT thing and made a KW amp out of them. Popped 'em like corn he did!)

I find hard to believe that there are so many "ham cops" on this forum. I notice that everytime anyone uploads a message for technical help, a barrage of rules and regulations is sent back which wasnt even asked in the first place.
The latest? check out the question about an autopatch via the packet connectors. The answer? the guy who answered sent in details of FCC rules and even wanted to know the questioner's callsign? Why? Send it to the FCC?

It is this stupidity that is killing the ham radio service. Or havent you noticed that upgrades are down; new hams non existant and that at this rate and since the average age of hams is way up in the 50+ or 60+ the hobby is going down a quick death?

At least then, you wont have any usenet for others to hear your sytupiod comments.

C'mon guys! give the "cop aspect" up and support the hobby; at least support the technical nature of it and answer the questions straight.

Nothing. But why should it's knowledge be required in order to obtain a
government-issued license to operate a radio transmitter? Compelling
interest no longer exists; that's the legal argument for removal of the CW
barrier.

You know, it's fairly well known that as well as pirate software, all hams are fat. THEREFORE, I resolve to raise awareness to this issue!

Please diet! It's immoral, unlawful, and unethical to be so large! What you're doing is wrong! Your health care costs are sucking up money from all of us law-abiding skinny people, and it needs to stop.

Every day, men and women pump money into health spas and treadmills so as to increase the length of their life and lower health care costs. Yet, all of these fat hams keep eating their ice cream and fudge and drive up health care costs.

Thankyou, and I hope that you all realize the harm that you are causing!

2125. Re: Lambda ARC Co-Sponsors ARRL Award

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-28 00:00:00 UTC
From: Jim Kelly <skeptic@netaxs.com>
Message-ID: <32EDE7A8.2115@netaxs.com>
Source record: 206031

It's no surprise that the usual assortment of bigots including the men's room expert from Hawaii and the self-identified maniac from Sunny Central Florida have spewed their anti-gay hate again in this newsgroup.

While I can't be bothered wasting a single ketstroke responding to their bigoted, hate-filled garbage, I will address the question "Why a gay ham radio club?"

The answer is that many hams form associations based on shared experiences, characteristics, or interests, such as veterans, employees of big companies, school and college alumni, physically challenged persons, women, people of color, etc. Ham radio is a special hobby in that it affords us a unique avenue to explore those aspects of our life that we have in common with other people.

But more than that, LARC is needed for those hams who are gay, bi, lesbian or transgendered who live in rural or out of the way places and thus are isolated form the sexual minority communities in the major cities. By joining LARC these hams can benefit from the support and comaraderie that comes from a close association with other gay hams.

Finally, there are young gays, BIs, lesbians, and XGENs who often have a tough time dealing with societal homophobia and the misguided disapproval of their family and peers. These young people need positive gay role models and they need to know that they're not alone. LARC can help out in this as well.

Maybe someday the answer to the question of why we need our own club will self-evident; it won't even be asked. But until that day comes, LARC will be there to provide the answer, another public service provide this time with our own in mind.

It's looks like this guy really doesn't have a clue as to what the loss
of 2 meters would do for us hams. Just about all of the emergency
comunications is on 2 meters. Does he expect the LEO people to come out
provide comuncations during times of disaster?

You *can* design and build and experiment to your heart's content!
Maybe you can get an experimental license from the FCC. If not,
find an associate who is HF-licensed. After all, if you're really
altruistic enough to devote yourself to improving technology, it
shouldn't matter that you can't be HF licensed.

Those engineers who build the space shuttle don't actually fly it;
the designers at Boeing don't fly what they create. So you'll be
in good company with some fine people if you can't legally operate
what you design.

Now, let's see how altruistic your actually are...

I'm not going to argue with you on the amount of code on 40 meters :^)
I do listen. I started learning code after Christmas and I am
practicing 5 WPM. One trend that bothers me is the lack of 5 WPM QSOs.
I'm slowly picking up bits and pieces of the slower code. Time will
change this.

I'm merely basing what I said on the number of General Class holders
according to a third party was released by the FCC. The number of
General Class holders dropped by 1841 in the last year. Advanced
holders went up by 120. This doesn't reflect all the code still in use
but could in the long run.

Thanks for wishing me luck. By the end of this summer I want my
Advanced ticket.

What *is* the average age of hams these days? Has it changed at all since 1991? For that matter, what is the average age of the holders of the Tech license? I would imagine it is younger than the average for General and above, and hence since the numbers of Techs are increasing would be driving the overall average down.

Now I'm way out of my depth when we start talking about economics, but it has seemed to me that there is more of a consolidation going on---rather like WalMart, Circuit City, Toys R Us, et al. taking over the retail market from smaller, more local businesses. Tucker's demise seemed to be HRO's gain. MFJ has an increasingly growing product line, etc. Not that consolidation is any healthier a trend, of course.

Fine. Then get on your radios and talk like everyone else. But don't try to use ham radio as a vehicle to promote your homosexuality. We don't want to hear it. You people make me sick the way you attempt to get in our faces and push your abnormal lifestyle onto us, only to whine about "homophobia" when we reject you and your perversions. If you'd keep your sexual preference to yourselves and just use the radio the way it was intended to be used, you wouldn't have a problem.

Whats the problem with that? With some computer skill 'HF CW' is a hell of a channel! I am a Tech no code but have been around code for years, and it does have a place. I have seen it work when nothing else can. You can argue that it should not be a central place, and I can agree with that. As far as a Tech+ privleges, why not use a computer to optimize CW, you have that privledge. Push it up to 160 Words per minute or more using a computer, sounds like a cool project! Send along some Hamming codes on the end of the packet, err I mean QSO.

I know its not QAM but its a tight channel

Paul,

Get thee to EEB, 323 Mill St. N.E., Vienna, VA and buy an Autocall
Magazine ($1.00)!

Inside you will find an extremely large listing of local clubs and
organizations, as well as lots of interesting reading - some on
a local scale and some on a national scale.

Here's a sample:

Arlington Amateur Radio Club
Meeting: Third Tuesday of each Month, 7:30pm, Red Cross building,
4333 Arlington Blvd. Arlington, VA.
Net: Tuesdays (non-meeting nights) 7:30pm
144.87/145.47 MHz
Info: Mike CAllaham, NW3V@WA3TAI.MD callaham@capaccess.org
(703) 241-5618

Alexandria Radio Club
Meetings: Second Friday of each month, 8pm, Alexandria Fire Department
Administrative Office, 900 Second St., Alexandria, VA
Nets: Tuesdays 8pm 147.915/147.315
Web Page: http://members.aol.com/n4cwp/w4hfh.html/
Info: Rich - KA4GFY, 703-644-3920 or Mike - N3PDK, 703-671-2627

Vienna Wireless Society
Meeting: 7:30pm second and fourth Friday's of the month at the
Vienna Community Center
Nets: Pow-Wow nightly at 9pm on 28.444 MHz. Vienna Emergency Net,
Wednesday 7:30pm 146.085/146.685
Info: Paul, AB4CY 703-560-2779

Hope this gives you a good start!

Wayne,

From the January 97 QST:

Washington, DC: MADRAS. W3USS, 0200Z JAN 17 to 2100Z JAN 20,
Presidential
Inauguration. General phone and CW: 80, 40, 20 meters.
QSL. Larry Ziecheck, N3GKZ, MADRAS, Box 2468, Wheaton, MD 20902.

What didn't appear in print but what is being requested is an SASE of business size (number 10) envelope along with your request for QSL, and a notation of the Contact Number you were given during your QSO - this is to aid in finding your QSO in the logs.

From: Steve Noonan <snoondhs@pop.k12.vt.us>
Message-ID: <32EE2662.4532@pop.k12.vt.us>
Source record: 206054

Does anyone have an old base station antenna that they wouldn't mind giving a way to me? I am 16 and I am just gettig started. Right now I have a homemade antenna that I built from stuff around the house. It works ok, but I need to get a real antenna. The problem is, I'm broke. So if any one has an old base station antenna that they don't need anymore, I would appreciate it very much if you would consider giving it to be. I live in Danville Vermont. If you live within a couple of hours from here I could come pick it up. Or if you don't live close I could pay for shipping. I would really appreciate a base station antenna, also if anyone has an old power supply that they don't need, I could use one of those to. Right now I am running off a 12 Volt adapter that is meant for a cordless phone. Makeshift, but it's working for now. Thanks in advance!

This weekend is the Ten-Ten International Winter SSB contest. If you like a challenge, this is right down your alley with 10 meters being very sporadic in the low part of the solar cycle. But you never know, the band might be wide open in your area with E-skip.

The contest is open to all radio amateurs regardless of whether you are a member of Ten-Ten or not. However, only the logs from Ten-Ten members whose membership dues are current will be accepted and scored. Stations without a Ten-Ten number count for 1 point and those with a Ten-Ten number count for 2 points. Multipliers for each different prefix that you work. Logs will be scored by VE7ACM who is good in the Callbook.

The contest will begin at 00:00 UTC Feb 1 thru 24:00 UTC Feb 2. Ten-Ten International requests that a "quiet zone" be observed between 28.490 and 28.510 from all those who participate in the contest. If you would like more information on the contest, check the Ten-Ten International Web page at http://www.lehigh.edu/lists/tenten-l/ and scroll down to the contest page link. Please note that in the URL, it is a lower case "L" on "tenten-l". If you are not a paid up member, all of the info you need is on the Web page.

It seems that our contest chairman has forgotten or neglected to use this excellent media to inform the Hams out there in Radio Land, so thought I would post this note about it if you would care to jion in. If the band seems dead from your QTH, try turning your beam due south and pulling out a weak back-scatter signal. Like it says on the logo, "You have to make contacts to get results". Hope to hear you there.

>I think the fact that it is on the air stands as a constanst reminder as to how
>sad the FCC's enforcement branch works......

You should hear 75m here in the States, Jim, especially in 4 and 5 land.
It makes the .435 machine sound tame. (Sometimes it makes CB sound tame.)
And you're right, the problem is lack of enforcement. The parties responsible
are almost all well known since they are there night after night, and many
of them have been doing it for years, but nothing is done about it.

The other bands aren't as bad. The antics on 14.313 MHz are the eptitome
of civilized behavior by comparison to some of the stuff on 75m. And
contrary to what someone claimed, most of the offenders are not slims.
In fact, most of them are long time licensees who are very well known
in the amateur community (not in a *good* way, of course).

The FCC would have to be deaf, dumb, and blind not to be aware of them.
They just don't want to make the effort to cite them and prosecute them.
It is not a priority. As long as they stay inside the band and don't
interfere with *important* radio services, the FCC seems content to just
ignore the whole matter.

Considering that Morse code testing is unjustifiable, why should it be retained? Please explain to me why many US citizens rail against government intrusion in their lives; yet, when faced with the same principles of reducing undue government regulation, all common sense disappears with the belief that Morse code testing must stay?

Scott,

If my (failing) memory serves, the questions for Extra changed sometime during the Fall/Winter last year. Possibly as early as Summer. I remember as I was helping a friend watch for the new materials to hit the street.

I'm not so sure about the Advanced Class, but believe they changed at about the same time.

Perhaps someone can substantiate what I'm telling you.

Well, people make all kinds of radio clubs. There are radio clubs
for people that work at a particular employer, radio clubs for
peace officers, radio clubs for people that live in particular
places, and so on. A person's employer has nothing to do with
my interest in radio, nor does being a cop or living in some
particular place. Clubs are social organizations, where people with
common interests can gather. There's no difference in this
respect between a radio club that invites "peace officers with
amateur licenses and their friends" and a club that invites "gay,
lesbian, transgendered individuals with amateur licenses and their
friends".

Frankly, I don't see anything "in your face" about the LARC
announcements. They're a group of radio amateurs with some
specific common interests. What is so offensive about this?
Perhaps you're not interested in joining, perhaps you find the
idea of homosexual relationships offensive, but the club is
just advertising the social interests of the group. There's
nothing wrong with that, even if the social interests are in
the minority. I suspect people that find homosexuality repulsive
would really rather know *up front* what LARC is about - rather
than going to a meeting and finding out by accident.

Get real, Hans ... you know damned well that my license (Tech+) gives me
access
ONLY to CW on 80/40/15 and SSB/digital on only a limited part of 10m ...
not at all
adequate for any sort of advanced work ...

But you know that ... you're just tossing red herrings about to try to
confuse folks
who don't know any better or don't read carefully ..

I meant what I said, though I may have stated it "incorrectly". I have nothing against anyone, due only to someone's sexual preference(s). I can not say that "some of them are my best friends", but I think "they" are human beings and deserve to be treated as such. MY PROBLEM HERE is that THIS is amateur radio; not some adult sexual retreat! I see no purpose for ANYONE identifying their sexual preference, or for that matter the same would apply to someone's religion as well. Speaking of that, would you believe someone actually placed their religion on an ARRL ballot? Never seen that before!

Maybe all of this is just a sign of the time. NOT a good sign either !

>that we have in common with other people.

EHHHHH (BUZZER) ... WRONG ANSWER! THE SURVEY SAYS .... ZERO!
DOES NOT HOLD WATER. BY YOUR LOGIC, WE SHOULD HAVE NAZI ARC, KKK ARC, GAY
BASHERS ARC, HATE MONGERS ARC, DEVIL WORSHIPERS ARC (GETTING THE POINT
YET?).... HOW ABOUT THE S&M A.R.C. (HEY, Y'ALL OUGHT TO LOVE THAT ONE, HAR
HAR). WHERE DOES YOUR RIGHT TO EXPRESS WHO YOU ARE END, AND MY RIGHT NOT
TO HAVE TO LISTEN TO IT?

IT IS GUYS LIKE YOU THAT MAKE ME WANT TO CHANGE MY MIND ABOUT TRYING TO
LIVE AND LET LIVE. ALL I ASK IS FOR YOU TO TAKE YOUR LIFESTYLE AND GET
OUT OF MY FACE. I DON'T LIKE IT, AND I CAN NOT SUPPORT IT WITHIN AMATEUR
RADIO, SINCE IT HAS NOTHING TO DO WITH FELLOWSHIP OR RADIO. WHAT IT HAS TO
DO WITH IS A LIFESTYLE THAT MOST OF US FIND ABHORANT. YOU, SIR, SEEM TO
THINK YOU CAN FLAUNT IT WITHOUT BEING REBUKED. KEEP IT UP, AND IN FOUR
MORE YEARS WHEN HE GET RID OF THE ASSHOLE CURRENTLY IN THE WHITE HOUSE,
AND WE ADD ONE MORE JUDGE TO THE SUPREME COURT, IT MAY BE A DIFFERENT
STORY. WHERE (SOMEONE LIKE ME) WOULD HAVE PREFERRED TO KEEP THE GOVERNMENT
OUT OF EVERYONE'S BEDROOM, I MIGHT BE COMPELLED TO LOOK AWAY IF THEY
DECIDE TO PASS MORE LAWS WHICH REMOVE GAYS FROM IN FRONT OF MY FACE. YOU
ARE LOSING FRIENDS, WHICH IS OKAY IF YOU HAVE ENOUGH OF THEM. WORSE YET,
YOU ARE MAKING N E W E N E M I E S , AND THEY ARE FOR LIFE!

>But more than that, LARC is needed for those hams who are gay, bi,

>thus are isolated form the sexual minority communities in the major
>cities. By joining LARC these hams can benefit from the support and
>comaraderie that comes from a close association with other gay hams.

No, what it is sir, is a self-perpetuating pool of available sex
partners. That is the only reason faggots require acceptance in
society! The process of natural selection does not apply to faggots,
so they must gather in 'groups' in order to find partners of thier
specific preference. Sex has nothing to do with ham radio except the
creation of new hams, and the traits of faggots tend not to create
much more than a mess.

>Finally, there are young gays, BIs, lesbians, and XGENs who often have a
>tough time dealing with societal homophobia and the misguided
>disapproval of their family and peers. These young people need positive
>gay role models and they need to know that they're not alone. LARC can
>help out in this as well.

There is no such thing as a 'positive' gay role model. Being gay is in
and of itself a wrong and negative choice. That's right, choice. You
are not born that way, it is a selection, a preference and or desire.
Realize this and the battle is half over. It is against nature and the
process of reproduction. Oh, and go ahead and cite bible verses, and
talk about monkeys that engage in similar activities, because I'm
going to shoot those "excuses" down. Animals react to stimuli, so do
humans with one exception. Humans have been given the ability to
rationalize and reason, animals are not afforded this "luxury". Where
and animal may do something out of instinct or reaction, a human can
weigh and measure, calculate and DECIDE what it will do. Therefore,
knowing something is wrong, and doing it anyway is not a natural act,
nor is it something society will have to accept. Besides, to equate
what faggots do, to that of an animal just about sums it up. Oh, and
the place in the Bible that talks about sodomy and homosexuality, and

the city of sin that condoned it? That place was destroied, for those reasons. You see, you have to read past a little further.

>Maybe someday the answer to the question of why we need our own club
>will self-evident; it won't even be asked. But until that day comes,
>LARC will be there to provide the answer, another public service provide
>this time with our own in mind.

No, faggots just need to have other faggots pointed out to them so they have a wider selection of partners, with the least amount of effort put forth. There is no other reason, as I have stated in this group and in others when this topic has come up, for a Gay/Lesbian club than to bring together those of thier same preference so that their selection of a partner is that much easier. That's all there is to it. A rose by any other name, smells the same.

We can only hope that the need to NOT question the existance of ridiculess groups like these never comes about. It's time to wake up people.

You can call me what ever it is you like to call people that oppose this type of activity. I'm a big boy, I can take it. When it comes to this subject, I *do* have a closed mind (and a closed behind). Some of us ARE able to tell the difference between an manhole and a sewer-pipe.

Rob Neff (N7ORY)

P.s. Hey! Maybe we could get the government in on this too! Yeah! We could have the Surgeon General tatoo warning lables on the asses of every faggot so that the risks of this type of activity will be known. You know, like on cigarrettes. Just a thought, since they don't seem to get information by any other means.

yeah...and what interests might that be, that does not reflect "normal society"? If they want a club, let them have it. I just do not want that kind of behavior out in public. By the way, homosexuality is illegal in most places. It is called "sodomy", and it is also a public health hazard. I don't think we can say the same for other clubs, which have some special interest (like police, IBM, TI, etc). Heck, let's have a "drug dealers ARC", "Convict ARC", and maybe even a "Crack Head ARC". They also have some anti-social behavior that they need to share with their fellows too...RIGHT ?

Hog wash !

2169. HAM vs. HF SSB Marine

Newsgroup: rec.radio.amateur.misc

Source record: 206121

Read in a recent issue of Ocean Navigator (I think) about a guy who had an unfortunate run-in w/Australian governmental efficiency. Seems that, while visiting the land of Oz, he had a repairman onboard to resolve some sort of radio troubs, said repairman then discovering that he "...had illegally modified his HAM radio set to transmit on the Marine SSB frequencies ...." or words to that effect.
All of his gear (including computer connected to it, probably for WX FAX or packet or whatever) was confiscated as a result, and the repairman was granted a nice little bounty for uncovering this heinous crime.
I know that (absent an actual emergency) we can't use our lowly non-type-accepted radios to transmit on the commercial bands. I know that. I know that. I KNOW that. Please, do not tell me that, even if you ALSO know that.
My question, instead, is just what the heck did that Aussie mean by " ... illegally modified to transmit on the Marine SSB bands...." in the first place? For the life of me, I can't think of any modification which would be required. I've been shopping for MM transcievers for the past several months and I can't think of any that I've seen that you couldn't use on the Marine bands without any modification at all.
Not that that would ever be done, of course.

I would not, could not tune to there.
No thinking man would ever dare!

On a related note ..... surely it can't be illegal to simply receive on those bands, can it?

It just does NOT happen that way.

>Satellites, the Internet, and more modern forms of
>communications can't withstand natural disaster.

You'd do well to look into the robust ability of modern
technologies to, in fact, repond to disastor. We've had
sufficient such incidents (flood, earthqualke, hurricanes)
to test the mettle of both commercial comms and
amateur emergency response. Both did fine without
any need for CW.

>An old set of
>non-semiconductor radios with a generator is still the most reliable
>means of communications when all else fails.

Please tell us why? Just what do you consider a non-semiconductor
radio anyway? Frankly, I'll put my faith in my Transceiver and HT
and not some crude substitute. Both are powered by 12v and
can, therefore, be powered by any many alternative power
sources that are readily available.

>Hams have to know how to
>use it and maintain it. That puts this hobby above all else.

Use what?

>over and it becomes like 2 meter is now.

There's no difference in 2m operations from HF from what I've
observed. Neither is a pristine example of operating prowness, but
both have their share of many competent operators too.

2178. ==Delaware QSO Party Feb 1-2!!==

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-28 00:00:00 UTC
From: radio@copland.udel.edu
Message-ID: <5clvob$ele@copland.udel.edu>
Source record: 206130

Finally - the Delaware QSO Party!!

Sponsored by the First State Amateur Radio Club

Who - All radio amateurs in and out of Delaware

When - First full weekend in February (1997: Feb 1 & 2)
Saturday: 1700Z (1200 EST) until 0500Z Sunday (2400 EST Sat.)
Sunday: 1300Z (0800 EST) until 0100Z (2000 EST Sun.)

Where - Suggested frequencies are:

Phone CW
1.860 1.825
3.960 3.550
7.260 7.050
14.260 14.050
21.360 21.050
28.360 28.050

Novice and Technician freqs: 25 kHz above sub-band edge

This does not imply that you may not work any bands you choose,
such as VHF/UHF/SHF. However, as there is only one entry class,
all logs will be judged equally.

How - Work stations once per band and mode.
Exchange signal report and QTH (county for Delaware stations;
state/province/DXCC country for others).

Scoring - There is ONE CLASS for all stations.
Count ONE POINT per PHONE QSO.
Count TWO POINTS per CW/RTTY/Digital QSO.
Multipliers/special event stations: NONE.

Awards - Certificates will be awarded in the following categories:
Within Delaware: first, second and third highest score.
Within each Delaware county: highest score.
Others: first, second and third highest scores.
Further prizes and certificates may be awarded, depending
upon participation and merit.
Certificates and prizes courtesy of Ham Radio Outlet, Delaware.

Submissions-
There are no requirements for dupe sheets, and no forms nor
software offered especially for this contest.

Logs must show date, time, band, mode, station worked, exchange send and received, entrant's call and QTH, and total summary of QSOs and points. You are assumed to be observing the rules of amateur radio and contesting, so that no such written statment is required.

Mail entries within 30 days to: Contest Chairman
FSARC, Inc.
P.O. Box 1050
Newark, DE 19715

Include SASE for results.

E-mail logs with adequate summaries, and any other comment or inquiry to:

radio@udel.edu

Results will be posted through 3830@contesting.com, and e-mailed to NCJ and CQ.

Thanks and LET'S GO DELAWARE!!

Message-ID: <32eda587.9063438@snews.zippo.com>
Source record: 206133

Seems to me that by now all the code and/or no-code talk would have finished. We have debated, argued and just bashed the "hobby" till any person that might have considered becomming a ham has been turn againist us due to the CB like mentality that most hams portray. Lighten Up folks!! This is a "hobby". whether ther is a code requirement or not does change that. If we say there is no more code on hf then the "hobby" will still be what it is, just a "hobby". It's like this, can any of you with the endless debates make the FCC and ITU open up the "hobby" to no-codes and give them/us access to HF? If you can will you please e-mail me, I'd like to ask where you've been during all these debates. Now can you tell me why we got in this "hobby" in the first place? For most it was to have fun and talk with and make new friends. But, all these debates are casting a shadow over what Amateur/Ham Radio truely is. In the days of old "So I've been told" ham didn't fuss and fight they all teamed together to develope new radios and modes of operation. But what do most hams do in this day and age?? Most either go out and buy a stock radio, tune in there favorite repeater and sit there and talk or they advance there license and get on HF and rag chew. Now the point I'm trying to make is this, it really doesn't seem to matter if your a coded or no-coded ham, all your really doing is setting on the air and wasting bandwidth. I bet not more that a small hand full of you out there have ever built a kit radio or designed an ant. But when it comes to debating with your fellow hams about the need to keep a code requirment you can sure waste the time and energy to type a letter. Let's just step back and take a look and what we have become and what we are turning this "hobby" into. I believe that most of will not like what we see. But as for myself I wish only the advancement of this "hobby" and if it takes dropping the code requirement then let it be. I haope each of you have a nice day! ;-)

>Thus, I am quite confident that the RF-sideband corresponding to the
>5th harmonic of the 20 WPM keying waveform are 83.33 Hz apart (and not
>166.66 Hz apart as Gary had calculated).

Unfortunately, your original reply to my note didn't make it to this site, so I'm jumping in here in your follow up to Carl with some things missed.

If I follow what you are saying, a dot is a positive half cycle of the fundamental frequency, so a full cycle is twice the dot duration. Thus the frequency is 1/(2*dot), or in this case 1/(2*0.060) or 8.33 Hz. So my error was to use Bw=2/T with dot as the value for T when I should have used 2*dot as the value of T. That yields a double sided PSD of 83.33 Hz out through the 5th harmonic. Ok, I accept that.

If I followed your argument, you were saying that halving the bandwidth of the OOK signal (by correcting my error) would recover 3 db of the 6 db improvement gained by FSK over OOK. *But I didn't factor occupied bandwidth into that 6 db*. Ouch! I should have, because it would have made the improvement 11.74 db instead of 6 db (the raised cosine occupied bandwidth is 66.66 Hz [same baud]). Lets go through the numbers again.

The FSK signal gains 3 db over the OOK signal at the transmitter because it transmits twice as much symbol energy for the same peak power output. (US amateurs are limited by how much peak power they can run, IE 1.5 kW PEP, average power isn't counted.)

The FSK detector exhibits a 3 db gain over the OOK detector because of the doubled Hamming distance in signal space, IE +1 and -1 for FSK, +1 and 0 for OOK. This is a distinct 3 db from the transmit 3 db, and exists because of the doubled Hamming distance, not because of the limit on peak transmit power. In other words, it exists because the detector has less uncertainty. The truth table for an OOK detector is

mark (+1-0=+1) -> '1'
no mark (0-0=0) -> '0' OR ERROR

The '0' value is uncertain. It could be a '0', or it could be
a '1' lost due to channel impairment. Actually, the '1' is a
bit uncertain too, it could be an interfering signal.

For the antipodal signal the truth table is

mark minus not space (+1-0=+1) -> '1'
space minus not mark (-1-0=-1) -> '0'
not mark minus not space (0-0=0) -> ERROR (faded signal case)
space minus mark (-1-(+1)=0) -> ERROR (interference case)

All states are certain. (Knowing a value is ERROR is positive knowledge,
and is particularly useful for certain forms of FEC.)

Now finally, I neglected to take into acount the gain in SNR due to
the different occupied bandwidths. If we take the revised numbers
instead of the ones I had originally, we have a factor of 1.25 greater
occupied bandwidth for the OOK signal (same baud). That's 10*log10(1.25)
or 0.98 db.

Totalling up, we have 3 db plus 3 db plus 0.98 db for a grand total
of 6.98 db poorer performance by the OOK signal.

Note I haven't touched on the issue of optimum channel filters or
done a detailed truth table for the 5 distinct Morse states (only
40% of which are transmitted). Both of those would increase the
disadvantage of OOK Morse. Nor have I touched on the issue of FEC
for the better codes. You may have commented on some of that in
your reply which didn't arrive here.

2185. FT-50R Transmit Abnormality?

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-28 00:00:00 UTC
From: Jim Kauppila <jimae4hl@internetmci.com>
Message-ID: <32EEEDF5.2F96@internetmci.com>
Source record: 206137

I have noticed that if my FT-50R is keyed with a strong signal being received on the S-Meter at the same time that the transmit power bars and transmit power is drastically reduced. After switching to another frequency or the frequency clearing and waiting about 4 seconds the transmit LCD bars and power is back to normal. Is this a standard feature to prevent interfering with another signal or a glitch in my radio?

Thanks,

Jim AE4HL

Cross-posted to: rec.radio.scanner,rec.ham-radio,rec.radio.amateur,rec.radio.amateur.misc,alt.radio.scanner

Now available! Take a look!

WinTone32 v1.5 - Real Time DTMF Decoder/Scanner Monitor for Windows 95/NT

Works with your windows sound card to detect DTMF tones, no other hardware
required! Here is a list of the (new) options:

* Tunable Detection Options - Everything from changing sensitivity to logging
tones to file - You control it all.

* Log tones to a file for later study.

* Decodes DTMF tones in real time by using your Windows compatible sound card and any audio source hooked up to the Microphone jack.

* Decodes DTMF tones from windows WAV files

* Optionally saves audio into a WAV file

* Scanner Monitoring - Allows you to record audio to a WAV file, but only
when the audio breaks the software "Squelch Point".

* DTMF Triggers - Assign events to certian DTMF tones, and when these tones
are detected, the events cause pre-defined actions (Launch an EXE, Start
recording to a WAV file, Etc)

* Tested out on fast 486 machines, but the faster the better!

Come try the latest version!

Steve Makrecky wrote:
>
> Where on the web can i get a copy of the CI-V coded?

I have written plenty of CI-V code for the ICOM R-7000 for the purpose of Military and 800 Mhz monitoring. I use an intelligent scannng method that prioritizes scanning based on recent 'hits'.This method allows the basic (dumb scanner) method to be turbocharged and an additional gain is achieved by increasing the basic scanning rate via the serial port at 9600 Baud. The radio runs faster serially anyway.

This scanning mode includes the ability to send Freq Activity Reports to my e-mail site at work. Am working on audio link and remote control. (Like the DEA and Uncle Sam's other friends use.)

I have a STRIP CHART mode which runs 24 Hours before overwriting itself (all 99 Channels) An 800 Mhz "Investigator" I use an interface that is easy to build and allows for squelch break detection via the RS-232 BELL line. The Investigator is fun to use travelling mobile with a laptop!

The CI-V Protocol is available from ICOM. Just ask for the paperwork that
comes with their interface. It was FREE when I got it.

Why pay for software when you can write something that fits YOUR needs?

Steve Kramer

I agree, except for the weak signal portion. Let's
keep 144-146 and give the rest away. And concerning 2m
repeaters, they're the watering holes for the weak-minded
and a total embarrassment to the hobby. It embarrasses me to
admit this, but I owned a 2m radio for about 2 weeks when
I was first licensed. There, now that's off my chest.

We are pleased to announce that our new application note,
'Device Control via the PC' is finally available.

This application note covers such topics as PC control of lamps and motors
using solid state and mechanical relays, device control using both
BJT and power MOSFET transistors, stepper motor control using a transistor
array IC, as well as PWM motor control using the L293 H-Bridge. Connection
to the PC is made via our inexpensive EDE300 PC Interface IC. Code examples
are also provided.

Feel free to download a copy today; it is available at
http://www.netins.net/showcase/elab in the 'Integrated Circuits' section
under 'EDE300'.

>persons, women, people of color, etc.

They do, eh? Funny, most clubs that I see in amateur radio have to
do with >amateur radio< first. They are DX clubs, packet club,
general clubs, and so on.

I >don't< see many "Cigar Afficinaos DX Society" or "Horseback-rider's
Packet-Radio Fraternity" organizations.

In other words, other clubs in amateur radio define themselves in
amateur radio terms. Lamda, however, seems to be the only amateur
radio club that seems to have to define itself in non-amateur terms.
Now, why exactly is that? I happen to think it is because Lambda is
more interested in promoting a gay agenda than it is an amateur-radio
agenda.

>But more than that, LARC is needed for those hams who are gay, bi,
>lesbian or transgendered who live in rural or out of the way places and
>thus are isolated form the sexual minority communities in the major
>cities.

Why? Since when is amateur radio supposed to be a support group for
>any< population segment?

>By joining LARC these hams can benefit from the support and
>comaraderie that comes from a close association with other gay hams.

I would think they would be more interested in talking to other gay
community members rather than another gay ham 3,000 miles away.

>Finally, there are young gays, BIs, lesbians, and XGENs who often have a
>tough time dealing with societal homophobia

"societal homophobia"? Translation: anyone who disagrees with our
lifestyle choice, and is openly vocal about their disapproval.

>These young people need positive
>gay role models and they need to know that they're not alone. LARC can
>help out in this as well.

Why?

It sounds like LARC wants to be a gay support group, not an amateur radio club. If you want to be a gay support group, go do that. When you want to play radio, do so without the gay support agenda.

>my interest in radio,.....

Homosexuality and its place in a straight society is still a controversial
and volatile issue:

In my opinion LARC is flaunting the homosexual lifestyle in the faces of
many people who find it offensive. I don't care what these people do in the
privacy of their own bedrooms - it is of no interest to me. But to bring
the subject into the public arena where it is unwelcome is flaunting or,
as some would put it, "in your face". Sure, companies have amateur radio
clubs as recreational facilities for the employees but if that club station
is used to promote that company's business goals it is patently illegal
as amateur radio is supposed to be non-commercial. There are local radio
clubs all over the place - I am a member of a great club in Massachusetts
called the Billerica Amateur Radio Society. Some of us get together every
once in a while and socialize, hang out and have a good time. There very
well may be members who are homos, lesbians, who knows what but it doesn't
matter because it is not the raison d'etre for the club's existance.

Now, let's take this example one step further.....

You have probably heard about the controversy surrounding the St Patrick's
Day parade in South Boston. The homos/lesbians/twists sued because the
parade's organizing committee refused to let them march in the parade.
The 'gays' lost their suit because the parade is privately organized.
To listen to them piss and moan you'd think that there was a great injustice
done to them. Well, here's what they don't tell you - they wanted to march
as a group of homosexual Irish-Americans, "gay-licks" if you will, along
Broadway in the middle of working-class, Catholic South Boston. The parade
is a family occasion in "Southie". People do not want their children exposed
to homosexuality - the Catholic Church teaches them that homosexuality

is a mortal sin and consequently such a display would be offensive and unacceptable to the community. I you are not familiar with South Boston - its the kind of place if you're looking for trouble you're going to find it there, no question. It would assuredly be more than you could handle. Don't get me wrong - I do not condone all that has happened in South Boston over the years, but it is their home and community. Now, if these people wanted to participate and march with any of the other groups not proclaiming something offensive to the community no one'd care a hoot.

I do not condone "gay bashing" or any other kind of mistreatment of these people. They are human beings and are the same as the rest of us except in my opinion, there is something very important missing - something very basic! They obviously need each other's support to accept and come to terms with their homosexuality. I have a couple of friends who are "that way" and it doesn't bother me because it is not the basis of our relationship. They do not flaunt it at me and I don't try to change them. We each know better.

I do not believe for one minute that they are that way by choice or desire. I feel sorry for them missing out on children and family. However this does not justify them flaunting their unnatural behaviour at the rest of the "community" and amateur radio is just that - a community. There are supposed to be taboo subjects such as religion and politics, remember? Maybe we should add sexuality to the list. It only causes for argument and ill-will when amateur radio is thought of as a fraternity - witness what we have seen happening here! We should try to live by the fraternal code and help advance each other's understanding and enjoyment of the radio art and not worry about the details.

Anyways, that's how I feel about it!

Who give a damn about what the loss of two meters would do FOR hams.
You have a license to SERVE the public, NOT YOURSELF.
Ham radio is a disaster. Cell phones are FAR more reliable.

You should have seen Len at the ARRL Southwestern Division Convention.
During a Town Hall Meeting, Winkler tore into Lou McCoy like he was Morton
Downey, Jr. It was a pathetic display of anti-code rhetoric.

Now, if Len could copy 20 wpm, his no code stand would have some little
creedence. Instead, it's the sad cries of someone who can't copy the code
at all.

2198. Fox Hunter patch available

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-28 00:00:00 UTC
From: Steve <ssable@tdi.net>
Message-ID: <01bc0d5f$05d48800$5aad3ece@dialup.tdi.net>
Source record: 206150

I have looked for along time for a jacket patch about Fox Hunting
and found nothing, so I had one made up.
My patch has a dark blue background with gold around the outter
rim, and gold lettering with the word AMATEUR RADIO on top and FOX
HUNTER on the bottom.
In the center of the patch is a silver fox head with a radiating
antenna just behind the fox head.
I am not in the business of making these patch's but am will to
have them made up for those who would like a patch for their jacket
showing participation in Amateur Radio fox hunting.
Right now it cost's me about $9.50 to have one made. I am looking
to see if more are ordered would the cost be less. Right now I can
say that I would ship one for $10. The extra .50 to cover postage.
The patch can be viewed on my web page, the address is listed
below. Go to the fox hunt link page and you will see it there. If
you need any more info Email me direct rather then posting a reply
to the this USNET group. 73 de Steve N8NYU

Joseph Mack mack@xray.duke.edu, (919)-613-8890, FAX-(919)-684-8885
SysAdmin Xray Lab
MacroMolecular Structure Group, Duke University, Durham NC, 27710

Announcement: AZ_PROJ v1.04 Azimuthal Equidistant Postscript Mapping package
available from the AZ_PROJ Map Server Website at

http://www.xray.duke.edu:1080/

or by ftp

ftp://ftp.xray.duke.edu/pub/az_proj

The file is azprj104.zip (approx 1.2M).

The new features are

1. Orthographic orientation option
(The Orthographic projection puts South at the top of the
page). Needed for people in the Southern Hemisphere (-:

2. ARRL grid square labelling style added. The ARRL
style has much smaller labels for the grid squares and puts
the letter square labels in the bottom left of the square.
The grid square labelling style used in v1.00-v1.03 is
now called az_proj style.

3. Several different options added for shading
worked grid squares (different colors, different cross
hatching methods) so that it's possible to mark grid
squares worked by two (or more) different people. See
the sample grid.dat file for more info. You can also use
the same options for marking the grids at the ends of a
qso (see qso.dat for examples).

4. Plotting TV stations for North America (NA)
and Europe. A full list of NA stations broadcast
stations (MW, FM, TV) in machine readable format has been
produced by Colin K4SSO. A separate file consisting of
only the NA Channel 2 stations (55.25MHz useful as 6m
propagation markers) has been added. A list of European
TV stations (from Geoff Brown and Emil W3EP) has been
converted to machine readable format, for 6m propagation

markers.

5. DAT file formats are still changing (sorry).
Anything which is a transmitter (TV station, rover, beacon,
repeater) all have the same format. The only thing which
changes is the symbol displayed. Please note the changes
detailed in each .DAT file (at most you will have to add
an extra colon or two to your old files if you want to update
them).

6. GRID2.DAT file format of v1.03 is now standard
(and called the GRID format, with no 2). The old format from
v1.00 which had been used in parallel, has been
dropped.

7. An install.bat file has been added to install
AZ_PROJ and Ghoscript onto a DOS machine with a VGA or
SVGA monitor. Sample batch files for testing both Ghostscript
and AZ_PROJ are included.

8. Easier method for choosing when to draw grid square
borders and compass (in az_ini.ps). (Also clearer explanation
of what's happening, I hope).

9. Display of USA by call areas (0..9) rather than
(or as well as) by states.

10. Labelling feature. The center of the line on which
the label sits, is at the lat/lon (cf annotations where a blob
is at the lat/lon). This feature can be used for labelling
continents, countries... The size of the characters can be
chosen differently for each entry, and the size chosen scales
with the map scale. You can try this feature out, by labelling
the US call areas with the file us_call.dat when the numbers
0..9 will be drawn in each call area. The borders of the call
areas can be drawn by turning on /draw_USA_call_areas in
az_ini.ps.

General blurb about AZ_PROJ

AZ_PROJ is a collection of postscript files and data
files for generating azimuthal equidistance projections of the earth
from (almost) any point on earth. It can plot color maps of the
surface of the earth on any scale, draw and/or label grid squares,

show worked grid squares on a band(s) of your choice, dxcc
countries (and countries worked an a particular mode, eg CW/SSB),
mountain tops, rovers, repeaters, beacons and can use NMEA input
from a GPS receiver to center the map.

AZ_PROJ can be run on ANY computer (Mac, PC/DOS/Win/DVX, Unix)
and output to a postscript device (printer, ghostscript runing on a
unix or DOS machine with a ghostscript compatible printer, eg
HPcolor inkjets). Ghostscript will also allow display of the maps
on screens.

Although a rudimentary understanding of postscript will
help in running AZ_PROJ, sample .bat files are supplied to make
initial maps and it should be possible to make simple changes to
the az_ini.ps and *.bat files to get the maps you want.

To display the maps on a screen or to use a
non-postscript printer, you should first obtain ghostscript
(available for PC (DOS, Win, DesqViewX) or Unix) from your
favorite ftp site (try ftp.cs.wisc.edu/pub/ghost)

The AZ_PROJ files are GNU copylefted.

Who is this guy? And apologize for what?

I am a professional communications consultant.
So what?

Normally, it would
> be "no big deal" to have folks talking out of school about things which are
> (1) of no concern to them, and (2) which are untrue and libelous. Since these
> fabrications and accusations have been published in a public domain, and
> further since they have been seen by people who influence my business, I have
> asked that my attorney investigate the situation and advise me if he believes
> that we should litigate.
>
Litigate what? My post follows your threats. I can hardly see anything
in my statements that reference you. The only thing I state is my
aquaintance with WD8LDY and my personal opinion that he would make an
excellent choice.

> I notice that you took a message, and "passed it on". This, sir, puts both
> you and I in a tough situation. I don't even know you!
And I don't know you either. Why would I spread lies about you?

I have no problem with
> Mr Allen (or anyone else) seeking office (as I once did), but there is a
> standard of truth, as well as one of proper decorum. I have no idea why you
> would participate in this kind of insulting behavior, but I suppose Dave must
> be an old pal and you perhaps did not bother to check that what he was saying
> has real documentation.
Again Mr. Adler, read my post below. You and Dave are running for the
office, not I. I could care less if you have done a good job or not. If

Dave has made some statements that you don't agree with then you should
take it up with him. You will find no statement made by me referencing
you at all. I (at the time) didn't even know who he was running against
and really could care less.

On the other hand, I have all I need. I, sir, count
> no less than 11 verifiable lies in his statements about me.
Take it up with him then.

What he says on
> his own behalf, I have no problem with. I also see that other than some vague
> statements, finger pointing, and a lot of gibberish, Dave offers no plan to
> accomplish his lofty goals.
Dave apparently feels differently on this or he wouldn't be trying to
take your job now would he?

This, however, is really not the point - so let
> me get to it, and be done with it.
Please?

>
> You have one opportunity to apologize to me and to the members of the ARRL.
Again, For what?

> If not, I will be forced to take a copy of your internet posting and turn it
> over to my attorneys for their review.
They will probably laugh at you Mr. Adler. Be sure to show them my post
below!

I can assure you that I have the
> resources to follow through on this, but if you're the type that needs to be
> "shown", so be it.
(must have woke up on wrong side of bed this morn) right Bob?

I am not interested in debating or discussing this.

This is apparent Since you would not return my telephone call that I
made to you on Jan. 21, 1997. Did your wife tell you?

You
> have just two options, and that is to do nothing or to accept the fact that
> you acted like a jerk, and apologize for what you did. If you apologize,
> there will be no further action on my part in this matter, either now or in
> the future.
>
Gee! Thanks for all of the options Mr. Adler. Doesn't leave me much
choice.

> I also see you may work for IBM? Interesting. I know a lot of people in high
> places there, one of whom is a good friend who is currently in Boulder.
Sounds like you are threatening my welfare Mr. Adler.

If I
> were you, I would take this opportunity, while it is being offered. I may do
> nothing, after all. On the other hand, maybe not. If you guys think you can
> just belittle someone without cause or documentation, y'all need to be taken
> to school. I look forward to being the "teacher".
>
Mr. Adler, tell me , are you bluffing or not? And as far as school is
concerned, I have all the education I need. Thanks just the same though.

> Your "apology" will consist of a statement, which will be placed on ALL of
> the newsgroups where WD8LDY's statement was published. You will recant what
> was stated, and apologize for participating in a scheme that was designed to
> deceive the membership of this Section.
(now he is going to even write the apology for me, how sweet!)
I can only recant statements made by me and I stand by every statement I
made in my post (see below). Scheme! What scheme?

I also want you to know that I have
> waited until this time to act on Dave's nonsense, because I do not view his
> candidacy as something we need to take seriously.
I guess the voters will decide this right?

The issue here is not the
> election. It is my reputation, which has been falsely tainted, and it is also
> the prestige and credibility of the office I hold as well.
I think you are taking WD8LDY's criticisims way too seriously Mr. Adler.
If you have done a good job it will pay off for you in the end.

Ultimately, Mr
> Allen's actions will probably only hurt him, but you sir owe me an apology,
> and you have exactly five (5) days hence to comply with this request. After
> that, I suppose I'll just have to show you that I am not playing.
>
> Very truly,
>
> Robert D Adler NZ2T

Well Mr. Adler, my 5 days are up if I'm counting properly. I guess you
have been watching over the newsgroups for your apology. Let me save you
some time. You will not find it. If I had done anything or said anything
that would require an apology, I am man enough to give an apology. But
in this instance I have nothing to apologize for. Your threats of
litigation seem to be directed to the wrong person. Think about it for a
moment. Read my post below. Did I say anything that referenced you in
any way? Did I state that I agree entirely with the statements that were
made by WD8LDY? How could I when I don't even know you right? The
statements by me are self-explanatory. I have know Dave since he was 12
or 13 years old. I havn't had any contact with him for probably 15
years. I saw his callsign in the header of a newsgroup and simply
replied to it stating that in my opinion he would make a good man for
the job based on my past experience. I used to be very active as a ham
up in WV (cw net manager) traffic handling etc. Dave was very active
then and was always spreading the word about ham radio to everyone that

would listen. I don't think he would ever do anything to harm amateur radio. However, he is entitled to his opinions and the 1st. admendment guarantees his right to voice them.

I understand the politics of the situation. You are running for office. Dave is running for the office. Mr. Adler, with all due respect, you need to take up your differences with the one which you disagree with. Here is exactly what I said in my post.

> I'm glad to know he is still active in ham radio. >>>

Now, what is wrong with anything in the 3 simple sentences above?

I have come to the conclusion that you are taking this election and amateur radio and the internet way too seriously and you might ought to lighten up and enjoy life a little more. If anyone owes an apology, it is you that owe me an apology. I do not take kindly sir, anyone that makes false charges or threats to me when I am not at fault. Now if you would like to persue this matter further, that is your decision and I can assure you am I armed with all copies of everything I need to defend my innocence. I have the time and I have the money. I also have the intelligence. I also have an attourney in Dallas, TX with all hard copies of the above situation, including all e-mails which were exchanged by various parties to support my case. Now, I ask you Mr. Adler, would you like to take this a step farther? The decision is yours. I've been watching some of your posts on the internet lately Mr. Adler. You are very active and not afraid to voice your opinion on a whole bunch of topics that have been posted by many amateur operators. I agree with you on some topics and disagree with you on others. But in watching this activity, I have an idea of what type of fellow 'Ham' you are. Does the phrase "whiner" mean anything to you?

Sincerely,
Dennis Jennings

It is more than a consolidation. According to annual reports gathered
on the major Japanese radio manufacturers, gross revenues from North
American operations are down an industry average of 20%, and profit
margins are down even more (for some of the companies, profit has turned
to loss for the first time). North American gross revenues two years
ago were $470 million, so a 20% reduction is no small change.

The equipment with the largest margin, IE profit potential, is, and has
been, desktop HF equipment. Sales of HF equipment are down much more than
the average for all sales (a notable exception is the IC-706, which I
suspect is being bought by large numbers of Techs to get a 6m and 2m
all mode capability, and by others because it is so darn cute). Sales
of VHF equipment, especially HTs, are up on average, but margins are
down, IE pricing is cutthroat. That means there's little money being
made on those sales. Some of the weaker companies may back out of the
North American market if this doesn't change.

While some Japanese companies may pull back from North America, they
will survive overall because of their huge domestic market (the Japanese
home market has almost 5 times as many amateurs as the US market), because

of their large worldwide (outside of North America) market, and because of their sales of commercial two way equipment. That latter market has remained strong, and margins are generally high.

Of course all this agrees with recent reports of reduced upgrade activity and a general decline in new license applications here in North America. With fewer people looking to equip a new station, especially a HF station, of course the manufacturers are taking it on the chin. That has a trickle down effect to dealers, because they're seeing their share of the margin reduced as well, and it impacts the magazine publishers too because of reduced ad revenue. The ARRL projected a half million shortfall, the Digital Journal went belly up, etc.

MFJ is the master of working on thin margins. They have been able to prosper on the adversity of the other companies. But their product line, while broad, is also shallow. I suspect that they are playing close to the edge in financing their expansions. If the downturn continues, their house of cards may suddenly collapse.

We saw this during the conglomerate craze of the 70s with vigorous and highly visible companies gobbling up other companies until they ran out their line of capital and couldn't finance further growth. At that point, the general weakness of the market caught up with them and several fell apart suddenly.

In other words, they were using the asset value of the companies they bought to finance further acquisitions. The result was a combined company so laden with debt that when they could no longer continue to expand their asset base by acquisitions, they found that they couldn't service debt via operations revenues, IE they faced bankruptcy.

Those who could pull it off started madly spinning off companies and downsizing to "concentrate on their core business" throughout the 80s. Those who couldn't, disappeared into bankruptcy court, often never to be seen again. That could easily become the fate of MFJ. And MFJ is the largest advertiser in QST, imagine how large a dues increase will be needed to make up that shortfall.

For most of the 90s, we have been blessed with a broad array of amateur products built by an increasing number of companies and sold at attractive prices. That has been fueled mainly by a growing amateur market. But if the amateur market is turning stagnant again, as it did post-68 (IE post Incentive Licensing), I expect to see the variety of equipment available to sharply decline, dealer networks to collapse, and prices on what is left start to rise.

Gary

>radio club that seems to have to define itself in non-amateur terms.

You obviously don't get out much. I've seen a number of employee
clubs, where the *FIRST* requirement for membership is working at a
particular company or even a particular facility of one company.

I've seen YL clubs - where the *FIRST* requirement is being
female.

I've even heard of a club in Rhode Island, where membership
requires being friends with a particular individual.

So, there are plenty of clubs that define themselves in non-amateur
terms. I don't have a problem with this - it just lets people
know which clubs may interest them and which ones won't.

Some folks just can't cope with the idea there is a club for
gay hams. Deal with it. If you don't approve of homosexuality,
don't join the club.

If LARC was advertising for sex partners or putting graphic descriptions
of sexual acts on the net, that would be a problem, the same as if any
other ARC (including het clubs) did so. The people talking about
sexual activity on the net are the critics of LARC - the LARC releases

look like just about any other club release.

I've never been to a LARC meeting and have no idea what goes on at one, and, as far as I can tell, none of the LARC critics have ever been to a LARC meeting either. Hams are all just too quick to condemn and preach without actually knowing the facts - I suggest that the LARC critics attend a few meetings, and report back on what they find. It would be amusing, after all the vitriol and such, to find out LARC meetings aren't really different than any other ARC meeting...

Alas, OVH meets on the W or NW side of Manassas; a bit of a drive
from Burke, Springfield, or Arlington. Still, a good club to
belong to... Great hamfest in June, too!

> The NVFMA was a good repeate group. Their main repeater was the
> 146.79 machine. Try and find KC4OGC or WA4OGH, they can tell you
> about the group.

Uh, that would be KC4OCG, Dan Gropper. Alas, while I liked the NVFMA
they weren't, what I'd call, "active as a club" in anything other than
keeping maintaining the boat-load of repeaters they have. (6m up to
1-Gig, less 900-MHz, as best I remember)

Possible clubs to check out, in the area that Paul was talking about,
would be either the Mount Vernon club or the Woodbridge club. Wood-
bridge is VERY active, especially on Field Day with a big OP.

Oh, there's AMRAD that meets up in McLean if you want a VERY technical
ARC.

Alternatively, there is/was a newsprint "magazine" call AUTOCALL,
if it's still around, that can be usually had at the area ham stores
(EEB, HRO, and MRC). This was (is?) a good "what's new/happening"
publication for MANY of the DC metro area's ARC's. I'm sure that
Paul, if he could find an issue, even an old one, would be able to
find a club in his choice of location. Many of the club reports in
AUTOCALL supply contacts, phone numbers, repeater freqs, and/or
meeting dates.

Good luck!

I've seen a lot of scanners having also a "wide FM" mode,
intended to receive the broadcasts on 88-108 MHz band.
Did someone try using this mode for weather sats ?
Wide FM should give you a 75 kHz bandwith, more than enough
for a good reception.
Also, why not modify a cheap PLL 88-108 MHz receiver, shifting up
the frequency by 40 MHz ?
If someone succeeds, please let me know...

Hmmm.... well, I do understand your point, but it is really throwing the baby out with the bathwater. Aside from that, no one is going to change policy that way; take my word for it. I know what I am talking about.

It is better to stay on the inside, or even run against an incumbant whose philosophy is contrary to yours. The ARRL is run by an ELECTED Board of Directors, so all we have to do is change the board to be more conservate in their views on issues such as this one.

This kind of immoral abhoration is not something that happened overnight. There is the same lax program within the field organization, and other areas of ARRL activity. The standards of truth don't seem to apply, and folks are free to act like jerks, so long as they don't violate some bylaws that don't seem to want to take character and proper decorum into consideration. So, I for one, was not surprised when the ARRL did not "go the distance" on the LAMBDA issue.

It is okay to lie and deceive, and to violate a code of decency and brotherhood. I see no surprises here, and find it likely that the ONLY way to remedy it may be to pool the Board and find out which directors support LAMBDA's position, without fighting it in open court. On the other hand, it may well be the attorneys have STRONGLY advised The League not to persue the matter. If that is the case, then what we need are laws which would make our position workable in the courts.

That's my thoughts on all of this, but I really do not see the point in taking this discussion much further. I think we all know how the majority feels about this issue, but I do not see the advantage in punishing an entire organization like the ARRL, for one action they felt compelled to take. We, the members, are the ones who need to get things changed, so that groups like LAMBDA don't have that legal leg to stand on. Unfortunately, when that happens (and it will), there will be other groups who may really need legal protection, and they will lose it because of the frivolous message that LAMBDA has tried to promote on amateur radio.

>radio club that seems to have to define itself in non-amateur terms.
>Now, why exactly is that? I happen to think it is because Lambda is
>more interested in promoting a gay agenda than it is an amateur-radio
>agenda.

Yet, this is a free society, as long as any group of people wish
to form an organization that is legal, they can do that and, indeed,
they should be free to do so. If a group of hams wanted
to form the Corvette Owners (or any other non ham related distinction
such as: German, French, Christian, Jewish, Muslum, Woman,
Black, White, or whatever) Amateur Radio club, would you
oppose their right to do so. If they advertsied in QST, would you
speak against their paying for ad space?

>>But more than that, LARC is needed for those hams who are gay, bi,
>>lesbian or transgendered who live in rural or out of the way places and
>>thus are isolated form the sexual minority communities in the major
>>cities.

Why not? What legal reason should stop them?

>>By joining LARC these hams can benefit from the support and
>>comaraderie that comes from a close association with other gay hams.

>I would think they would be more interested in talking to other gay
>community members rather than another gay ham 3,000 miles away.

That's your opinion. They are free to legally do as the please.

>>Finally, there are young gays, BIs, lesbians, and XGENs who often have a
>>tough time dealing with societal homophobia

>"societal homophobia"? Translation: anyone who disagrees with our
>lifestyle choice, and is openly vocal about their disapproval.

Dealing with disapproval takes on many aspects. I don't
see your conclusion following from what was
originally posted. Indeed, any group had better
accept the fact that they will encounter disapproval
and they will need to accept the disapproval and
deal with it. The right to disapprove is just
as equal as the right to espouse one's beliefs.

>>These young people need positive
>>gay role models and they need to know that they're not alone. LARC can
>>help out in this as well.

>Why?

Because there's no legal reason why they shouldn't.

>It sounds like LARC wants to be a gay support group, not an amateur
>radio club. If you want to be a gay support group, go do that. When
>you want to play radio, do so without the gay support agenda.

LARC is free to do their suport in any LEGAL way they want.
I have distinct disagreements with several aspects of the
homosexual agenda (as I understand that agaenda) but
I'll defend their right to voice their opinions and to use
whatever legal means are available to them.

I'm also into classic/antique cars. Did you know there
is also a Lambda Car Club for gays? I could care
less and they are free to associate under whatever
interest areas they choose. You are free
to disagree, but there's no legal reason that LARC
shouldn't exist or that otherwise limits LARCS
behavior or participation in aspects of amateur
activity.

Now back to our regularly debated Ham issues.

> their technical lessers.
>

If I interpret correctly what you wrote as a followup to my comment, you are claiming the following:

- many existing no-code techs are professionals who would be designing and building superior equipment for operation at 6M and up, were it not for their resentment/dislike for the technically inferior 'beepers' below 6M.

If you mean this (and I cannot see any other clear meaning in your response), then I claim, once again, that you are not interested in the facts, but merely in winning the argument. You do your cause no service with such a response.

I mean no disprespect to no-code techs (we were all no-anything at one time!). However, I do get steamed when someone claims they are all unable to do any designing and building on 6M and up because they cannot get on the HF bands and/or because of their dislike for CW operators. That is such a non-sequitur.

While I disagree with, eg, Gary Coffman on his stance, at least his arguments are more reasonable.

In my last job I use to design pin diode switches manly for military microwave applications upto 18GHz. If you send a bit more info such as frequency band, impedance, insertion loss, isolation and return loss requirements. I will see what if I can help. I would also suggest looking at GaAs switches which companies such as M/A-COM (part of the Amp group) have a fairly large range, you may find they have just what you want in a single SMT package at a very reasonable price. These are all designed for 50 ohm applications.

: How often are the FCC amateur exam question pools updated?

: When are the question pools for the various license classes due to be updated?

Hi, Gary. The pools are updated every four years, on a rotating basis, by
class.

The Advanced question pool was last updated on July 1, 1995.
The most recent update was the Extra question pool, July 1, 1996.
The next update will be the Novice/Tech question pool on July 1, 1997,
followed by the General class question pool on July 1, 1998,
then back to the Advanced on July 1, 1999...you get the idea.

To which I reply:

Jim,

It sounds like you have the transmit battery saver on (TSAV-15- on the
menu). If the radio receives a full scale signal, it reduces the
transmit power to save battery drain (and comply with the "lowest
power to maintain communication rule). You should se the SAVE
indicator on DURING transmit if TSAV is on. See the manual page 50
for details.

Source record: 205952

Hi !

The 'Transmit Battery Saver' is described on page 50 in the 50R manual.

It 'jumps' in if strong signals are received to save battery power when answering to those 'strong' stations trying to use Low Tx power only. The function is indicated by displaying the 'Save' indicator while transmitting.

You can disable it by holding the 'knob' down for 1/2 second until one of the configurable options appears, i.e. 'Squelch'. Release the 'knob' and turn it to display 'TXSAV -15-'. Press the 'knob' momentarily, then turn it to select 'off, after this press PTT to exit and save the setting.

A shortcut to set the 'TXSAV' feature is to press the 'F W' key and '8 TX Save' key (one after the other), then press PTT to save and exit.

73, de Thomas [DF1HX]

I live in the UK but occasionally read the US radio groups for interest.

It seems to be really common in the US for people to abbreviate megahertz
as 'mhz' or 'mHz'. In Europe 'mHz' is the abbreviation for millihertz,
with MHz for megahertz.

Is it different in the USA?

End Antenna Restrictions Now, Hurry!!!!!

Gaithersburg , Maryland

FCC PUBLIC NOTICE DA 97-118 ACT NOW!!!

YOUR BEST CHANCE TO END ANTENNA RESTRICTIONS AND
COVENANTS.

January 16, 1997: Petition Filed Seeking Declaratory Ruling That Certain Provisions of a Homeowners Association Covenant are Preempted by the Commission's Over-the-Air Reception Devices Rule.

The Commission has received a Petition for Declaratory Ruling from Jay Lubliner and Deborah Galvin asking the Commission to determine whether Potomac Ridge Homeowners Association's (PRHOA) prohibition of outdoor antenna installations is preempted by Section 1.4000 of the Commission's rules. The Petition alleges that the PRHOA restriction violates the Commission's rule prohibiting restrictions that impair installation, maintenance or use of over-the-air reception devices (satellite dishes and antennas).

The Petition is available for public inspection in the Cable Public Reference Room, 2033 M Street, N.W., Room 333, Washington, D.C. 20554, 202-418-7092. Copies are available for purchase from ITS, Inc., 2100 M. Street, N.W., Suite 140, Washington, D.C. 20037, 202-857-3800.

The Telecommunications Act of 1996 allows those who cannot otherwise receive over the air television reception to have a TV antenna 12 feet in height or less regardless of any homeowner's deed restrictions and covenants. As we were unable to see our television without interference, we were in need of a TV antenna, under this new law,

to adequately view television. Thus.... the petition to the FCC.

At the same time, you may be interested to note that this Telecommunication Act of 1996 has language that will affect cellular, paging, commercial and amateur antenna restrictions! Two prior notices of rule making are on the books this year which sets precedence which may support the end of antenna restrictions if the FCC holds up this TV antenna ruling next month favorably, by allowing the TV antenna to remain on its rooftop location so that we can at last see television in our home.

For those of you who are as concerned as we are, we urge you to please write a note or letter to the Office of the Secretary, Federal Communications Commission, 1919 M Street, N.W., Washington, D.C. 20554 referring to the case identifier, CSR-4915-0, on all of your letters, voicing your support for us being able to have a TV antenna on our roof. The Commission asks that you should file an original and two copies of your letter or note.

For more information on this act you can talk to the Cable Services Bureau Contact: Eloise Gore at 202-418-1059. Internet: http://www.fcc.gov.

It's ridiculous that we even have to debate this in a so-called "free country." I will never own property with any type of "homeowner's restrictions" attatched to the deed. What I choose to put on MY roof, MY house, MY private property, is nobody else's business!

It's gotten so bad here in Florida that many subdivisions now prohibit parking YOUR CAR in your own driveway and dictate what color you may paint your house. Sheesh!

Obesity used to be a sign of wealth. Also, most hams used to be
wealthy. You have a point.
Maybe we should get the FCC to enter our weight onto its database
like other Federal public records such as Pilot Licenses.
Then we could get on the Web and see how big the other fella is.
About all you get now is the fossil factor.

Are you trying to tell me that all hams are porkers?

Hi,

in numerous publications in the ham literature on shortwave
propagation one can read that magnetic or ionospheric storms
are accompanied by depleted F2 ionization, and therefore
lower f0F2 and MUF over mid latitudes. But I have never
seen a theoretical explanation of this effect and would
like to know what is known about it.

Can anybody explain why low energy charged particles emitted
by the sun finally lead to a decrease of F2 ionization?

I read you both quickly and thought you had, Gary ... I also interpreted
Paul's
words as meaing that he was erroneously halving the bandwidth from your
assumptions and thus achieving a 3 dB improvement ... next time, I'll read
you both more carefully, even if the XYL *is* insisting that dinner is on
the
table <grin>.

> The FSK signal gains 3 db over the OOK signal at the transmitter
> because it transmits twice as much symbol energy for the same
> peak power output. (US amateurs are limited by how much peak power
> they can run, IE 1.5 kW PEP, average power isn't counted.)

I'll buy this ...

> The FSK detector exhibits a 3 db gain over the OOK detector because of
> the doubled Hamming distance in signal space, IE +1 and -1 for FSK, +1
> and 0 for OOK. This is a distinct 3 db from the transmit 3 db, and exists

> because of the doubled Hamming distance, not because of the limit on peak

> transmit power. In other words, it exists because the detector has less
> uncertainty.

And this ...

(snip)

> Now finally, I neglected to take into acount the gain in SNR due to
> the different occupied bandwidths. If we take the revised numbers
> instead of the ones I had originally, we have a factor of 1.25 greater

Many (like folks I've worked with over the years and some of Cecil's
friends
and associates) are professionals in the field who are unwilling to kiss
the
backsides of the beepers who don't know half as much as they do ... folks
don't like being told they are inferior ... especially by their technical
lessers.

Gary,

It can be done! If you want a 5WPM QSO drop me a private email and maybe we can work out a sched to help you build speed.

I upgraded from Tech+ to Advanced in about a 6 weeks and to Extra in 3 months. Made QSOs nightly on 40 and 80 CW--you will be amazed how fast your speed will build once you get over the initial exhileration (fright)! Got to hide your mic and stick with CW--I made the mistake and wandered into SSB and it took a little longer to reach 20WPM!

I worked QSOs and use Morse Academy to guage my progress and push for another 2-3 WPM.

If you need help, please feel free to drop me a private email.

Boy did this article bring up a lot of memories! :-) Oh well (tm :-)
into the abyss. :-)

In article <5ccnfm$6mc@northshore.shore.net>,
Michael Crestohl <mc@shore.net> wrote:
>I remember the SoCal repeater scene circa 1976 - 1984 as I spent a lot of
>time out there.
>
>The "slime" as they were called inhabited three different repeaters over
>that time frame - 147.435 Mount Wilson, and 146.61 come to mind
>immediately.
>

The other repeater had to be 147.24 on Mt. Hollywood.

>It is true that the content could be politely considered "X-rated". I
>found some of it quite entertaining and some of it quite disgusting
>whereupon I would turn my radio off or change to another repeater.
>However I soon learned that all was not what it appeared - the hostility
>and insulting transmissions were in many cases put-ons - or as they were
>called, "shows". This became quite evident when I started attending some
>of the local flea markets, notably TRW and saw that these people got along
>quite well in person.
>
>During the time frame mentioned above I remember "shows" by characters
>like WA6LEB, ex-WB6JAC, WA6SUD, WA6GVG, K6PXA, WA6LTQ and many more. I
>have quite a lot of tape of this and it still is interesting to listen to
>almost twenty years after the fact.
>

Now there are a few calls I have not heard mentioned in a few years.
Let us not forget WB6VII. I heard that Ed died more than a few years
ago.

>I read and hear a lot about Richard Burton, ex WB6JAC/WB6YIO/KF6GKS. I do
>not condone his activities. But I would like to recall my first contact
>with him back in January 1978 or 1979. I had just arrived in Los Angeles
>and my power supply crapped out. I got on the Mount Wilson repeater to
>try to find a ham near where I was staying in Studio City that might loan
>me a VOM to find out what had crapped out. Richard not only offered to
>help - he loaned me a 12V power supply and insisted on fixing my supply,
>refusing any conpensation except to share a pizza with me. This was
>before he ran into the problems with the authorities that resulted in his
>notoriety and imprisonment later on.
>

Richard could be very nice in person. In fact if memory serves me
Richard was the social events chairman for the Mt. Wilson Repeater
Association (MWRA) for a while.

>In the early 1980s Arnie K6PXA edited the "Free and Open" newsletter which
>was very amusing and entertaining. I still have my copies and read
>themagain on occasion. Also there was the famous .61 record.
>

Not only did I have the famous .61 record, I was on it :-) I wish
I knew what happened to my copy.

>Another significant anecdote - I rememebr several conversations between
>Richard and Ed WA6LE-and-a-BEER that sounded pretty hostile to the point
>of fisticuffs. Well, when Richard went to Federal prison in Lompoc CA
>who but his old on-the-air enemy visited him regularly?
>

I remember more than a couple of incidents about Ed. I remember one
where Ed (WA6LEB) was drunk and sounding depressed and WB6VII was
telling him to kill himself. This happened on 435 and was one of the
few times that the repeater was turned off for non-technical reasons.

>I know that to many the SoCal "slime" gang is a blight on the hobby and
>the area in general. But I always held the philosophy that if you don't
>like what you hear, turn the radio off or QSY. Every major metropolitan
>area has its VHF outlaws - anyone listened to the repeaters in England
>lately? But as long as that element has a place to hang out free and open
>it keeps them off the other repeaters where such activity is neither
>condoned nor welcome.
>
>Michael Crestohl, W1RC

Wonderful point Michael and one that should be taken to heart. At the
same time as all the horror stories there were wonderful things that
happened on 435. There were many good discussions as well as good
times with the MWRA.

The MWRA enjoyed a wonderful resurgence in the early 1980's but
started going downhill rapidly immediatly after David Farraone's
(WA6KOS, the owner and trustee of 435) untimely passing in
May of 1983.

I have quite a few photographs of MWRA activities from those days.
I have a few of them available for browsing. Check out:

I'm sorry if this isn't the right place, but I'm looking for an adaptor for a Motorola HT-600's microphone jack. A friend uses it at his ambulance, but it requires a special "external" microphone. He has a regular one, however the connections are not "normal". Is there any adaptor that he can purchase, rather than this special microphone (which is $75..) for this unit? He has the regular Yaesu type (or Radio Shack "style") microphone.

Thanks in advance.

Please reply by email (read my sig..)

From: wa2ise@netcom.com
Message-ID: <wa2iseE4rBrG.H14@netcom.com>
Source record: 205984

According to a (ARRL? or Newsline?) report saying that the growth of Generals, Advanced, Extra class hams has stagnated, and that only the tech no code is growing. Could a contributing factor in this is the antenna restrictions by apartment landlords or CC&R deed restrictions on antennas? "If I can't put up a decent HF antenna anyway, why bother learning 13wpm and more theory to upgrade to frequencies I can't get on anyway? Noone's noticed my 2M groundplane, but will surely see an HF vertical or dipole."

From: mc@shore.net
Message-ID: <5cn2hr$eod@northshore.shore.net>
Source record: 205988

Hello Marc:

I'm glad that my posting brought back some memories.......I have fond recollections of the late seventies and early 1980s in L.A.

I rememeber you from those days. At the time I was living in Canada and spending a few months a year in LA. I used to hit all the swaps with my friend Neil K6SMF. I remember that you had a SP-600 (I believe) for sale and I drove up to your house on Granada Hills to look at it but concluded that it would be a big hassle to ship it home.

I made lots of tapes of the 435/24/61 machines over the years and when I got back home spent some time editing them down to something presentable. I made copies for a few friends and we just howled with laughter. They were great! Speaking of VII, I have a tape with him in it. He's not the star of that show - more like GVG and Jenson where Ralph keeps yelling at Jenson to "mind your own God-damned business". Remember that one? Also a great show with LED and Richard where Ed really loses it, tells Richard that "all I can say ....fuck yew!, This is WA6LEB!" Real classics!

Since 1984 I have not had the opportunity to travel to LA as frequently and to stay for that long. I remember spending over 4 months in the area from Jan - April 1983. Made some great tapes that year - remember Royce KA6SIK? Wonder if he's still stirring it up? He was great, especially for a 14 year-old! I heard that the only way they were able to get him off the air was to tell his mother what he was doing.

I also remember a get-together after TRW at a local eaterie - everybody was there! It was just like any gathering of friends - no hostility, name-calling, flames, etc.....just like any ham radio club after a meeting. It was unreal! But it made me realize that the whole slime scene was just a show.......although I could see how many hams would be easily offended by it.

Last time I was in LA (three years ago) I listened in on .435 and it was totally different. It was loaded with two-meter CB'ers, no-coders who had absolutely nothing going for them. The only call I recognized from the "old days" was John N6GNQ. I listened for a while but turned it off as it had no entertainment value at all. That was my last visit to LA and I will remember it as long as I live. I remember being rudely awakened at 5:30 in the morning......by the Northridge quake of 1994. Scared Hell out of me. LA is not the same anymore and unfortunately has little appeal for me nowadays.

After posting the original article I dug through my files and found my copies of "Free and Open" and even some of Richard's articles in the Mount Wilson newsletter. I even found my copy of "the" record. One of these days I'll transfer it to tape and maybe even digitize it and upload it. If I get access to a flatbed scanner maybe I'll do the newsletters too.

Nice to run into you again. Still up in the Valley?

73,

Michael Crestohl, W1RC

I have the opposite opinion. Everyone is accountable for the things
they write. One's words on usenet will not go away and no one says you
must visit deja news as the only means of reviewing past statements.
It does no harm to have a "review" of particularly insulting remarks.
Peer review and opinion is perhaps the only tool that exists to
provide any possible self control at all for users who abuse their
freedom to write anything they want and spoil the quality of the
medium for other participants. Peer amateurs and future employers all
have equal access to everything one says. That is an accepted fact of
life on usenet. Jim is performing a useful service for this newsgroup
by providing a convenient summary of these statements. He did not make
them up.

BTW, the posts do not in any way fit the definition of "spam". You may
wish to check your rules of netiquette. SPAM is related to business,
ie, making a quick buck on the internet. It is not related to all
possible postings that may happen to irritate one particular
individual or offend one's particulat piont of view.

GREAT LAKES AWARD MANAGER
MICHIGAN AMATEUR RADIO ALLIANCE
CHARLES "CHUCK" LEMAR -=N8LDY=-
WAS DXCC WAC GLA SM

Proposal 1776

A working knowledge of code will no longer be *required* for any
band
One MUST possess a Code *Endorsement* to USE cw on any band
except in times of emergency... *Endorsements* are grandfathered
to all who have passed cw testing in the past and can be obtained
by passing code tests in the future. In this way we can perserve and
recognize the *skill* of cw and reward those who use it without
mandating it's use by others..... I believe it is better to bend a
little
than to break. CW is a skill and Compromise is the way to preserv
it.
Let us open the Door to the future yet retain and respect the
past.....

E-mail: tekelek@erols.com

End Antenna Restrictions Now, Hurry!!!!!

Gaithersburg , Maryland

FCC PUBLIC NOTICE DA 97-118 ACT NOW!!!

YOUR BEST CHANCE TO END ANTENNA RESTRICTIONS AND COVENANTS.

January 16, 1997: Petition Filed Seeking Declaratory Ruling That Certain Provisions of a Homeowners Association Covenant are Preempted by the Commission's Over-the-Air Reception Devices Rule.

The Commission has received a Petition for Declaratory Ruling from Jay Lubliner and Deborah Galvin asking the Commission to determine whether Potomac Ridge Homeowners Association's (PRHOA) prohibition of outdoor antenna installations is preempted by Section 1.4000 of the Commission's rules. The Petition alleges that the PRHOA restriction violates the Commission's rule prohibiting restrictions that impair installation, maintenance or use of over-the-air reception devices (satellite dishes and antennas).

The Petition is available for public inspection in the Cable Public Reference Room, 2033 M Street, N.W., Room 333, Washington, D.C. 20554, 202-418-7092. Copies are available for purchase from ITS, Inc., 2100 M. Street, N.W., Suite 140, Washington, D.C. 20037, 202-857-3800.

The Telecommunications Act of 1996 allows those who cannot otherwise receive over the air television reception to have a TV antenna 12 feet in height or less regardless of any homeowner's deed restrictions and covenants. As we were unable to see our television without interference, we were in need of a TV antenna, under this new law, to adequately view television. Thus.... the petition to the FCC.

At the same time, you may be interested to note that this Telecommunication Act of 1996 has language that will affect cellular, paging, commercial and amateur antenna restrictions! Two prior notices of rule making are on the books this year which sets precedence which may support the end of antenna restrictions if the FCC holds up this TV antenna ruling next month favorably, by allowing the TV antenna to remain on its rooftop location so that we can at last see television in our home.

For those of you who are as concerned as we are, we urge you to please write a note or letter to the Office of the Secretary, Federal Communications Commission, 1919 M Street, N.W., Washington, D.C. 20554 referring to the case identifier, CSR-4915-0, on all of your letters, voicing your support for us being able to have a TV antenna on our roof. The Commission asks that you should file an original and two copies of your letter or note.

For more information on this act you can talk to the Cable Services Bureau Contact: Eloise Gore at 202-418-1059. Internet: http://www.fcc.gov.

Spam is perhaps not a perfect term but it is close. Since you and
Kehler agree on the code issue I assume anything he does is by
definition perfect. Why don't you do a Dejanews search on his tripe you
might find out who started most of the insulting etc. The fact that no
one does this to him simply reflects that fact that no one really cares
what he has to say. My only objection to the insulting jerks on this
newsgroup and .misc is they have essentially wrecked amy prospect of
meaningful discussion on the news groups. I submit that if you looked
beyond the code debate issue you might find I am correct. But I suspect

you rarely let fact confuse your opinions.

Jerry

Here in Oklahoma City, we sure noticed how reliable cellular phones are on
April 19th, 1995. You should have seen/heard the local media pleading with
users to NOT use their phones because the system was overloaded with calls,
and public officials who, had expected to use the phones in event of an
emergency, suddenly couldn't.

To put it in some perspective, ARRL's membership is at an all time high.
Our financial status is primarily because we have not scaled
back our programs in the face of declining advertising revenues and
relatively flat publications sales. The loss of dealers has certainly
resulted in a drop in the sales of all Amateur Radio publications.

While most of you were being critical in the recent thread about
the new "Worked All Faggots" award, most of you forgot the
co-sponsor.....the ARRL.

I never felt the League did a "bang up" job in its fight(?) against
LAMBDA and their advertising in QST. I think more effort by
the Leagues "legal beagles" would have stopped the queers
from doing any further damage.

Now look what's happened! And you're always warned that these
types of groups NEVER stop at just one thing! Now they want to
flaunt their "butt-f---ing" in front of the awards community!

I think it's time to tell the League enough is enough. Boycott the
ARRL. Don't renew. Tell them why! Tell them you're not going to
support an organization that supports perversion!

From: jdhaas@mtu.edu
Message-ID: <5cnq98$ilp@kirchhoff1.ee>
Source record: 206004

Hello there. I am Jim Haas, KG9IF, QSL/Contest/Awards Manager for the Husky Amateur Radio Club, W8YY, which is the amateur radio club of Michigan Technological University in Houghton, MI. Every year over a festival known up here as Winter Carnival, where everyone takes a couple of days off to enjoy the snow (we get a lot of that up here), we run a special event station. This year's station runs from 1100Z on 30 January 1997 (6:00 AM Eastern) to 1100Z on 1 February 1997.

"So Jim," you ask, "what do I get for working this station?" Well, if you work our station, just send us a self-addressed, stamped envelope suitable for holding a certificate and we will send you just that--a really nice certificate that says you worked W8YY over Winter Carnival.

Below is the frequency list, which is a general guideline and not a promise of where we will be. I can guarantee one thing--if you look around, we will be there. We may not be on, for example, 14.325 exactly, but we'll be on 20 somewhere. We may also do some HF digital modes (we still need a few connectors for that) and some satellite work as well. If there is enough interest among the station ops/control ops, we will work some CW as well.

If you have any questions, comments, or criticisms, just drop me a line at jdhaas@mtu.edu. We look forward to hearing you on the air.

73 de Jim Haas KG9IF

Band Mode Frequency
17 M USB 18.130.0 MHz

20 M USB 14.325.0 MHz
CW (maybe, if
there is 14.130.0 MHz
interest)

30 M CW (if there 10.125.0 MHz
is interest)

40 M LSB 7.262.5 MHz

75/ LSB 3.972.0 MHz
80 M

160 M LSB 1.932.0 MHz

You may find that the "Transmit Battery Saver" mode is on.
If so, the "SAVE" indicator should be on durring transmit.

To turn this mode off:
Hold the knob down for 1/5 second, release knob, and turn it to select
item 15, "TSAV-15". Press knob momentarily, and turn it to select
"OFF". Press PTT to save.

Enjoy the little wonder!

>made the improvement 11.74 db instead of 6 db (the raised cosine occupied
>bandwidth is 66.66 Hz [same baud]). Lets go through the numbers again.

How did you arrive to this bandwidth (for FSK?) ? What shift are you
using for FSK ? If you are using MSK, the offset should be half the
baud rate or 8.33 Hz for 16.66 Bd. If you look at the FSK signal as
two A1A signals modulated by complementary waveforms at 8.33 Hz, the
sidebands are up to 8.33 Hz around each carrier. The upper sideband of
the lower tone and the lower sideband of the upper sideband completely
overlap, thus the total bandwidth is three times the baseband
bandwidth or 25 Hz. Add to this the effects of non-ideal baseband

pulse shaping. I do not know, how you ended up with 66.66 Hz for FSK.

Note that in the A1A case the 83.33 Hz bandwidth is between the
sidebands of the 5th harmonics of the baseband signal. According to
ITU-R, the 5th harmonic is required for aural reception in fading
circuits and only up to the 3rd harmonic (bandwidth 50 Hz in this
case) is required for aural reception in non-fading circuits. The
sidebands of the fundamental frequency (bandwidth 16.66 Hz in this
case) should be enough for machine reception, but appearantly this
requires some means to get bit synch before reception of the actual
data (such as in coherant-CW).

I could not figure out what parameters you used for FSK, so I can not comment on this. I am not sure if you are comparing FSK to machine reception of coherant CW or aural reception of CW.

I meant to say man-made disaster but natural disasters can also happen. Semiconductors are prone to may kinds of static and electromagnetic charges that man can destroy when he wants to.

A simple spark-gap transmitter can be built with minimal parts but I doubt that designing it for AM, FM, or SSB would make sense. If nobody could respond to my morse message, then we have just made communications worse, not better.

>Please tell us why? Just what do you consider a non-semiconductor
>radio anyway? Frankly, I'll put my faith in my Transceiver and HT
>and not some crude substitute. Both are powered by 12v and
>can, therefore, be powered by any many alternative power
>sources that are readily available.

A non-semiconductor radio is a radio that has no semiconductors in it. In WWII, they worked fine and could be powered by batteries.

What I was just suggesting is that getting rid of morse code is similar to our getting rid of tubes. Everything that is made today is replaced when broken and the broken parts are just thrown away. That's fine when you live somewhere where you can take your money, go to the store, and buy a radio. But what happens if you can't?

Gary, N3JLC
btw, I am a network administrator and a UNIX administrator so I am in tune with modern times. I'm not suggesting that technology is bad, just suggesting that it is getting to be too much of a security blanket.

(1) It's Obvious that you seldom, if ever have listened to the Ham Radio
& More Show.
(2) When I got my license, the no-code license did NOT exist.

(3) Mr. McCoy was aware of the content of the "show" at the Convention
before it took place, and extremely few people were unhappy with the
results as more than 200 people were actively involved in a forum.
(4) Have a very nice day......

You aren't the only one to notice this.... Unfortunately, it takes all
types to make the world go around, I guess. Mostly, just ignore those
who don't offer any usefule advice, and pay particular attention to
those that do (they can be a goldmine of information).

>The latest? check out the question about an autopatch via the packet connectors.
> The answer? the guy who answered sent in details of FCC rules and even
>wanted to know the questioner's callsign? Why? Send it to the FCC?
Weird! I don't see why this should have even made it to air, let alone
the fcc....

>It is this stupidity that is killing the ham radio service. Or havent you noticed

Not really, I am 31 and joined about 4 years back. I am in the process
of upgrading. I hope to be something other than "no-code" in a couple
of weeks.

>Peter, KC1QF
>(and proud of it, in case anyone needs to know)

Eric, also proud to be a ham....

You can't possibly be serious. You must be:
1) College student who already knows everything
2) A liberal, who actually knows absolutely nothing
3) A sick idea of a bad joke.
4) Never bothered looking up "Leptin" with a web crawler to find out many
obese folks are that way because of a natural leptin deficiency.

But then again, you obviously aren't smart enough to realize that
discrimination against obesity is as bad or worse than racial, sexual or
any other discrimination. Your claim of obesity being immoral, illegal
and unethical clearly illustrates your predilection for irrelevancy.

Get a life, loser!

I don't frequent this group enough to comment on the "ham cops" you refer to but I can respond to your argument that upgrades and new hams are "non existant" (sic).
Here in the 4 call area we have just exhausted the AE4 extra class block and the KT4 advanced class block. There are code and theory classes all over the area and VE sessions are almost always packed. If you listen to the local 2 meter nets you will hear new hams on every session and on the local 75 meter net, new general licensees are common as well. Perhaps you have mistaken a local phenomenon in your area for a national trend.
73,
Lee (KR4ND)

> realize that he is not kidding; he really is as big a dolt as he appears !

Maybe his role is a whole different one. Even the CATHOLIC CHURCH sports what they call Advocatus Diaboli (the Devil's Advocate). Sometimes, Burt's intentionally vague and contra-ham postings just achieve the opposite effect with most guys. And somehow I cannot help, that Burt is very well aware of that. If this is his motive, he is doing a great job.

Another explanation for his postings actually might be some kind of gratification deficits. With voicing opinions, even objections and flames are some kind of gratification, if only that an opinion has triggered massive protest with some. It is along the logic of those jammers, who jam for being noticed, and who give up the game, if nobody acknowledges the carriers... As long as Burt gets feedback, he will be around with goofy statements, possibly not realizing, that most of his postings lack credibility, as long as his signature shows an amateur radio call sign.

This second possible motivation seems kind of plausible, too, for when looking at K1OIK's homepage on the web, I just cannot help, that most of Burt's intellect is based on second hand opinion.

Dunno, I don't take him serious. This is a newsgroup, and like each good newspaper has to have a comix section, this newsgroup has to have a Burt. In filling kind of a cartoon function, Burt does great.

Just my two pennies of opinion

HUH??? spreak engrish troops. If I've died, then for sure I'd come back as a squirrel and run up Carls' pants legs. As for the ARRL, so what?? so nothing. It's a sig line, just like mn maniac's, just like Carl's, just like anyone. I happen to be An ARRL Life member and am proud that I can support such an organization..no more so than ever cause I know it pisses the hell out of the pompouss putz.

If you have a problem with that, fine and dandy. Quite frankly as stated before, when it comes to the procode/nocode fiasco, I could care less. When it comes to Carl, whatever he's for I'M AGAINST. He's for nocode, I'm just against HIM and his arrogance, he snobbery, his holier than everyone on the face of the earth attitude, his play for pay agenda, his racist, bigoted fat blotted carcass. His welfare, gimme I deserve it more than you..blah blah

Again, if you have a problem fine. Your opinion (which you are very much entitled to) and $1.20 gets me a paper and a cup of coffee (light and sweet)

Enjoy life to the fullest. With an attitude like yours, you'll be stroking out long before I will ever kick off

Uh, guys, wait a minute here...

I'm a brand new ham (one of those much maligned no-code techs), and I'm really excited about this hobby. I also don't have a lot of money to throw around but I do expect to grow in the hobby as money and licensing allow. After passing my test I wandered into my local ham radio sales store, which also happens to be the local Radio Shack. The nearest "real" ham store (Austin Amateur Radio) is a 1 hour drive away. Anyway, the 'Shack was selling a 2 meter HT for $200. Hey, I can afford that. And it even incudes an antenna and power supply :-) So I took it home, powered her up, scanned a few channels (but did NOT press the transmit switch, I AM a law abiding ham!) and enjoyed what I was hearing on the local repeaters. Men and women greeting each other civilly (sp?), enjoying friendly go-to-work conversation, etc. Usually interesting conversation about radios, the local ARES net, antennas, lots of computer talk, and concerned discussion about friends who have not checked into the net lately. Nice bunch of folks who really enjoy ham radio and each other. Yeah, occasionally some banal talk about sore backs or too cold weather, but not much. And then the big day arrived - my ticket came in the mail. I got in my car, scooted down the road (I live in a bad reception area), tuned to the local repeater and FINALLY pressed the transmit switch, "KC5YNP listening!" Shazzam, they talked back! Welcomed me to the net, asked me who I was, offered me friendly and needed advice and were generally glad I was on the air!

Now, I am sorry that 2 meters is polluted where you live, but here in Central Texas folks are still nice, let you on the repeaters without an

argument, discuss interesting and appropriate subjects and are outstanding ambassadors for the hobby. Some day I would love to talk to friends on the other side of the Atlantic and bounce signals off the moon but right now, with my class of ticket, skills and budget the best way for me to get into the hobby (and stay interested) is on 2 meters.

And now you want to support "selling" (that's what it will be, an FCC auction) the 2 meters off to commercial interests with no compelling interest in the spectrum other than for profit. Yeah, ham radio may not be so high tech anymore, and the number of hams may not be that great (compare the number of hams to the number of cell phone users) but I do believe there is compelling national interest in preserving large portions of the spectrum for amateur use. Amateurs demand nothing from the federal government for the privelige to use the allocated frequencies. However, the government demands quite a bit (as viewed in today's "gimmie' everything I want for free or I'll sue" society) from people who want to operate on those frequencies - a test that demands you display some basic technical knowledge about the art and science of radio. In fact, I would argue that because they have demonstrated technical proficiency in radio then hams have a more compelling right to access to the frequencies than a for-profit organization. What about the "compelling national interest" I mentioned above? Well, getting a ham license or upgrading for access to more bands/modes requires a certain measure of self improvement in a highly technical subject. Any program where the government trades access to a non-depletable resource (a radio frequency) for a demonstration of technical proficiency is a good thing. We are using access to portions of the airwaves as a way to compel people to improve themselves - not bad! And as a 17 year Army veteran in another highly technical field I can tell you that any bright, self motivated kid with a personal interest in a technical field, be it ham radio, C++ progamming, or souping up motorcycles, is worth one hell of a lot more to me, the Army and the nation than his buddy who came in off the street with a high school diploma but no motivation. I've had hundreds of young soldiers work for me and the ones that stand out are the ones that worked hard to improve themselves. The rest were just there.

Well hey, have I rambled? Yes. Are there holes in my logic? Absolutely. Is my two cents worth the same as yours? You bet! Take it for what it's worth and have a good day!

Fred, I think that you seem to be ignoring the fact that in Amerika, sometimes people and organizations are forced by the legal system to support things that they might not have normally supported otherwise.

The ARRL still suppports ham radio. What other organization does that as effectively as the ARRL does ?

: see an HF vertical or dipole."

Obviously NO. A clever HAM can always find a way to sneak up an antenna.
We all hope that there will be a no-code General class soon, and learning
the code will be in the same class a learning latin, for archaic fun.
A lot of no-code tech's already got their rig's and antennas, just
waiting for the when there is no discrimation between code and codeless
hams, and can fire up their rigs, and begin the migration below 50 Mhz,
where all TRUE hams belong.

>The ONLY logical reason for the existance of a club like LAMBDA has to be
>self-fulfillment of some kind.

Well, one of the many things I value is objective thought. Just because
I read about a ham radio club for "gay, lesbian, bisexual and transgendered
people and their friends" doesn't mean I immediately start thinking about
sexual practices. It just amazes me that many people say "gay ham clubs
are wrong - gay people commit sodomy". Is there any more sodomy taking
place at LARC meetings than at any other amateur radio club meeting?

Just exactly what is the connection between a "gay ham club" and
"gay sexual practices"? You're making this connection, but I don't
see it in the LARC announcements.

If you have a problem with ham clubs where some of the members privately
engage in sodomy, I suspect you're in deeper trouble than you can
fathom. Regardless of which survey or study you choose to believe, it is
clear that a significant portion of the adult population engages in sodomy
on a regular basis. If you have a problem with being in the same club
as people that practice oral and/or anal sex, the statistics indicate
that there is no club you'll find acceptable.

Something that you're overlooking is that being a member of a minority
presents certain kinds of social challenges. My opinion is that the
average American is horribly naive when it comes to the challenge of
being a minority. We've got a huge country that is, despite some
very remarkable differences, ironically homogenous. I've lived in
or visited enough other countries to get what I think is the slightest
glimmer of a notion of what being a minority feels like. Frankly,
though I'm not gay, I *think* I can relate to what it feels like
to be mostly like everyone else but just different enough to not
immediately fit in after living in England for a year. There were
times it felt good to be with other Americans, even if we didn't
talk about America or recite the pledge of allegiance.

I suspect that some people join LARC just so they can socialize with
other amateurs without concern that someone might be offended and/or
become offensive.

Note that I'm completely overlooking moral judgement about homosexuality.
It just isn't my place to pass that kind of judgement on other people.

>I have read a lot of messages in this thread that are emotionally charged,
>and this is an issue that is going to draw that kind of fire. The only
>other one I can think of that might be comparable is the abortion issue.

>is not behavior that The Lord would approve of. I think each of us has to
>determine the answer to that question as individuals of many faiths, who
>have their own individual value and moral standards to follow.

I'm still not sure what LARC has done to "throw it in your face". The
announcements I've seen simply say something like "LARC, a club for
gay/lesbian/bi/xgen people and their friends, is sponsoring some
ham radio event". The announcements do *not* say "LARC, a club full
of people that engage in all kinds of wicked sex acts, is coming to
get all you heterosexual prudes". If the mere mention of a gay ham

club is throwing anything in your face, you're too sensitive. Get over it. I'm not a Mormon, but I have no problem at all with the clubs for Mormon hams. Believe it or not, there really are people that believe Mormonism is a cult and therefore "wrong", and I *know* that Mormons are actively recruiting (they knock on my door all the time). I've never had a gay missionary knock on my door.

What I've seen are reasonable announcements from LARC followed by voluminous vitriol from people getting into *my* face. You figure out what that looks like.

>I think if LAMBDA wants to exist as an organization, it can do so without
>the consent of a national organization, whose members (for the most part)
>are likely going to feel offended with their presence. Most won't voice

>affiliate with LAMBDA. I would also guess that the percentage would be far
>less if you asked it they have a right to do whatever they please behind
>closed doors. THIS is the real point in the minds of many of us, I believe

I don't know what the people at my local club do behind closed doors, and I don't know what the people at LARC clubs do behind closed doors. I don't care. The ARRL really shouldn't care, either. If LARC meets the standards for ARRL affiliation, that's all there is as far as I'm concerned.

They have the contest in CW also. Just on a different weekend. Why not
try it if you can handle some very good CW. Some of the youngest
operators in Ham Radio are members of 10-10 so your theory seems to
be a little at odds with the actuals.

then again, i've never seen league pubs in places like Barnes and Noble, Waldenbooks, etc.

maybe it's time to branch out.

maybe the league needs an infomercial or two and some cars to set on fire (i don't know why, but they seem to do it in all the infomercials..)

It's obvious..Carl's attempts to disprove the truth..MUCH FUNNIER. Ever notice how whenever Carl makes a statement, it's gospel IE: the code keeps technogeeks out of the hobby..never has to prove his statements, always expects to be taken at face value, YET, everyone else must spout volumes to back up their opinions. What a pompous putz

Then he did not answer my question and went off at a tangent. He claims CW'ers are interested only in 'beeping' and not designing and building. I questioned why there isn't much designing and building activity above HF (in my experience), where there is no CW requirement to impede the enthusiastic, while there is much designing and building activity by CW'ers on HF (again, in my experience), counter to his claim.

> <... deleted discussion of professional RF types not wanting to become hams either because they work with RF all day or because they dislike the taint CW operators induce.>

Perhaps, perhaps not. However, I see this as a separate question. Carl has claimed repeatedly that the CW operators are not interested in designing or building equipment. This is unquestionably false, at least in my realm of experience and seems false in general, given the responses I've seen here.

>
> If you want your eyes opened, browse the rec.crafts.metalworking
> newsgroup and contrast what you see there to what you see here.
> ...<SNIP>

Yes, their's is an enviable group, as is rec.audio.tubes, rec.antiques.radio+phono, etc. Curiously, severe infighting has pretty much ruined the seemingly pristine group sci.astro. I am sometimes sorry I get involved in the arguments here. But when I read claims such as Carl makes, I feel compelled to contradict him with what is true in my circle.

> ...<SNIP>
> Yes, I'm talking about Incentive (to pass faster Morse tests) Licensing,
> and all that has followed from it.
>

Here is where I disagree with you. While I don't like unnecessary government interference, it seems so much more effort is spent spouting and foaming about the requirement than would be spent learning the code. I still have a big problem with objections to learning something because it is perceived as useless/antiquated. This is the argument of a schoolchild who doesn't like learning history/math/science/art/poetry

because, "I'll never use it".

I must reiterate, although I disagree with you, at least your arguments are reasoned and I haven't read in them any naked derision of CW operators (unlike in Carl's).

Henry 2K Classic HF amp. Uses a pair of 3-500Z's and will run 1500W out conservatively. The amp has had very little use and is less than 1 year old. Excellent condition. The 2K Classic is the floor standing (console) model. Lists for over $1800 new, will sell for $1300 OBO. If interested, drop me a note or call me at (805) 949-9833. Thanks.

>No .. I'm saying that they refuse to become hams at all and we lose all the
>benefit of their skills and knowledge ... we're not drawing in the people
>who

Could it be that they don't want to participate in a hobby that's too
closely related to their profession?

Also, if a professional *is* really interested in conducting communication
research they don't need a ham license. All they need is a lab. When
on-the-air tests are to be made they can operate under Part 15. If
they *really* need to xmit on the hams bands surely they'll be able
to find an amateur willing to assist.

Those engineers at Boeing who design aeroplanes don't necessarily have
pilots' licenses. Those who design the space shuttle certainly don't
fly it.

>really KNOW radio and could teach the youngsters (and teach the beepers
>a thing or three if it weren't for their closed minds).

There are about 2000 subscribers to the QRP email list. Almost all
do CW. Most of the talk that list is in regard to *building* radios
and operating the radios they've built. Now, how many SSB, FM,
and Digital operators are building their own gear, Carl? Carl??
CARL!! Answer me!

Dear Paul:

If you're looking for EXCITEMENT, instead of "fine business, old man,
name here is Bill and my rig's an Icom..." you might check out the
Arlington Radio Public Service Club, better known as the Insomnia Net.
Hated for years in the DC area repeater community for its "free
speech" philosophy, The Insomnia net has survived because, frankly,
no one's really bothered to do anything about it. It's on 146.625.
It's especially hated by NVFMA and GMRA.

I own a Yaesu FT-51 HT on both of those bands. Seems to work pretty well
but it can be a bit pricey (mine was an Xmas gift, otherwise I wouldn't
have been able to afford it) and you'll DEFINITELY want to keep the
instruction manual handy for a while.

It can't be directly compared to SPICE simulators, because it isn't. It's a linear, frequency-domain simulator, as opposed to SPICE which is a non-linear time-domain simulator. Whether it's worth the money is a judgement only you can make. If you have a use for the kind of results the ARRL Designer can give you, you can't get them by any other means for anywhere near the price, and it's a tremendous bargain. If you don't have any real use for the results, it's another toy and its value depends on how much you like to play with toys.

Hi folks!
I have made a LOT of improvements at my web site.

Probably one of the largest lists of hyper links to great ham radio sites -
classified and grouped according to the following topics:

QRP
DX
CONTESTS
VHF
BOATANCHORS
BUY & SELL
HOMEBREWING
NETS
ARRL & FCC
QSL INFO
TUBES
GLOWBUG CONSTRUCTION PROJECTS
MODIFICATIONS
HAM CHAT LOCATIONS
RADIO HISTORY
PARTS
... and many more!

You name it - you can find it at my web site! Best of all it is FREE with no
strings attached, no annoying e-mails afterward etc.

Take a look and tell your friends:

Hi guys.
I have an interesting looking transformer here and wondered if ANYONE knows what it is or can help me find out?

It is marked TRANS INC. TM 4075

It looks to be about a 50 watt class of transformer, but I have no idea if it is a power transformer or an audio transformer or what!

It has about 8 lugs on each side, and they are numbered 1-16

Any ideas? Please e-mail me

Am putting up a 2 mtr repeater and was wanting to try and build a set
of cavities rather than buy them. Anyone out there have a set of plans ?
I have a set that is in the 22nd edition of the Radio Handbook, but they
are vague and missing so measurements.
If you have a set of plans, I would appreciate the help.
Also, if you have a set for 440 that would also help.

My fault....

I should have elaborated more....

"AIDS kills people who particiapte in immoral activities.....
and those immoral activities will also claim innocent victims".

Yes....Arthur Ashe was an innocent victim of AIDS. But the tainted
blood he received came from a person who WAS NOT an innocent
victim and chose to live an immoral lifestyle.

Common sense will tell you that if you get rid of the pre-marital sex, the
extra-marital sex, the homosexual sex and the IV drug use....you will
no longer have AIDS!

But, of course, many fags and fag lovers lack common sense. They
can't even realize that a rectum is meant for things to come OUT of...
not to put things into....

Now see what these perverts at LAMBDA have gone and done? They've
done just what they've wanted to do! Bring attention to their lifestyle
through ham radio! We've now bought into their little scheme, and are
arguing about fags and fag issues on a ham radio news group!

> regular one, however the connections are not "normal". Is there any
> adaptor that he can purchase, rather than this special microphone (which
> is $75..) for this unit? He has the regular Yaesu type (or Radio Shack
> "style") microphone.

Nope... generally speaking, Motorola radios only work with Motorola
accessories. Chances are, you can find a used shoulder mic for the
HT-600 at a hamfest somewhere real cheap. Bring your radio to make sure
it works. You don't want to fumble around with third party equipment
and adaptors -- it will cause misery for you, and I doubt adapting a
cheap mic with the two prongs to a Motorola radio would work in the
first place.

Try looking in newsgroup rec.radio.swap to see if someone has what you
are looking for... or post a message looking to buy.

Hope this helps.

2350. Little LEO Spectrum, And An Idea To Solve It?

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-30 00:00:00 UTC
From: jcwren@atlanta.com
Message-ID: <3306af4a.87862359@nntp.atlanta.com>
Source record: 205883

I'd like to throw up a suggestion regarding the Little LEO satellites, the demand for spectrum for them, and the threat to the amateur radio spectrum.

This idea is not completely thought out, because I don't have enough facts yet, so bear with me, and add your thoughts.

Broadcast television occupies nearly 500MHz of the spectrum below 1 GigaHertz. In the spectrum lie roughly 69 channels, which 12 represent VHF, and the remainder UHF. Channels 2-13 occupy roughly 60MHz to 220MHz, while channel 14 start at about 475MHz, and go up.

In any given area, at best 15 channels are used. This is because of guard banding (can't have channel 2 next to channel 3), market saturation, and probably several other factors I don't know about.

Yet another fact (yes, this is all leading up to something), is that for most areas VHF channels are much more desirable to be on, while UHF is considered the "trailer park" or AM of television. The service area of UHF stations tends to be much smaller. This is why on VHF it's more desirableto be on channel 2 instead of 13, and on UHF it's channel 14 instead of channel 69.

With the advent of cable TV and DBS satellites, many people are moving away from using their local broadcast stations, with the exception of local news.

Why not let the Little LEO people have some of the UHF spectrum? Perhaps channels 25 to 35 or so? Let the Little LEO people pay to move the existing stations, then if they want to, pay the TV industry to buy the bandwidth.

Now, according to Gary Coffman, with the advent of HDTV, the goal is to free have all VHF stations off the air in 8 years, have all the HDTV stations in the UHF band, and there, they'll be able to run adjacent channels.

Does this mean that any metro area will only need 15 or so frequencies to serve their area? I would tend to think so, because I really believe in market saturation. After all, how many channels do you want to see "Charles in Charge" on at the same time? How many network affiliates can you have in an area? (ever seen NBC on 2 stations in the same city?)

I don't know what will become of the 72 or so MegaHertz that will be freed up when the move to HDTV is made. I can be pretty sure

the amatuer 2 meter band won't be expanded (in spite of the fact that I *personally* think 2 meters is a wasteland, I'd like to see the weak signal and satellite downlink area expanded).

One final point. The FCC isn't going to tolerate "warehousing" of spectrum anymore. In a sense, hams are guilty of this, although not deliberately. It comes from our lack or inefficient use of spectrum. If we don't use, and use it wisely, we *will* lose it.

So, go experiment. Go play with spread spectrum. Go play with new digital modes. Don't send CW (they don't consider that efficient use!). Don't go put up another 2 meter repeater. Do put up high speed digital networks. Play with multiple channel access repeaters. Let's use our bands!

2351. AutoFAQ Project on rec.radio.amateur.misc

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-30 00:00:00 UTC
From: pschleck@oasis.novia.net
Message-ID: <5cpp9m$7kp@oasis.novia.net>
Source record: 205884

About 2700 of you know what I am referring to. In September of 1996, I started discretely mailing an introductory letter to all posters to rec.radio.amateur.misc. This is accomplished via a special Perl script originally written by comp.infosystems.www.* FAQ maintainer Tom Boutell, who uses it on comp.infosystems.www.authoring.html, to send each poster such a letter once, and only once. It runs from a Unix cron job on my host every morning at 2 AM and queries my local news server via NNTP for the headers of any new articles posted to this newsgroup. About 15-25 new posters on average receive the message each day.

I didn't announce it before starting because I wanted to avoid a lot of the fractious debate (mostly by a visible and confrontational minority) that precedes any project discussed on this newsgroup. If it didn't work out, I wanted the option to discretely discontinue it. If it did work out, I wanted to point out the minimal bother to experienced users and most readers. I did, however, consult with the rec.radio.amateur.* Working group (rra-wg@theporch.com) which consists of most of the FAQ maintainers and rec.radio.amateur.* reorganization veterans, as well as my local site administrators here at Novia. The response was enthusiastic. Also, similar projects have had a positive track-record on comp.infosystems.www.authoring.html and comp.lang.perl.misc.

Here's a breakdown of recipient's reactions to the letter over the last 4 months. All feedback was politely replied to, usually with a version of the rebuttal arguments given below:

A half-dozen people strongly objected to it (spamming and junk mail seems to have rubbed sensibilities raw with regard to receiving unsolicited, possibly automatically-sent, E-mail; experiences in other newsgroups demonstrate it to be "just barely redeeming" in terms of dealing with the massive influx of new users)

Another half-dozen thought it was a bit wordy (the message needs to be "one size fits all" and some recipients might be very confused without some background explanation; the letter attempts to get to the point as quickly as possible, but pragmatically is also optimized to minimize the amount of followup correspondence I have to engage in)

Another half-dozen insisted that they never posted to rec.radio.amateur.misc (all of them without exception did post, but it was from following up in another newsgroup to a cross-post, and not realizing what was on the Newsgroups line)

About two-dozen complimented me for posting it (which I appreciate)

The overwhelming majority did not respond, indicating one of several possibilities:

- they approve of it
- they disapprove, but not enough to bother replying
- the mail was misdelivered (I get a few bounces, often from deliberately munged Reply-To: addresses to ward off "spam")
- they don't care

Incidentally, here are the top-40 posters according to my statistics (the number represents how many articles they have posted since September). Notice the very sharp roll-off, further confirming the suspicion that most activity on this newsgroup is from a visible, often confrontational, minority (another interesting statistic is that slightly less than half of the recipients only posted once):

36 myers@sun.com

35 rwc@ips.oz.au
35 jim@rst-engr.com
35 ac6v@netcom.com

So, my impression is that the project is at least a qualified success, and should continue in its present form. At the very least, it seems to be substantially non-controversial (and having primed the previous-poster database with over 2700 E-mail addresses, the chances of bothering an experienced reader with an unneeded introductory message is greatly reduced, and will get even smaller with time).

I'd be interested in hearing your opinions on this project. I'd also like to solicit volunteers to initiate similar projects in some of the special-topic newsgroups (perhaps starting with my previous-poster database as a baseline, and modifying the letter to contain pointers to the more topic-specific FAQ's and information; the .digital.misc, .homebrew, .equipment, and .policy newsgroups seem to be good candidates for a project of this type).

For those who are curious, here is the current version of the letter, slightly modified in response to feedback as the project progressed.

Subject: WELCOME to rec.radio.amateur.misc
Precedence: bulk

Hello,

As a result of the great success similar projects have had on high-volume newsgroups (often with high novice-to-expert ratios) like comp.lang.perl.misc and comp.infosystems.www.authoring.html, the rec.radio.amateur.* Working Group (*) has chosen to implement an automated, first-time-poster, welcome-message mailing service for this newsgroup as well.

This brief E-mail message is automatically sent to every new poster (or cross-poster) to rec.radio.amateur.misc (and its associated mailing list, Info-Hams). Please note that even if you don't read or subscribe to rec.radio.amateur.misc, you may have inadvertently crossposted to that newsgroup by following up to an existing article crossposted to many newsgroups, including rec.radio.amateur.misc (as the default behavior of most newsreaders is to inherit all of the target newsgroups of the previous article when following up). You should only receive this message once. My apologies if the program contacts you twice, perhaps at two different accounts. This is not a flame (criticism), only an attempt to help newcomers get the most out of the newsgroup. As this message is sent automatically, it is also not necessarily a criticism of your posted article. In addition, as this is an unmoderated newsgroup, this is also not an attempt to impose an arbitrary will or authority on other participants. The information provided here represents good consensus advice that has been gathered over the years by experienced participants like myself. I hope you will consider it in that spirit.

If you are an experienced radio amateur and/or USENET participant who may have posted before, I apologize for inconveniencing you with this message (This service was initiated on September 19, 1996, so it considers everyone who has posted after that date a new poster). Keep in mind that it is intended to help inform newcomers and cut down on redundant posts, which you then won't have to read. Some of the resources in it may prove useful to you anyway, however.

Please look at the following resources, which will often answer your questions without the need to post at all. Every post to the newsgroup consumes the time and effort of readers all over the world, and your cooperation is essential to make the newsgroup useful for everyone. A little effort and expense on your part can save a great deal of effort and expense for others.

Thanks!

* * *

1. The Amateur Radio Frequently Asked Questions (FAQ) List, formerly maintained by Diana Carlson, KC1SP and Ian Kluft, KO6YQ, has recently been resurrected by John Seney, WD1V. The majority of the original content of the FAQ remains the same, but now it's a hypertext document with hundreds of links to radio-related sites and is a significant resource to all students of amateur radio - regardless of their license status. It may be accessed via your World-Wide Web (WWW) browser (such as Netscape, Mosaic, Lynx, or Internet Explorer) at:

http://www.mv.com/ipusers/wd1v/hamradio.faq.html

It is also available in text form. Send an message to John's E-mail address below with the words "HAM FAQ" on the subject line.

Please direct any submissions, feedback, or administrivia regarding the FAQ to john@wd1v.mv.com.

2. The Amateur Radio Elmers Resource Directory is an excellent supplement to the FAQ as it's a directory of "Elmers" (mentors, experts, and gurus) for amateur radio who can answer questions via Internet E-mail and via the various resources (such as special-topic FAQ Lists and WWW pages) that they maintain. It is accessible both as a WWW page:

http://www.novia.net/~pschleck/elmers/

and as flat text files:

ftp://ftp.novia.net/customers/pschleck/elmers/

Please direct any submissions, feedback, or administrivia regarding the Amateur Radio Elmers Resource Directory to elmers-request@novia.net.

3. The Guide to the Personal Radio Newsgroups, written by Jay Maynard, K5ZC, provides an excellent overview to all of the USENET newsgroups devoted to amateur and CB radio. It may be accessed from:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/personal-intro

4. A Guide to Buying and Selling on Usenet, also written by Jay Maynard, contains a number of good pointers for reading and posting articles concerning the buying and selling of radio and radio-related equipment on the USENET newsgroup rec.radio.swap (which is the only appropriate forum for such articles). It may be accessed from:

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/swap-guide

Please direct any submissions feedback, or administrivia regarding the above two resources to jmaynard@nwpros.com.

5. The national amateur radio society of the United States, the American Radio Relay League, has a presence on the Internet. You may access their comprehensive and informative home page at:

http://www.arrl.org/

or their automated file server by sending a message with the word "help" to:

info@arrl.org

(They also have information about amateur radio organizations in other countries.)

6. Read the newsgroup first to see if your question has already been answered. You may also view, and search for keywords in, older news articles (going back to March of 1995) at the DejaNews archive:

http://www.dejanews.com/

Many topics have been discussed before, often in great depth, but the articles have expired from your local news server. Services like DejaNews allow Usenet a much longer "institutional memory" that can greatly benefit both new and experienced users.

7. If you do post to the newsgroup, give as many details as possible. After you post, read the newsgroup for a week or two to see all replies to your posting. If you wish, ask for responses by E-mail and offer to post a summary if others are interested in the answer to your question.

8. Remember, USENET newsgroups are based on the idea of mutual aid. USENET only works if we put as much into it as we get out of it. Good luck with your experiences with amateur radio and the amateur-radio-related USENET newsgroups.

73, Paul W. Schleck, K3FU

(Text of article adopted from Tom Boutell, World Wide Web FAQ Maintainer, with modifications.)

(*) The rec.radio.amateur.* Working Group is an informal group of experienced radio amateurs and Internet users who coordinate with, and assist, one another regarding FAQ lists, Usenet newsgroup reorganizations, and other projects. A semi-public Internet mailing list, rra-wg, was created to support this intercommunication. Anyone is

welcome to participate, though it is an expert forum where newer users may prefer to just listen, at least initially. To subscribe to rra-wg (and join the rec.radio.amateur.* Working Group), send E-mail to listproc@theporch.com with "subscribe rra-wg" in the body of the message.

>with such a response.

You are misinterpreting what Carl is saying. He is *not* saying that many existing code test free Techs are professional engineers, though certainly there are a few. What he is saying is that many professionals, aspiring professionals, and technically inclined members of the public are *not radio amateurs at all* because of their perception of of the amateur service as represented by those Carl calls "beepers". In other words, they aren't interested in being considered second class citizens in a hierarchy dominated by manual Morse receiving speed skills.

That image of amateur radio as a Morse speed dominated hierarchy taints the perception of amateur radio in toto among technically inclined non-amateurs. It says the service is backward and not interested in technical advancement because its primary criteria for advancement is based on a technically obsolete manual skill.

Now of course the majority of technical professionals might not want to become involved in amateur radio even if it were percieved as a modern and relevant activity. They might just see it as a busman's

holiday and prefer to use their free time for something totally unrelated to their professional lives. But it does seem that many technical professionals *are* interested in technical pursuits outside of the workday. Like the bus driver who likes to go for a drive on the weekends, they want to do what they like and know in a less structured environment than that of their workplace.

The problem is, amateur radio doesn't appear to be one of those technical pursuits thanks to the taint of a manual Morse speed dominated heirarchy. Instead we find these people migrating to amateur computng, to amateur metalworking, to audiophile pursuits, to amateur photography, etc. They pursue technical activities, but not amateur radio. And that's a shame, because amateur radio has a lot to offer this sort of person, and this sort of person has a lot to offer amateur radio.

If you want your eyes opened, browse the rec.crafts.metalworking newsgroup and contrast what you see there to what you see here. There is no sense of caste there. What you see is a large group of technically inclined people striving for technical excellence and openly helping each other. There is little sense of competition or animosity among those at differing levels of the activity.

That's the way amateur radio *should be*, but sadly isn't because of the formalized caste system under which it operates, and the divisions that has fostered (and let fester for the past 29 years). Yes, I'm talking about Incentive (to pass faster Morse tests) Licensing, and all that has followed from it.

2355. Any DOS programs to connect to FT-50R?

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-30 00:00:00 UTC
From: csledge@why.net
Message-ID: <32f4bb33.33101539@news.why.net>
Source record: 205888

I've got an HP 200LX Palmtop and an FT-50R and I'm looking for
something similar to the ADMS software that will run on DOS instead of
Windows. I'm getting tired of lagging my laptop around when I only
need it for the ADMS software.

Please respond via e-mail also.

TIA

Colin Sledge

A very good reference for this and other ionospheric topics is "The Solar-Terrestrial Environment" by J.K. Hargreaves (Cambridge Univ Press, 1992). According to Hargreaves, while measurements clearly show this reduction in F2 electron density, the theoretical understanding of the phoenomenon remains "one of the prinicipal remaining puzzles of the mid-latitude ionosphere". Hargreaves goes on to talk about some of the possible explanations which include changes in the thermospheric winds, conditions in the protonosphere, and heating from the magnetosphere.

I don't know whether there's been any recent progress (in the last few years) that further elucidates this issue.

Echoing what Roy says, if you are interested in modeling passive frequency
selective networks, and amateurs often are, RD is a good tool. If you want
to model the behavior of oscillators or mixers, or an amplifier driven beyond
Class A, then it will be of little use, and you'll be far better off using
SPICE.

Let's see.... what is it that you find distasteful and contrary to the very roots of your values and your faith? There are some of us, me for one, who find homosexual behavior to be totally offensive. It attacks the roots of what we have been brought up to believe is right. But putting that aside, the real issue here is whether or not the presence of such a club is in the interests of the advancement of amateur radio, or international good will, etc. I am sorry to report that I do not see it. The ONLY logical reason for the existance of a club like LAMBDA has to be self-fulfillment of some kind.

I have read a lot of messages in this thread that are emotionally charged, and this is an issue that is going to draw that kind of fire. The only other one I can think of that might be comparable is the abortion issue. The LARGE PREPONDARANCE of ARRL MEMBERS in my Section (who I have spoken to about this) DO NOT WANT LAMBDA'S PARTICIPATION. I think we have a right to determine who we want to affiliate ourselves with, and who we don't. Most folks would not go where they are not wanted, but "these people" seem to enjoy throwing it in our faces. So, please don't be upset that they get it thrown right back at them, though I do not profess that such a reaction is the "Christian" thing to do. I am not qulaified to decide what is, and is not behavior that The Lord would approve of. I think each of us has to determine the answer to that question as individuals of many faiths, who have their own individual value and moral standards to follow.

I think if LAMBDA wants to exist as an organization, it can do so without the consent of a national organization, whose members (for the most part) are likely going to feel offended with their presence. Most won't voice this, unless asked. I doubt that I am wrong or prejudiced in saying that I would bet that a minimum of 2/3 of our membership would vote not to affiliate with LAMBDA. I would also guess that the percentage would be far less if you asked it they have a right to do whatever they please behind closed doors. THIS is the real point in the minds of many of us, I believe

Burt is one of those guys, in my humble opinion, who enjoys causing problems. He is not the first, and he will not be the last. Aside from some humorous references to the man, I see no reason to pay him any mind. Guys like Burt usually never hurt anyone. All the tought guys I know just do what they're going to do, and you never hear or see them coming. So all we really have here is a sick, ignorant fool who needs attention. It is OUR CHOICE to give him what he craves, or starve him out of the kitchen, wot?

I will confess that I have "bit the burt bullet" myself, but enough is enough. I find it humorous to bait him right back, but I have come to realize that he is not kidding; he really is as big a dolt as he appears !

Hate to be the bearer of bad news, but there is really quite a bit of commercial activity on 220-222 Mhz. The bulk of it is ACSB, business service radios. In fact, there is a 20 channel ACSB "trunked" system here in Dallas-Fort Worth, which currently offers 3 towers for 15 bux a mobile. It covers an area about the size of some small states !

Hmmm... that's good logic. I don't like homosexuals much either, as you can probably tell from my posts. I do, however, still support the ARRL.

By your logic, I should defect to Russia, or something like that. I don't much care for what our government does, and I DARN SURE know they don't have the interests of the People (Members) as their primary interest either.

Of course, I am loyal to my country and would never defect. It is not perfect here in America, but it is the best there is. I can say the same for the ARRL.

Chris, relax! I use a straight key too. I was shocked that he
didn't know how to wire the straight key.

Use a stereo jack, wire the ring and tip together, and attach the
resulting two wires to the key (shield and ring/tip). Don't forget to
turn off the auto-keyer.

It's people like you with closed and BIGOTED mindsets that are killing ham radio. Every book I ever read about ham radio before actually getting my ticket said the same thing:

"There's something for everyone in ham radio".

Well, myself, along with every black, gay, lesbian, asian, freaked out, communist and other individuals who don't fit in to your blanket category of "normal, moral, god fearing people" (whatever that means) fits into that category. The word "everyone" means literally that. EVERYONE.

Deal with it. This is America.

And to top it off, if you don't want people calling you an overweight white-trash trailer-park living honkie, then get a little respect for people that are different than you.

Peace, out.

According to the KA9FOX Web Site for DXers and Contesters, there is an Icom Radio Discussion List by WB5KXH. To subscribe send the following message to listserv@bobcat.etsu.edu :

Subscribe ICOM your_name callsign

I did this a week ago and received two sign-on messages, but have not seen ONE Icom message come through. I then sent an E-mail to WB5KXH asking about the activity and number of subscribers and have not yet received a reply.

Maybe if more interested parties subscribe, something will happen!

Where do you live? In the Detroit area 220 has quite a bit of
commercial traffic on it. Even the US Postal service (not UPS)
is installing 220 equipment on postal vehicles now for tracking
purposes. It's been used ever since we lost that part of the band,
people just kept spreading rumors that it wasn't being used even
though it was quite heavily in many areas.

I have the following items for sale:

Yaesu FT-990DC HF rig with optional 500 Hz CW and 2.0 KHz SSB filters.
Also
have the matching SP-6 Deluxe speaker with optional LL-5 phone patch built
in. Entire system is less than a year old, little use and in mint
condition.
Asking 1700 OBO for both. Might consider splitting. If interested, drop
me a note or call me at (805) 949-1244 or (805) 949 9833. if busy.

I suspect the postings were very much 'tongue in cheek' to test the reaction rather than actualy support the notion of 'giving away' the 2m band. But remember this, the LEOs span the world - what hapens in the USof A will happen elsewhere - and we don't want to lose 2m either!

There will be a lot of opposition in other countries similarly affected. Taking a laid back attitude won't help the rest of us at the WARC bargaining table.

Len Winkler was on his show...."Ham Radio & More".....crying
about a lack of support and sponsorship of his show!

What balls! I happen to know that Mr. Winkler has been
approached SEVERAL times by potential sponsors and
has not returned a single phone call or fax to these people!

The problem with Mr. Winkler is GREED. He was looking for
the BIG BUCKS from Kenwood, Yaesu, Icom, etc. But when
little "mom and pop" businesses came along to offer support,
he tossed them aside with an "up yours"! (Similar to how the
League treats ITS "mom and pop" advertisers....)

Get over it, Len! You're starting to sound like Brother Stair
on WWCR. ("I know someone has that MILLION DOLLARS
out there that I need!")

2397. Part 97 Technologically too restrictive?

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-31 00:00:00 UTC
From: hans_brakob@adc.com
Message-ID: <854727088.11997@dejanews.com>
Source record: 205722
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Lyle Johnson of TAPR fame made a speech last fall in which he postulated that a major threat to the future of the Amateur Radio service was the technological restrictiveness of Part 97.

Not to put words in his mouth, but it seems he was saying that 97.1(c) charges us to "contribute to the advancement of the radio art" and then the rest of Part 97 turns around and places restrictions on our ability to do
that.

His feeling of how Part 97 should read is -- "Here's your band limits. Have a nice day." He said in his speech that he thinks we could fit the whole of Part 97 on this side of this three by five card in large type.

Obviously that is overstatement to make a point, but you get the idea.

Leaving all the "code testing is good/code testing is bad" arguments aside for this thread, what are your feelings on Lyle's speech?

Should we trash all our current band plans, and say "let the best mode win"?

Would that encourage technological innovation? Or just foster a "QRO war"?

Would we then REALLY learn how to best share our assigned spectrum, or would chaos
rule?

What are your thoughts, (parking sarcasm, flames, and religious fervor at the door for purposes of this
thread)?

Probably true. I try to always hold to the use of reason and logic.
You may disagree with my reason and logic, but I won't
call you names or otherwise denigrate you as an individual.

>and what they hear on the air.

They really don't even get that far. Most people won't buy an
expensive receiver first.

>Why join a group of people that are rapidly becoming nothing
>but multiple band CB and CW operators.

Not sure what the CB reference is, and given that CW as
a use is optional, I doubt that is a turn-off. As I and other
no-code test advocates have stated repeatedly, itisn't
the use of CW that is in any way being argued with, it
is the mandatory CW testing that is the turn-off.

>Sorry but if you hold up a mirror and the view is not enjoyable.....guess
>what.

Certainly true for some and much of what appears here.

>There are certainly exceptions but the overall image is very suspect.

Much of what can be done. The simple use of civil
language and staying away from personal attacks
would be a big start.

>The problem is, amateur radio doesn't appear to be one of those
>technical pursuits thanks to the taint of a manual Morse speed
>dominated heirarchy. Instead we find these people migrating to
>amateur computng, to amateur metalworking, to audiophile pursuits,
>to amateur photography, etc. They pursue technical activities, but
>not amateur radio. And that's a shame, because amateur radio has
>a lot to offer this sort of person, and this sort of person has
>a lot to offer amateur radio.

Right on target. I have been in the telecommunications
industry for 30+ years. In the past we had very active
company amateur clubs. Today they are failing because
we can't attract our peers, many who have incredible
talents in the sciences and technical arenas, because
they see the Morse Code as just an unwelcoming barrier
to keep them out. I can't argue with their logic.

>If you want your eyes opened, browse the rec.crafts.metalworking
>newsgroup and contrast what you see there to what you see here.
>There is no sense of caste there. What you see is a large group
>of technically inclined people striving for technical excellence
>and openly helping each other. There is little sense of competition
>or animosity among those at differing levels of the activity.

The same is true in the car collector, hot rod and other auto
related newsgroups. No caste system at all. You bring
your talents, questions and need for knowledge to
those groups and there's a genuine elmering by those
that went before. None however, put down folks that
choose not to get into rebuilding engines or painting
their own car.

>That's the way amateur radio *should be*, but sadly isn't because
>of the formalized caste system under which it operates, and the
>divisions that has fostered (and let fester for the past 29 years).
>Yes, I'm talking about Incentive (to pass faster Morse tests) Licensing,
>and all that has followed from it.

Totally agree again.

Bill Sohl K2UNK
ARRL Local Gov't Liaison, Mt. Olive Township, NJ

The ARRL Letter
Vol. 16, No. 5
January 31, 1997

Circulation/Address Changes: Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial: Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

IN THIS EDITION:

* Add your voice to licensing restructure discussion!
* Heard Island DXpedition tops QSO record
* Linenger gets approvals to operate from Mir
* SimSat Project simulates satellites
* Solar inertia
* Don Lucas, W0OMI, SK
* In Brief: Vanity refunds; Hams, CBers cooperate in search; Gulf Coast Ham Convention awards

---

ARRL MEMBERS ASKED TO COMMENT ON LICENSE RESTRUCTURING IDEAS

ARRL members are being invited to add their ideas, comments and recommendations to those of the ARRL WRC-99 Planning Committee, which has suggested sweeping--and potentially controversial--changes to the Amateur Radio licensing structure in the US. On the table for open discussion and debate are proposals that include:

* elimination of the Novice license
* creation of a new Intermediate license to replace the Technician Plus
* expanded HF privileges for Intermediate licensees, including phone on 160, 75 and 15 meters
* a 10-wpm General CW test (with more stringent testing standards for all CW exams)
* expanded phone privileges for General-class and higher licensees

Details of the plan, discussed during the recent ARRL Board of Directors meeting in Albuquerque, New Mexico, will appear in March QST. The Board says it seeks comments from members to ensure that before any plan goes forward, it enjoys broad support from the amateur community. The Board will not act on the issue at least until its July meeting.

After its research revealed that as many as three Novices in four are inactive, the committee concluded that the Novice license is no longer

useful. Although the committee would end the Novice license, its plan provides current Novices with an easy means to upgrade (via an open-book test) to the new Intermediate class license, which would replace the current Technician Plus. All present Tech Plus licensees would become Intermediate licensees. The Basic license would supplant the Technician license--now the hobby's most-popular entry-level ticket--with no changes in privileges. In addition, the committee's plan would phase out the current Novice and Tech Plus bands on 80, 40 and 15 meters, and replace them with new Intermediate-class allocations. The committee's consensus plan for Intermediate-class licensees calls for new CW bands on 80, 40 and 15 meters starting 25 kHz up from the lower band edge, digital and phone-band privileges on 75 and 15 meters and a 50-kHz phone or CW segment at the top end of 160 meters, plus expanded Novice and Tech Plus CW and phone allocations on 10 meters.

According to the proposal, Intermediate CW bands would be 3525 to 3700 kHz, 7025 to 7050 kHz, 21025 to 21150 kHz and 28050 to 28300 kHz. Digital operation was suggested for 3600 to 3625, 21100 to 21125 and 28100 to 28189 kHz. Phone privileges would include 1950 to 2000, 3900 to 4000, 21350 to 21450, SSB from 28300 to 28500 and FM from 29500 to 29700 kHz. Transmitter power for Intermediate-class licensees would be limited to 200 W PEP output (other licensees using these bands would not be limited to 200 W, however).

General-class and higher amateurs also would benefit from the plan, if it's adopted according to the committee's outlines. General-class hams would get additional phone privileges 3800 to 3850, 7200 to 7225, and 21250 to 21300 kHz; Advanced-class hams would add 3725 to 3775, 7125 to 7150 and 21175 to 21225 kHz; Extra-class hams would also have 3700 to 3750, 7125 to 7150 and 21150 to 21200 kHz.

With the exception of 40 meters, where Novice and Tech Plus licensees already have privileges, the committee suggested no changes on the hobby's narrowest and most crowded bands--including 20 meters and the narrow WARC bands at 30, 17 and 12 meters.

The Intermediate CW test would be 5 words per minute (the same as the current Tech Plus requirement), but the committee proposed that the General class CW requirement be set at 10 wpm. There still would be no additional CW exam for the Advanced ticket, nor would there be any change in the 20-wpm requirement for the Extra. Exams for all classes would include a return to a sending test and the requirement for one minute of solid copy during a five-minute test--instead of the current method that tests on the content of the CW text.

Right now, these major changes are only in the talking stage. "Let us be very clear about this," said ARRL Executive Vice President David Sumner, K1ZZ, who characterized the committee's proposals as a starting point for discussion, not a done deal. "The changes are not ARRL policy; nothing has been proposed to, or by, the FCC, and the ARRL Board is committed to making no decision before its July 1997 meeting." Sumner said there is no timetable to complete the process. Only after there is an opportunity for in-depth consideration and discussion by the membership will the ARRL Board consider

taking the next step--to approach the FCC with a rulemaking proposal--a process that automatically invites additional comments and suggestions.

Between the time they receive March QST and May, members are asked to voice their opinions on the committee's suggestions to their directors, whose postal and e-mail addresses are listed on page 10 of QST. All suggestions and comments--positive and negative--are welcome.

VK0IR BREAKS DXPEDITION QSO RECORD! ARE YOU IN THE LOG?

The VK0IR Heard Island DXpedition is one for the record books. The DXpedition team left the island Wednesday, January 29, after racking up more than 80,000 contacts--a new DXpedition record. The VK0IR team was scheduled to leave Heard Island today (January 31), but rough weather and high winds (combined with bone-chilling cold) forced an early shutdown. VK0IR hit the bands running on January 14 and didn't stop until January 27--a few days before the DXpedition's scheduled end. The result was excitement on a level rarely seen among the Amateur Radio ranks. Most of the stations worked were in Europe, the Eastern US and Japan. With 80,673 contacts in its logbooks, the widely heralded Heard Island DXpedition appears to have topped the previous record, held by the 1992 4J1FS DXpedition, which racked up nearly 74,500 QSOs in 15 days. (The ZA1A and 3Y0PI DXpeditions tallied 69,500 and 60,000 contacts, respectively.)

On its final weekend, the team began to dismantle some antennas prior to going QRT. A special effort to give the "small pistols" a chance at putting Heard Island into their logs took a back seat to operator safety and equipment security, as the team awaited the arrival of the ship on January 28. Even so, many US operators with very modest stations enjoyed success. One East Coast station reported working VK0IR on 20 meters with just 4.5 W output! The effort might be considered all the more remarkable because it took place during the sunspot minimum.

The Heard Island DXpedition was reputedly the largest, most-well organized and--with a budget of some $320,000--the most expensive DXpedition ever. Last fall, the ARRL Colvin Award Grants Committee authorized a grant of $5000 for the Heard Island DXpedition.

In a sense, the Internet--often thought of as "competition" for ham radio--has been the medium that helped establish a sense of cohesion and community during the VK0IR operation. The DXpedition has heavily employed the Internet to promote the DXpedition and to spread the latest word from Heard--a territory of Australia located in the South Indian Ocean. The DXpedition's 'net presence also offered an opportunity for hams to get a blow-by-blow account of the DXpedition and to post their comments, success stories and gripes. News and pictures of the operation continue to appear in The Heard Island Tribune, edited on-line by Don Greenbaum, N1DG, another of the DXpedition pilots. John Devoldere, ON4UN, moderated the reflector and issued daily postings about the individual operators, changes in frequencies and tips on operating behavior, while the VK0IR home page offered additional general information. Those who worked VK0IR (or thought they had) have used the VK0IR home page to check the DXpedition's logs, which were forwarded via

pacsat to servers in the US and in Europe!

An e-mail note received here at HQ from Jon Jones, N0JK, of Wichita, Kansas, summed up the feelings of many grateful operators: "Thanks to the Heard ops, pilot stations, ON4UN and all the other behind-the-scenes support cast for bringing the magic back to Amateur Radio."

The DXpedition team does plan a brief (one-night) stop at Kerguelen Island on its return trip. It is not certain that any radio operation will take place from Kerguelen, but if it does, Devoldere says it likely will be on the low bands only, and mostly--if not exclusively--on CW.

The QSL address for the VK0IR and the preceding TO0R operation from Reunion Island is INDEXA, c/o W4FRU, Box 5127, Suffolk, VA 23435. QSLs for VK0IR and TO0R should be mailed separately to avoid delays. For more information, check the Heard Island home page at http://www.ccnet.com/~cordell/HI/.

PERMISSION GRANTED FOR LINENGER TO HAM IT UP FROM MIR

US ham-Astronaut Jerry Linenger, KC5HBR, has been granted permission for general QSOs and scheduled school radio contacts with unlicensed students and a control operator.

Getting permission involved approval by authorities in the US, Russia and Germany. Miles Mann, WF1F, Director of Educational Services for the Mir International Amateur Radio EXperiment (MIREX), and Dave Larsen, N6CO, director of the MIREX board, signed an agreement on behalf of MIREX, while Sergei Samburov, RV3DR, chief of the Cosmonaut Amateur Radio Department, signed for the Mir Amateur Radio EXperiment (MAREX), and Joerg Hahn, DL3LUM, international coordinator, signed for the German Space Amateur Funk EXperiment (SAFEX) group, which provided the ham equipment aboard Mir.

The FCC also has given approval for Linenger (and for Astronaut Colin "Michael" Foale, KC5UAC--who takes Linenger's place in May) for general QSOs and third-party traffic with schools, family and friends. Linenger recently arrived on Mir via STS-81.

According to Mann, applications for US school QSOs with cosmonauts are approved by MIREX, based on specific guidelines, before being sent on to Samburov and SAFEX. "The Mir crews have busy work schedules, but our guidelines allow us to arrange--months in advance--school QSOs during crew off hours," he explained. The Cosmonaut Amateur Radio Department gives final approval for all QSOs and reserves the right to cancel at any time. Mir's daily experiments always have first priority over ham radio.

Because Mir crews now include a US astronaut, SAREX and MIREX have begun to work together. Currently the SAREX program has about 80 schools on its waiting list. To get a Mir school QSO application, send a self-addressed, stamped envelope to Educational Activities Department, ARRL, 225 Main St, Newington CT 06111.

A word on random QSOs with the Mir space station: Mir crews make random voice QSOs only during off hours. Do not ask the crew to schedule QSOs, as

they do not have the long-term calendar. The 2-meter Mir frequencies recently were changed: The uplink frequency is 145.200 MHz and the downlink is 145.800 MHz. This change resulted from a recommendation from ITU Region 1 (Europe). Please do not ask the crew about it, as the crew does not set policy on frequencies.--Rosalie White, WA1STO

SIMSAT PROJECT PROVIDES ENTREE TO SPACE

Satellites without rockets. That's one way of describing The Simulated Satellite (SimSat) project at the NASA Goddard Space Flight Center, an education outreach activity developed by Patrick Kilroy, WD8LAQ, an engineer in the Special Payloads Division. Using a small high-altitude weather balloon and Amateur Radio for tracking, SimSat lets students fly experiments to altitudes of 60,000 feet and beyond. The project simulates many of the practices and remote-observation challenges inherent in working with satellites, and it offers a unique, hands-on experience for students elementary and secondary earth-science, physical science, physics and aerospace programs. The experiences gained can be valuable stepping stones into amateur satellites and even future career choices.

SimSat is being developed as an educational and community-outreach program. The growing SimSat volunteer group in the Washington, DC area is comprised of AMSAT members, teachers, NASA Goddard Space Flight Center workers, community business people, sponsors, parents, hams and others.

For more information, visit the new SimSat home page at http://garc.gsfc.nasa.gov/~simsat/simsat.html on the Web. Hams can participate in SimSat activities through the AMSAT-DC communications channel, amsat-dc@amsat.org. To subscribe, send an e-mail message with a "subscribe" request to Paul Williamson, KB5MU, at listserv@amsat.org. Subscribers are encouraged to include their call signs (if any), plus e-mail address and the name of the mailing list, AMSAT-DC.--AMSAT News Service/Pat Kilroy, WD8LAQ

SOLAR INERTIA

Solar seer Tad Cook, KT7H, in Seattle, Washington, reports: This week's bulletin is really the same as last week's. There is just no solar cycle progress to report. Solar flux is still in the low 70s and is expected to remain that way over the next month. Of course, this forecast of low activity is based upon the previous solar rotation, so it only means that there has been no activity over the past month that we can use to predict additional effects when it rotates into view again.

There was a geomagnetic disturbance last week, with the maximum effect on January 28, when the K indices went as high as five and the planetary A index was 21. Based on this we could see some unsettled conditions again around February 23. The lack of sunspots has been disappointing. Most observers expected more activity out of the next solar cycle by now, but this is only based upon activity over previous cycles, so all we can do is wait.

Sunspot numbers for January 23 through 29 were 0, 12, 11, 12, 11, 11 and 16, respectively, with a mean of 10.4. The 10.7 cm-flux was 73.4, 74.2, 73.1, 74.1, 73.5, 72.9 and 74.6, respectively, with a mean of 73.7. Estimated planetary A indices for the same period were 3, 3, 6, 13, 13, 21, and 8, respectively, with a mean of 9.6.

DONALD L. LUCAS, W0OMI, SK

Don Lucas, W0OMI, of Boulder, Colorado, died January 15, 1997, after a period of failing health. He was 68. Lucas was among the group of scientists who developed the IONCAP HF propagation program for the US government, and was the guiding light behind the development of CAPMAN, a "ham-friendly" descendant of IONCAP. He was a pioneer in computerized propagation applications and an author of many publications of the Institute for Telecommunication Sciences. More recently, he was associated with Lucas Consulting. A former US Navy radio operator, he was an active amateur, particularly on 160 meters. His wife, Patricia, and four children survive.--Jim Headrick, W3CP; Dean Straw, N6BV

IN BRIEF:

* Vanity refunds: Vanity refunds from unsuccessful first-day Gate 2 filers (processed on November 4, 1996) have begun to arrive in mailboxes. Refund checks are being mailed from the US Treasury in San Francisco. Those whose vanity applications have been dismissed by the FCC because their call sign choices had already been assigned must apply in writing for a refund of the $30 application fee.

* Hams, CBers cooperate in search: Some three dozen radio operators--primarily from the amateur and CB ranks--cooperated early this month as part of a massive, but unsuccessful, search for a missing woman in Bexar County, Texas. Four ham clubs were represented, plus two REACT Teams, a volunteer fire department and some individual CBers. Command posts located 20 miles apart were able to use the same repeater, so searchers were able to communicate using 2-meter HTs. Meanwhile, the pilot of an ultra-light plane used CB channel 14 to communicate to a roving command vehicle driven by KK5ZP, who had both CB and amateur capabilities. Radio clubs involved in the search--which crossed many former "turf" barriers--included the Alamo Area Radio Organization, Radio Operators of South Texas, San Antonio Repeater Organization and San Antonio Radio Club. The REACT Teams were Bexar County REACT #4950 and Comal County REACT #4804.--Lee W. Besing, N5NTG

* Gulf Coast Ham Convention awards: The Gulf Coast Ham Convention hopes to issue awards in three categories at the 1997 Science Engineering Fair of Houston on April 5, 1997. The purpose of the award is to promote Amateur Radio and the advancement of the hobby through experimentation and implementation of different modes of communication. There will be one award in each of the three divisions (Junior, Ninth Grade and Senior) consisting of a plaque, a calculator and admission to the 1997 Gulf Coast Ham Convention on October 17-19, 1997, for the winner and his or her family. Winning projects must be related to communication (such as HF, VHF, UHF, microwave, laser, amateur TV or satellite). To be considered for the award,

the entrant must have an FCC Amateur Radio license. If no licensed amateur displays a project in a division, that award will not be given. The Gulf Coast Ham Convention Inc. promotes a convention in Houston every year. For more information, set your browser to http://www.clarc.org/~gchc or contact: Bruce Paige, KK5DO, vice president, Gulf Coast Ham Convention Inc, tel 281-933-8385, ext 201.

TRASH & TREASURE SALE
Because the last Sunday in January fell on Australia Day this year, the January Trash & Treasure Sale is being held today. As usual sellers are admitted at 12 noon to set up their stalls, and buyers can come in at 1pm. Also, Aub Topp VK2AXT tell us that at 2pm there will be a tray of valves and an old radio chassis for sale to the highest bidder.

VK2WI AND WYONG FIELD DAY
A reminder that there will be no morning broadcast on Sunday 23rd February (the broadcast team will be up at the Central Coast Field Day at Wyong.) Instead, there will be a VK2WI broadcast on Saturday 22nd February, at a time to be announced.

NEW DIVISIONAL OFFICE HOURS
Until further notice, the office will be closed on Monday evenings. Opening hours on Saturdays have been changed; the office will now be open on Saturdays from 9am to 12 noon.

DIVISIONAL ELECTIONS
The Elections for the 1997-1998 Council of the Wireless Institute of Australia New South Wales Division will be held in association with the Annual General Meeting on the 19th April 1997.
Nominations for the council are now open and they will close at 12 noon on Saturday 8th March 1997. The Divisional Office will be open that day as well as it's normal opening hours, which will be given elsewhere in the broadcast.

Nomination forms are NOW available from the Divisional Office.

A special note for members:
Only ordinary members and honorary life members are eligible to vote in the forth coming ballot. Associate members are not eligible to vote in the ballot. An ordinary member is one who holds a "Certificate of Proficiency" of any level. An associate member, is one who does not hold such a "Certificate of Proficiency" - commonly called a shortwave listener.

So any members who have doubts about their membership status are invited to contact the Divisional Office to confirm their membership status.

The Office's telephone number is (02) 9689-2417

The office's fax number is (02) 9633-1525

The Office's free call number is 1800 817-644

The Divisional Office's address is
109 Wigram Street Parramatta
P.O. Box 1066 Parramatta N.S.W. 2124

--Peter O'Connell VK2EMU, Divisional Returning Officer

DIVISIONAL EXAMINATIONS
The next examinations will be held at Amateur Radio House Parramatta on Sunday 16th February 1997. Candidates who have lodged applications are requested to report at 12 noon, and the exams will start as soon after that time as possible, but no later than 12.30 pm.

Please apply to the office for the necessary forms. Applications close on Thursday 6th February. Acceptance cannot be guaranteed for any applications received after that date.
-- Eric Fossey VK2EFY Divisional Secretary.

The next Dural Committee meeting will be held next Sunday, 9th February, at VK2WI following the morning callbacks

WICEN NEWS
The Central Coast Amateur Radio Club Field Day, the biggest event of its type south of the equator, will be held on Sunday 23rd February, at Wyong Racecourse. Naturally, WICEN will have a display, in order to demonstrate the community value of Amateur radio, and both ideas and bodies are sought. If you can volunteer either or both, then please contact the Management Committee.

On Saturday is the Management Committee meeting, to be held at Burwood SES. This is also the deadline for the next newsletter, so if you have an idea that could be of interest to others, or perhaps a story to tell, then please put quill to parchment (or fingers to keyboard). The other event this month is of course the Field Day, for which both ideas and bodies are sought.

Next month sees the Central Coast meeting, on the 14th March. This is followed by the Wyangala Triathlon, in the Orange area, to be held on

Sunday 16th March; enquiries are directed towards Robert VK2ZRJ. We expect to have further details in later broadcasts. Following this is the VRA Mid Year Conference, at Wombeyan Caves, on the weekend of 22nd-23rd March.

Events further away include the Watagan Mountains Car Rally, over the weekend of 19-20th April, for which Andy VK2XRX is the contact; around 20 people are required for this exercise. Later on is the Hawkesbury Emergency Expo, run by Alan VK2YYJ, over 16th-18th May; the Hawkesbury Classic Paddle is organised as usual by Kevin VK2CKD over 18th-19th October and the annual Bungonia Cave Rescue will be on the weekend following, over 25th-26th October.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If there are any other regular nets then we'd like to hear about them.

WICEN (NSW) has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It is generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics, and contains pointers to many emergency-related pages likely to be of interest. -- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

DX NEWS

SABLE ISLAND, CY0. Wayne VE1CBK, will be active as CY0SAB from 1200z and after 2000z on the usual DX frequencies, as well as 17 through 10 meters. He will also try to be active for as many RS12 satellite passes as possible.

PHILIPPINES, DU. Dave DU/W1DV will be active, primarily on CW, from Manila for the next two years. Dave is a missionary with Grace Bretheren Missions.

CAMBODIA, XU. Robert KE2FB, is with the US Embassy, and is active as XU2FB. He works 80 through 10 meters, using CW, SSB, RTTY, and FM on 10 meters.

BANGLADESH, S2. Listen out for S21ZX and possibly S21XY in Dhaka from today, on all HF bands, although emphasis will be on the low bands. CONGO, TN. TN6X, and will be active until Tuesday on 160 through 10 meters, using SSB and CW.

TURKS AND CAICOS ISLANDS, VP5. VP5/N9CK will be active from February 4 to 11. Activity will be mainly CW and RTTY. He will also be QRV during the WPX RTTY contest using the callsign VP5CK.

ST. PETER AND ST. PAUL ROCKS, PY0S. will be active from
Wednesday, February 5. Activity will be on all the usual DX frequencies,
with ZY0SK using SSB and RTTY, and ZY0SG on CW.

--condensed from American Radio Relay League DX Bulletin 7, dated
30th January, 1997

VK0IR BREAKS RECORD
The VK0IR Heard Island DXpedition is one for the record books. The team
left Heard island on Wednesday, having made more than 80,000 contacts--
a new DXpedition record.

Most of the stations worked were in Europe, the Eastern US and Japan.
With 80,673 contacts in its logbooks, the widely heralded Heard Island
DXpedition appears to have topped the previous record of nearly 74,500
QSOs in 15 days during the1992 4J1FS Dxpedition.

The Heard Island DXpedition was reputedly the largest, most well organized
and--with a budget of some 320,000 dollars--the most expensive
DXpedition ever.

In a sense, the Internet--often thought of as ''competition'' for ham radio--
has been the medium that helped establish a sense of cohesion and
community during the VK0IR operation. The Dxpedition has heavily
employed the Internet to promote the DXpedition and to spread the latest
word from Heard--a territory of Australia located in the South Indian Ocean.
The DXpedition's 'net presence also offered an opportunity for hams to get
a blow-by-blow account of the DXpedition and to post their comments,
success stories and gripes.

The DXpedition team does plan a brief (one-night) stop at Kerguelen Island
on its return trip. It is not certain that any radio operation will take place
from Kerguelen, but if it does, it likely will be on the low bands only, and
mostly--if not exclusively--on CW.
-- from American Radio Relay League DX Bulletin 6, 29th Jan, 1997

CLUB NEWS

The first meeting of the Radio Veterans Group for 1997 will be held, Deo
Volente, on thursday, 20th February, from 11am to 2pm, at Amateur Radio
House, 109 Wigram Street, Parramatta.
-- Franklyn Pain VK2DYP

FAR SOUTH COAST ARC
The Annual General Meeting of the Far South Coast ARC at Bega will be
held on Sunday 2nd March commencing at 11:00 local. Location of the
meeting is at the home of VK2DRP David, same location as last year.
Anyone wanting information please ring VK2US Ken Bell, President
FSCARC (064) 923-060 after 19:00 local or (019) 449 048 anytime during
the day.
All amateurs and their spouses are welcome, please bring a friend.
-- Regards Ken VK2US President Far South Coast ARC

RADIO AMATEURS OLD TIMERS CLUB
Members and friends of the Radio Amateurs Old Timers Club are reminded
that the next series of broadcasts and call backs will take place on Monday,
3rd February

Times and frequencies will be as follows:
10am "Melbourne time" (2300 hours Zulu) on 145.700 MHz FM,
7.060 MHz LSB and 3.650 MHz LSB

12 noon "Melbourne time" (0100 hours Zulu) on 14.150 MHz USB
beaming north from Melbourne

1pm "Melbourne time" (0200 hours Zulu) on 14.150 MHz USB
beaming west from Melbourne

8:30pm "Melbourne time" (1030 hours Zulu) on 3.650 MHz LSB for
the benefit of members and friends who, for whatever reason, are
unable to hear any of the morning transmissions.

Callbacks will follow all six transmissions. News for inclusion in the club
broadcasts will be welcomed by Club Secretary Arthur Evans VK2VQ or
Allan Doble VK3AMD, both of whom are OK in any call book.
-- Arthur Evans VK3VQ

AUSTRALIAN AMATEUR TELEVISION CLUB
THE NEXT MEETING OF THE A.A.T.C. Inc WILL BE HELD AS USUAL
ON THE 2ND SUNDAY OF THE MONTH IN FEBRUARY AT 109
WIGRAM ST. PARRAMATTA 1.00 PM

SPECIAL NOTICE TO ALL MEMBERS THE NEW 23cm ATV/SATELLITE
rx WILL BE AVAILABLE IN LIMITED NUMBERS, THIS HAS FULL TWIN
CHANNEL DEMOD THE NEXT BATCH WILL NOT BE AVAILABLE
UNTIL WYONG, S0 BE EARLY !!!

THE TECHNICAL DISCUSSION WILL BE ABOUT THE NEXT RX.
ALSO A CHIT CHAT ABOUT THE NEW STANDARD TO BE ADOPTED
IN THE CLUB REGARDING ATV ON THE INTERNET, RE USA, U.K,
EUROPE ETC. COMMENTS ARE WELCOME, TO GET A STANDARD
ORGANISED. (WHERE ARE YOU CADE ?)

WYONG TO BE DISCUSSED, FORMAT, TIMINGS, MANNINGS ETC.
THIS MEETING 1S AS USUAL OPEN TO ANY PERSON (OR
AMATEUR) INTERESTED IN AMATEUR OR SATELLITE T.V.
NOTE: WYONG IS ON FEB 23 1997, 3 WEEKS AWAY - BUT WHO's
COUNTING.

FOR MORE INFORMATION ABOUT ATV. CONTACT BOB THE
PUBLICITY OFFICER ON (02) 9587-3491 DURING NORMAL CIVILISED
TIMES.
--A.A.T.C. Inc. Publicity Officer Bob Barnes

VHF DX GROUP
THE VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE
VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO
PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR

GENEROUS ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE.
VHF DX GROUP MEETINGS ARE HELD ON THE THIRD TUESDAY OF
EVERY SECOND MONTH. THE FIRST MEETING OF THE GROUP
FOR 1997 WAS HELD LAST TUESDAY, JANUARY 21 AT AMATEUR
RADO HOUSE, PARRAMATTA.

AT THE MEETING WE DETERMINED OUR ACTIVITY PROGRAM FOR
1997, AS FOLLOWS:
MARCH LECTURE ON AIRCRAFT ENHANCEMENT PROPAGATION
MAY WORKSHOP ON TEST EQUIPMENT AND CONSTRUCTION TECHNIQUES
JULY FILTER CONSTRUCTION
SEPTEMBER COMPONENTS AND PARTS SOURCES AND PROCUREMENT
OCTOBER TO BE ADVISED
DECEMBER TO BE ADVISED

AT THIS YEAR'S WYONG FIELD DAY THE GROUP WILL BE PUTTING
ON A ONE HOUR SEMINAR ON VHF DX ACTIVITY IN NSW. WATCH
THE WYONG FIELD DAY ANNOUNCEMENTS FOR FURTHER DETAILS.

DON'T FORGET THE TUESDAY ACTIVITY NIGHTS ON 144MHZ AND
THE GROUP'S SUNDAY MORNING NET ON 146.550 MHZ FM AT 11.00 AM.
--SUBMITTED ON BEHALF OF RICHARD SOULIE, VK2ARS

THE ILLAWARRA AMATEUR RADIO SOCIETY WILL BE STARTING 35
YEARS AS AN AMATEUR RADIO CLUB THIS YEAR.SO IF YOU HAVE
NOT BEEN TO A CLUB MEETING FOR SOMETIME .WHY NOT COME
ALONG TO THE FEBRUARY 11TH MEETING AND MEET SOME OLD
AND NEW FRIENDS.THE MEETING WILL START 7.30PM S.E.S
BUILDING MONTAGUE STREET NORTH WOLLONGONG,YOU COULD
BE THE WINNER OF A D.V.M. AFTER THE MEETING THERE WILL BE
A CUPPA AND RAG CHEW.IF YOU WOULD LIKE MORE
INFORMATION ON THE CLUB OR WISH TO RE JOIN GIVE BRIAN A
CALL,AFTER 4:30PM MOST DAYS,ON 042 672296 OR COME UP ON
THE CLUBS HAVA CHAT NET MONDAY NIGHTS FROM 7:30PM ON 146850.
--BRIAN VK2UBF I.A.R.S PUBLICITY OFFICER.

HORNSBY & DISTRICTS ARC.
Well the open night has passed, and from our observation, it was a
success, at one stage I counted 140+ an earlier count 110, and an
estimated 40 percent non Amateur Operators.

The members would like to thank all those that braved the inclement
weather, and the Amateurs who drove some up to 70 Km. We certainly
hope you enjoyed it as much as we enjoyed putting the night on.

The training classes will commence on the 13th Febuary 1997 in a hall at
the corner of Palmerston Rd. & Burdett St. opposite the Hornsby Hospital.
For more information phone Tony VK2BTL on 9487 3383.

The next meeting of the Club will be an informal get together on the second
Tuesday of Febuary 11th. There is nothing planned for this meeting, but
visitors are always welcome.

Should you wish to know more about the Club, or its activities, please write to :- H.A.D.A.R.C at Post Office Box 362, Hornsby 2077, or contact the Publicity Officer, John on 9807 2490.

Remember the Club Net is on Monday nights at 8.00 pm on VK2RNS. The frequency is 147.250 with a positive offset. Why not join in? All are welcome. Listeners set your scanner to 147.250.
--John W Turner VK2WRT-Publicity Officer.

GLADESVILLE NEWS
The first meeting of the Gladesville Amateur Radio Club Inc. for this year will be held on Monday week - the 10 th February at 7.30 pm, at the usual venue, Number One, Birdwood Avenue, Lane Cove. Visitors are most welcome and car parking is available opposite the venue.

During your busy schedule at the Central Coast Field Day set aside a few minutes to drop by the Gladesville stand to say hello or to inquire about our video tape lectures.

Contact with Gladesville can be made by mail to PO Box 48 Gladesvllle 2111 or by telephone to 02 9427 0530 [repeat]

A reminder that the Test Transmissions from Television Gladesville are from 7.30 pm Wednesday and 7 pm an Friday and Sunday.
-- Keith VK2ZZO - President / TV co-ordinator

CW OPERATORS' ORP CLUB INC.
Listeners to this Broadcast will probably be aware that the CW Operators' QRP Club is a Club for those people interested in the CW mode and in home--brewing of equipment From time to time the Club conducts Scrambles or Sprints, to see how many contacts can be made in a given time limit.

This year it has been decided to hold these Scrambles on the 80 metres band on the third Thursday of each month, with occasional use of other bands on the fourth Monday.. All CW operators, irrespective of speed capabilities, are cordially invited to come up on 80 metres, using 3530 kHz as a centre frequency, on the 20th February and again on the 20th of March, for- one hour, starting at 0930 UTC.

In addition to these two dates, there will be a Scramble on 40 metres, using 7028, as a centre frequency, on Monday, 24th February, -also at 0930 UTC for one hour.

Please note these dates now in your diary and join in.
Your participation will be very much appreciated by the Club members, as will your sending of a log of your contacts to lan Godsil, VK3DID, QTHR.
--Ian VK3DID, Awards & Contests Manager, CW Operators' QRP Club

COMING EVENTS
Trash & Treasure Sale (postponed from January).....Today
Applications for Divisional examinations close.....Thursday
Blue Mountains ARC meeting.....Friday
Dural Committee meeting.....next Sunday

Sydney six- and seven-digit numbers stop working (make them eight digit numbers by adding ⍰9⍰ or ⍰91⍰ in front).....next Sunday

Summerland ARC Annual General Meeting.....next Sunday
Gladesville ARC meeting.....10th
Illawarra ARS meeting.....11th
Hornsby & District ARC meeting.....11th
Hornsby & District ARC classes begin.....13th
Blue Mountains ARC Fox Hunt.....14th
Divisional examinations.....16th
Australasian Communications & Computing Ass'n meeting.....17th
Fishers Ghost ARC Annual General Meeting.....18th
Waverly ARS meeting.....19th
Manly-Warringah Radio Society lecture night.....19th
Radio Veterans meeting at Amateur Radio House, Parramatta.....20th
CW Operators QRP 80m Scrambles.....20th
VRA mid-year conference at Wombeyan Caves.....22nd-23rd
VK2WI Saturday evening broadcast.....22nd

Central Coast ARC Field Day at Wyong (NB: no VK2WI morning broadcast).....23rd

If you would like to submit a news item for inclusion in the weekly broadcast, please send it to us by one of the following means:

by post to the Divisional Office, PO Box 1066, Parramatta NSW 2124;
by fax to (02) 9633-1525;
by packet radio to BCAST@VK2WI.NSW.AUS.OC, or
by Internet e-mail to wiansw@sydney.dialix.oz.au

Please note that the deadline for news items is 2pm on the Friday preceding the broadcast; if submitting news items by packet or internet, please allow for forwarding delays in the network.

If submitting printed copy, please:
submit your news item on A4-size paper;
double space your text;
write on one side of the paper only, and
use a plain font such as "Arial" or "Helvetica", 12-point or larger. This is especially important if sending your news item by fax.

(And the bit I wish all club publicity officers would read:)

Please avoid using abbreviations and shorthand, check your spelling, grammar, and punctuation, and use the exact words you wish the announcer to say on-air. Remember, the more care you take in preparing your news item, the better the announcer will read it.

Jerry,

IRCI still sells Icom accessories, especially some extremely good
after-market filters. They also sell back issues of the newsletters,
but it is no longer published. Adam Farson, AB4OJ, used to write an
occaisonal article. He now runs the net on 14.317

Tim is right. But the code isn't needed as part of the initiation
process. If the WARC recommendation
that floated around recently was correct (it included
doing away with Novice), then I must disagree
with that aspect. We need the novice as
an early entry license so youngsters can get
licensed at the ages some do now. Make the
license non-renewable and that should
be fine. If an 8 year old became a novice,
I can't see why that 8 year old couldn't upgrade
at least to tech by his/her 18th birthday.

Didn't QST go to a newstand format (different cover even) recently.
I've seen it in some newstands already. One problem is that the
title: QST means nothing to someone glancing at a magazine rack.
Seems to me the newstand copies need a more obvious title
that readily identifies the publication as being amateur radio
related (BIG TYPE FONT).

The World Health Organization estimates that heterosexual sex is the
cause of about 75% of all worldwide AIDS cases: is heterosexuality
then an immoral lifestyle?

As the identities of blood donors are kept secret, I strongly doubt
if anyone knows about the background of Ashe's donor.

> Common sense will tell you that if you get rid of the pre-marital sex,

> no longer have AIDS!

Recreational sex is as old as our species. How do you propose to
"get rid" of it? Profanity-laden postings on Usenet? Sorry, but
I ain't giving up my girlfriend.

Like it or not, people of all flavors are gonna fool around, and common
sense tells me that sex education is vital.

> But, of course, many fags and fag lovers lack common sense. They
> can't even realize that a rectum is meant for things to come OUT
> of... not to put things into....

Uh, did you KNOW that many straight people also do oral and anal sex?
(Sometimes as a form of contraception.) Are you outraged about that
also?

Fred, your langauge is downright vile: "fags and fag lovers",
"fags and fag issues", etc. Do you also resort to publically raving about
"niggers and spics" when arguing against affirmitave action?

Namecalling often generates sympathy for your targets, BTW.

There are many non-hams reading our Usenet messages, and we should all
be aware of the image we are projecting. By all means, express your
opinions, but without profanity.

> on antennas?

You bet. And this, in turn, is a reflection of our lack of numbers. There are so few hams nowadays that we are viewed by homeowners' associations as a cranky eccentric exception, rather than as an integral part of any neighborhood. This is why they routinely, without any real thought, add anti-antenna covenants to CC&Rs. You may be sure that they wouldn't do it if we had greater numbers.

So you get into a vicious cycle, fewer numbers, more restrictions, that in turn lead to fewer numbers.

Getting rid of the CW requirement might help us break this cycle and jump-start the HF component of our hobby. But hey, we can't do that. Back in '39 the guys had to take a code test, so obviously we need for newcomers to take one now. Regardless of the fact that Morse Code is completely obsolete, except as a fun recreational aspect of our hobby.

Leigh:

Why on earth would you even try and reason with these sick, hateful individuals? There is *no way* to win. It is like debating with a five-year-old. Not only are they too far gone (probably conditioned through culture to fear and hate anyone who is different from them). They tend to be uneducated, as well as unmotivated and unprepared to succeed, but tend to blame *others* for their failures. ("them damn niggers", "them damn homos", "them damn spicks", "them damn educated types", "them damn Yankees", "them damn Jews", etc...)

This type usually has a hatred for several groups, and undoubtedly, if they look hard enough, you will fall into one of them. It's best just to stay away and let them die off through inbreeding and lack of ability to adapt (read: greatly slowed evolution)

Why else but unmitigated FEAR would they care that gay hams get together, black hams get together, etc, and have to make a huge issue of it?

Dave

2411. GB2RS News 2nd February 1997

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-31 00:00:00 UTC
From: "Dave {Reply address in.sig}" <noone@llondel.demon.co.uk>
Message-ID: <854760969snx@llondel.demon.co.uk>
Source record: 205736
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 2nd of February and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Three new UK microwave distance records have been set recently. We reported last week that Bob Short, G3GNR, worked SM6ESG on the 14th of January over a 1275km path and this is now confirmed as a new UK 10GHz tropo record.

Meanwhile, on 24GHz, a new UK record was established the same day by Petra Suckling, G4KGC, when she worked Arie Dogterom, PA0EZ. The QSO, by tropospheric ducting, was over a distance of 391km. Petra's husband, Charlie, G3WDG, later also completed a contact with PA0EZ over the same distance. A new one-way world record was made when PA0EZ heard weak signals from G3WDG/P over a 425km path, but unfortunately no signals were received from Arie.

On 47GHz, a new UK record was set on the 14th of December, when G4KNZ/P worked G3FYX/P located near Bristol, 41km away.

Congratulations to all the operators concerned.

The VK0IR DXpedition to Heard Island in Antarctica is now history. According to the RSGB DX News Sheet, the group made in excess of 80,000 contacts before they closed down on Monday the 27th of January, a figure which is believed to be a new record number of contacts for a single expedition.

Subscription Services Limited, SSL, is to withdraw standing order as a payment method for new licensees. This will not affect current licensees who have chosen to pay for the renewal of their licence by standing order. The decision follows a growing trend, with many organisations removing standing order completely.

City and Guilds have issued reports on the results of the December 1996 Radio Amateurs Examination and Novice Radio Amateurs Examination. Anyone requiring a copy should send a 20p SASE to Lynnette Ranger, 2E1EKT, at RSGB HQ, specifying which report is required.

In order to encourage experimentation and exchange news, views and technical information on the 73kHz band, an 80 metre net has been established. It is on 3673kHz at 9.00am local time on the 1st and 3rd Saturdays of each month.

There is a vacancy on the VHF Contests Committee. Any RSGB member who is interested should contact VHFCC Chairman Steve Thompson, G8GSQ, at PO

Box 2399, Reading, RG7 4FB, or call him on 0118 982 0848 during the evenings or at weekends. His E-mail address is g8gsq@blacksheep.org

An American film crew has been filming at the shack of Roy Clayton, G4SSH, the RSGB Chief Morse Examiner, during the week. They are covering a story on the use of Morse code by radio amateurs following the decision by French coastal stations to close their Morse service. The programme will be broadcast on NBC Superchannel on satellite and cable around 0800UTC tomorrow, Monday the 3rd of February.

The RSGB is holding an Open Meeting next Saturday, the 8th of February, in the Hertford Suite, Forte Posthouse, Belfast, situated on the A1, one mile south of Dunmurry. The meeting is open to all with an interest in amateur radio and there is no admission charge. In addition to the President of the RSGB, the presidents of the Irish, German, Dutch, Belgian and French national societies are expected to be there, as will the RSGB General Manager, Peter Kirby, G0TWW; RSGB voluntary officers; and a representative from the Radiocommunications Agency's Radio Investigation Service. The meeting will be followed at 7.30pm by a dinner and the installation of the 1997 president, Ian Kyle, GI8AYZ. Tickets for this event, which again is open to all, should be obtained in advance from Mrs Fay Huxley, 2E1EUA, at RSGB headquarters on 01 707 659 015. Details of both events appear on page 9 of the January 1997 RadCom.

The RSGB National VHF Convention takes place on Sunday the 16th of February at its usual venue, Sandown Exhibition Centre at Sandown Racecourse. Full details, including a timetable of the two lecture streams, a list of the exhibitors, and a floor plan can be found in the February RadCom, which was posted to all RSGB members last week.

Now some items of HF DX news from the weekly RSGB DX News Sheet, edited by Chris Page, G4BUE:

From Congo, Baldur, DJ6SI, is currently active as TN6X on CW only, all bands. He is expected to leave on Tuesday the 4th of February.

From Saint Peter and Saint Paul Rocks, the two-to-three-week long Brazilian operation is now due to start on Wednesday the 5th of February. The callsigns will be ZY0SK on CW and RTTY, and ZY0SG on SSB.

And from Papua New Guinea, JA3IG will be active as P29VIG from Manus Island, which counts as OC-025 for the RSGB IOTA Awards, from Saturday, the 8th of February for four days. Look for him on 10 to 40 metres on SSB and CW.

Now news of a special event station on the air from Teeside this week:

GB2TB is operating from the Community Centre, the Causeway, in Billingham, from now until next Sunday, the 9th. The station is making contacts on a sponsored basis in order to raise funds for a permanent memorial to the former RAF Thornaby airfield and all personnel who served there. The airfield was closed in 1958 and the site is now a

shopping complex with nothing to indicate that an aerodrome existed.

Next the Rally News:

The Harwell Amateur Radio Society Radio and Computing rally takes place today, Sunday the 2nd of February, at Harwell Science and Engineering Centre, between Oxford and Newbury. The event features traders and a bring and buy stand. Doors open at 10.00am and talk-in is on 2 metres, channel S22.

The South Essex Amateur Radio Society rally also takes place today, the 2nd, at The Paddocks, Long Road, on Canvey Island from 10.30am. The rally features amateur radio, computer and electronics components exhibitors, a bring and buy stand and RSGB Morse tests on demand. Please take two photographs and the appropriate fee with you if you wish to take your Morse test at this rally.

And the Newport Amateur Radio Society Junk Sale is being held at Brynglas Community Centre, Newport, today. Doors open at 10.00am.

Next Sunday, the 9th, the Cambridge and District Amateur Radio Club rally will take place at the Ambulance Station, Addenbrooke's Hospital. Doors open at 10.00am and talk-in will be provided by G8EVY on 2 metres channel S22. For further details please call 01 954 200 072.

Repeater news next:

The 70 centimetre repeater near Bridgend, GB3MG, returned to service on channel RB7 on the 22nd of January.

Now for the contest news:

The final session in the RSGB 'LF' Cumulative Contest is an 80m one, from 1600 to 1800UTC this afternoon, the 2nd of February. Activity is between 3530 and 3580kHz on CW. Novices are particularly encouraged to participate and entrants gain additional points for contacts with Novice stations.

Next weekend, the RSGB 1.8MHz CW Contest takes place for four hours from 2100UTC on Saturday the 8th of February. The full rules of both these contests are in the September 1996 RadCom.

The Dutch PACC contest is also next weekend, from 1200UTC Saturday, for 24 hours and brief rules can be found on page 29 of the February RadCom.

On VHF and UHF, the RSGB's 432MHz Fixed Station and Affiliated Societies Contest takes place today, the 2nd, between 09 and 1500 UTC.

And the third session in the RSGB 70MHz Cumulative Contest takes place next Sunday, the 9th of February, between 1000 and 1200UTC. The full rules of all RSGB Contests during 1997 were published in the September 1996 RadCom.

SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Tango and M1 Bravo Hotel

series, and Novice calls in the 2 0 Alfa Papa and 2 1 Foxtrot November series.

And now the solar factual data for the period from the 20th to the 26th of January 1997, compiled by Neil Clarke, G0CAS:

Solar flux declined slightly from 77 on the 20th to 73 by the 25th and averaged 74 units. The 90-day solar flux average on the 26th was 77, one unit up on last week. This has increased slowly but surely from early July last year when the 90-day average was just 69. X-Ray flux remained at A1 every day. Geomagnetic activity was 'quiet' except on the 26th, when levels increased to 'unsettled', with an Ap index of 13 during the afternoon. The average was Ap 6. Solar wind data for the period from the 13th to the 19th saw solar wind speeds decline from 540 kilometres per second on the 13th, to 300 kilometres per second for the remainder of the period. Particle densities gradually increased from 5 to 20 particles per cubic centimetre. Bz hovered around zero nanoTeslas throughout.

Now the ionospheric data for Central France for the period from the 17th to the 23rd of January. The F2 daytime critical frequencies varied between 5.7MHz on the 17th and the 21st, and 6.4MHz on the 22nd, with an average of 6.0MHz. The darkness hour lows averaged 2.6MHz and varied between 2.2MHz and 3.2MHz. The daytime highs took place between 1000 and 1500 hours, with the darkness hour lows between 0500 and 0700 hours except on the 19th, when they occurred at 2100.

And lastly the solar forecast. This week solar activity is expected to continue at very low levels. Solar flux levels are expected to be in the mid to the high 70s. Geomagnetic activity is expected to be 'quiet' until later in the week when activity could increase to 'unsettled' levels due to a recurring pattern. MUFs during daylight hours for the south are expected to be about 20MHz at equal latitudes and 17MHz for the north. Darkness hour lows are expected to be about 8MHz.

And that's the end of the solar information.

Why is that overstated? It pretty absurd the level to which Part 97
spells out restrictions and for what purpose?

> Leaving all the "code testing is good/code testing is bad" arguments
> aside for this thread, what are your feelings on Lyle's speech?

Sounds like a pretty reasonable approach. Why should the FCC care about
much of what is in Part 97? I've always been amazed at the hair
splitting
the FCC has gone through with respect to trying to define what's a
control point, the control operator, automatic operation, repeater
operation, etc., etc. It seems as though much of it could be boiled
down to a few fundamental rules and leave it at that.

> Should we trash all our current band plans, and say "let the best mode
> win"?

Sounds fair enough to me. Do we really need to have band plans
as complex as they currently are? If any are necessary, then lets
set aside a few segments for certain modes that need protection
and let the rest get utilized as needed.

> Would that encourage technological innovation? Or just foster a "QRO
> war"?

I suspect both and would hazzard a guess as to who'd contribute
to which, but that wouldn't add to the discussion. ;-)

> Would we then REALLY learn how to best share our assigned spectrum, or
> would chaos rule?

How does dividing up the spectrum in bunches of little protected
havens make it best for sharing our spectrum? Already we are
out of synch with many of our neighbors.

> What are your thoughts, (parking sarcasm, flames, and religious fervor at
> the door for purposes of this thread)?

I'd like to see Part 97 distilled down to 4 pages at most, one class of
license, minimal if any band plans, and limitations on emissions that
primarily aid in mitigating interference with other services and other
amateur stations. If it needs to more complex to foster development
and service to the public, add incentives for R.A.C.E.S. membership,
technological development, i.e., have band segments that prohibit
the use of the current modes to force development of better modes, etc.
As it stands, the regulations appear to try to limit experimentation
rather than foster it. This may have been due to the FCC's desire
to be able to monitor amateur transmissions, but since they've stopped
doing that for the most part, those rules just get in the way.

73,
Todd
N9MWB

PS Why is this in rec.radio.amateur.misc too? I've set the followup
on this post to just rec.radio.amateur.policy.

For travel, there is a small atlas type book that has all the repeaters shown on a map of each state, plus Canada and Mexico. Great for traveling since it shows you approximately where the repeaters are geographically. I think even Rat Shack used to sell the Repeater atlas for ~$10.

I'm with you Brian, 2 metres is really good here... any Ham visiting NZ will do well for hospitality if he or she brings a hand-held. If the U.S. gives it away, we'll be next, and if I lose the only band I can legally access in my remote location I'll be left with no option but to invade the U.S.

Well the combined total of generals, advanced and
extras in the USA was almost no growth in 1997
and, as a percent of the total in fact decreased slightly.

> Haven't you noticed that HF is getting more congested?

Not in the major northeast area (PA, NJ, NJ, CT). Even
on weekends I find plenty of available
spectrum on the amateur HF bands.
When I check the novice HF CW segments
on 80, 40, 15 and 10 they are wide open.
Congested??? Not here.

This is one of those statistcal ploys to falsely
create the image that there's nothing of value
(or so little value) with HF vs ALL the rest of
the amateur spectrum. Of course the numbers
change dramatically when you eliminate line-of site
frequencies, and further still if we focus only on
reliable distamce (= to or > 1000miles) amateur
bands.

>3) the development of new and exciting modes on VHF+

Same as #1 above.

>You bet. And this, in turn, is a reflection of our lack of numbers.
>There are so few hams nowadays that we are viewed by homeowners'
>associations as a cranky eccentric exception, rather than as an integral
>part of any neighborhood.

I saw this first-hand at a local mayor's meeting this week
(Rockaway, NJ) where neighbors
of a ham want him to totally cease operation (if they had
their way). When other hams offered the emergency
record of amateur radio in times of hurricane, flood,
etc. the neighbors general reaction was....we don't ever
have them here so we just don't need your emergency
services.

>This is why they routinely, without any real
>thought, add anti-antenna covenants to CC&Rs. You may be sure that they
>wouldn't do it if we had greater numbers.

The CC&R issue is a tough nut to deal with. As a car
collector enthusiast also, the mindest of most homeowner
associations is intolerant of any hobby or activity that
conflicts with the homeowners limited view of what
they want their neighborhood to be. Some go so far
as to banning vehicles in driveways overnight,
forbidding woking on your vehicle in the driveway
and other limitations.

>So you get into a vicious cycle, fewer numbers, more restrictions, that

FOR IMMEDIATE REALEASE

31/01/97 -- The internationally respected ASAPS for Windows HF propagation prediction software package from IPS Radio and Space Services is now available in the United Kingdom. Simon Collings, Radio Communications Consultant has been appointed exclusive UK distributor for this professional MS-Windows package.

The IPS Advanced Stand Alone Prediction System (ASAPS) allows the prediction of communications conditions in the HF radio spectrum. It is based on an ionospheric model developed by IPS Radio and Space Services of the Australian Department of Administrative Services, and CCIR models (CCIR reports 322, 894 and supplement to report 252-2).

For more details of the package, visit:

http://www.sapphire.win-uk.net/prod09.htm

ASAPS is distributed internationally, a full list of distributors serving the different geographical areas of the world is given on the web page.

Simon

2426. US License Examination Opportunities Scheduled 1/31/97 to 4/28/97

Newsgroup: rec.radio.amateur.misc
Date: 1997-01-31 00:00:00 UTC
From: "Bart Jahnke, W9JJ ARRL/VEC" <vec@arrl.org>
Message-ID: <32F25E28.4119@arrl.org>
Source record: 205751

You can Email the ARRL/VEC (or this page's content
administrator) at "vec@arrl.org".

*****>> When viewing this list, if the list appears to be cut
off (stops somewhere in the middle of the state's listings)
try downloading the entire file then viewing it off line.
Some WEB browser programs have exhibited this problem.

****

Have you recently passed your test? Find out your new call sign and/or
license privileges using the following World Wide Web URL (or by using
the phone number shown below):

http://www.ualr.edu/~hamradio/

or look for this link from the ARRL WEB page at

http://www.arrl.org/

At ten (10 days) after the test session call 860-594-0300.

****

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 10 days since you took you examination?

If so, Call ARRL at 1-860-594-0300 (8 am to 9 pm weekdays, eastern time)
to find out. We suggest that you not call the FCC (should you choose to
call the FCC at 1-800-322-1117 during business hours, be aware that their
number is normally busy).

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

****

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether they be for the Reciprocal Permit for Alien Amateur Licensee, Form 610-A; Club/Military-Recreation/RACES station, Form 610-B; or Form 610 for Amateur Operator/Primary Station License. FCC Form 610-R is a computer generated renewal form that will be sent from the FCC (beginning September 1995) to licensees whose license is to expire within 90 days. Form 610-V is the special application for persons seeking a Vanity call sign (see below).

Several FCC forms, including Form 610, are available through the FCC's fax-on-demand service by calling 202-418-0177 (request form "000610" for Form 610, form "006108" for Form 610V).

You can obtain FCC Form 610V along with FCC form 1070V and FCC vanity call sign information fact sheet PR 5000, number 206v) by writing ARRL, 225 Main Street, Newington, CT 06111. You must include an SASE.

Form 610 or other forms, including Form 610V, are also available from the FCC via the internet at:

http://www.fcc.gov/Forms/

or

ftp://ftp.fcc.gov/pub/Forms/

The FCC Forms Distribution Center will accept FCC forms requests by calling 800-418-3676.

****
VANITY CALL SIGNS - SUBMITTING YOUR APPLICATION VIA THE WORLD WIDE WEB

Vanity Call Signs can also be applied for, in the appropriate eligibility Gate, at the appropriate time, by using the following URL:

http://www.fcc.gov/wtb/amradsrv.html

****

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 860-594-0301. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to MCI ID: 215-5052.

****

THINGS TO BRING TO EXAMINATIONS

Bring a photo ID along with a second form of identification (else bring two non-photo forms of ID); bring your original FCC license and a photocopy of your license (if you are currently licensed); bring the original and a copy of any Certificate(s) of Successful Completion of Examination (CSCEs); if necessary, bring a scientific calculator (that does not have the ability to store formulas); bring a pen and two pencils; and be sure to bring payment for the test fee if charged by the VEC.

****

EXAMINATION CREDIT IS AVAILABLE AS FOLLOWS

By presenting an original, current FCC-license, the following exam credit will be conveyed to the applicant by the VE Team:

Novice - Elements 1A and 2
Technician (dated after 2/14/91) - Elements 2 and 3A
(*)Technician (dated before 3/21/87) - Elements 1A, 2, 3A and 3B
Technician Plus - Elements 1A, 2 and 3A
General - Elements 1B, 2, 3A and 3B
Advanced - Elements 1B, 2, 3A, 3B and 4A
Extra - All elements

Footnote:

(*) For grandfather Element 3B credit, only an original license or a copy which was issued on or before 3/21/87 is acceptable by VEs. VECs may be able to allow such credit based upon an original CSCE issued on before that date which shows Element 3 credit for passing the (then) 50 question Technician/General written test. If such documentation has been destroyed, the FCC will itself issue the necessary verification. To obtain such verification, acceptable by all VE Teams and VECs, write to FCC and request a "Letter of Verification of Technician License Held Prior To March 21, 1987". Mail (or fax 717-337-1541) your request to: FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245. If you include reference to a fax number in your reply, the FCC will fax your verification letter to you. Normal turnaround at FCC is 3-5 business days after receipt.

By presenting an original Certificate of Successful Completion of Examination (CSCE), the following credit is conveyed:

* For Technician licensees: A CSCE showing Element 1A, 1B or 1C credit qualifies the holder for Technician Plus HF privileges. The CSCE may have been issued more than 365 days earlier.

* For others: A CSCE issued up to 365 days earlier conveys credit for the element(s) shown as passed. A Physician's Certification on a Form 610 is acceptable by a VE Team for 365 days after the Physician's signature date. Once accepted by the VE Team, assuming the applicant qualifies for a General or Advanced license, a CSCE is issued showing Element 1C (or "Physician's Cert. and Release: 1C") credit is valid for 365 days toward an Extra class

license.

****

LOST LICENSES

If you have lost your license, you can obtain a duplicate by writing to: FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245; indicating that you lost your license and that you are requesting that a replacement license be issued to you. You may fax your request to FCC at 717-337-1541.

****

ACCOMMODATIONS FOR THE HANDICAPPED OR DISABLED

The FCC requires that the administering VEs must accommodate an examinee whose physical disabilities require a special examination procedure. To do so, the administering VEs may require a physician's statement indicating the nature of the disability before determining which, if any, special accommodative procedures must be used.

The VEs may accommodate handicapped/disabled examinees by administering the examination at a place convenient and comfortable for the examinee--even at bedside; for the hearing impaired the Morse code may be sent using flashing lights or a vibrating surface; for the visually impaired, VEs may read or write for the examinee; where warranted, the VEs may pause the Morse code message after each sentence/phrase, or each word, or even after each character to allow the examinee additional time to absorb and interpret what was sent--also the VEs may substitute a sending test for a receiving test where the examinee's handicap warrants.

VE Teams may need advanced notice in order to provide the necessary accommodations to examinees who require them. If you will require accommodations, please contact the VE Team in advance to advise them of your needs.

EXEMPTION OF THE 13/20 WPM MORSE CODE REQUIREMENTS

If you are a severely handicapped or disabled individual and have already passed at least a 5 WPM Morse code examination (or hold a license which meets that requirement), you may be eligible for exemption from the 13/20 WPM Morse code examination requirements. See the back of a current FCC Form 610 for details.

****

The following test session information is provided by the ARRL/VEC for the upcoming eight to twelve week period. For

further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 860-594-0300 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "vec@arrl.org" or via MCI Mail to MCI ID: 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,Zip-code,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC which is coordinating this examination. This single-character designator denotes the VEC as defined below. An "A" (for example) indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not find any examinations listed for your area, you may contact any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
The 1997 test fee is $6.25.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546. No fee.

C = Central Alabama VEC Inc., 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473. The 1997 test fee is $3.00.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-832-6803

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, (n) 301-317-7819 or 301-588-3924

M = The Milwaukee RAC Inc., PO Box 25707, Milwaukee, WI 53225;
414-466-4267.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068-0011; 816-781-7313
The 1997 test feee is $5.00.

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926.
No fee.

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000. The 1997 test fee is $6.00.

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
910-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 423-688-7771. The 1997 test fee is $6.25.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1997 test fee is $6.25.
